

Tuesday, June 24, 2025

Hi friends, happy Tuesday!

After everything that happened overnight, let's take a moment to celebrate peace in the world. Just last night, Trump shared that Iran and Israel have agreed to a ceasefire — the war is considered over.

If all of this holds true, doesn't the morning coffee somehow taste sweeter? The air feels a little lighter too.

Maybe, like so many of us, you've been working hard to build a better future for your family. Or maybe you simply believe that all good things — like love, peace, and hope — should be shared with the same grace and compassion we'd expect from the universe itself.

To all our new and familiar friends, welcome back. I'm so glad you're here and staying connected with our community. This space brings you a range of quantitative strategy services, along with curated market insights and investment knowledge inspired by Dr. Charles H. Sloan's research.

I'm your quant advisor and Dr. Charles H. Sloan's assistant — you can call me Lauren D. Miller. I truly hope this is the start of something meaningful, as we work together to create long-term investment value with purpose.

As one of the most respected Quantitative Think Tank Centers in the U.S., many people ask — what kind of wealth impact can we truly create in the investment world?

First, I invite you to visit our official, secure website:

<https://www.finlogichub.com>, where you can explore detailed insights and get a quick overview of our work.

At the heart of our think tank is Acumeta — a powerful quantitative system founded and led by Dr. Charles H. Sloan. Acumeta has

already reached key milestones, and we're committed to making it even smarter and more adaptive.

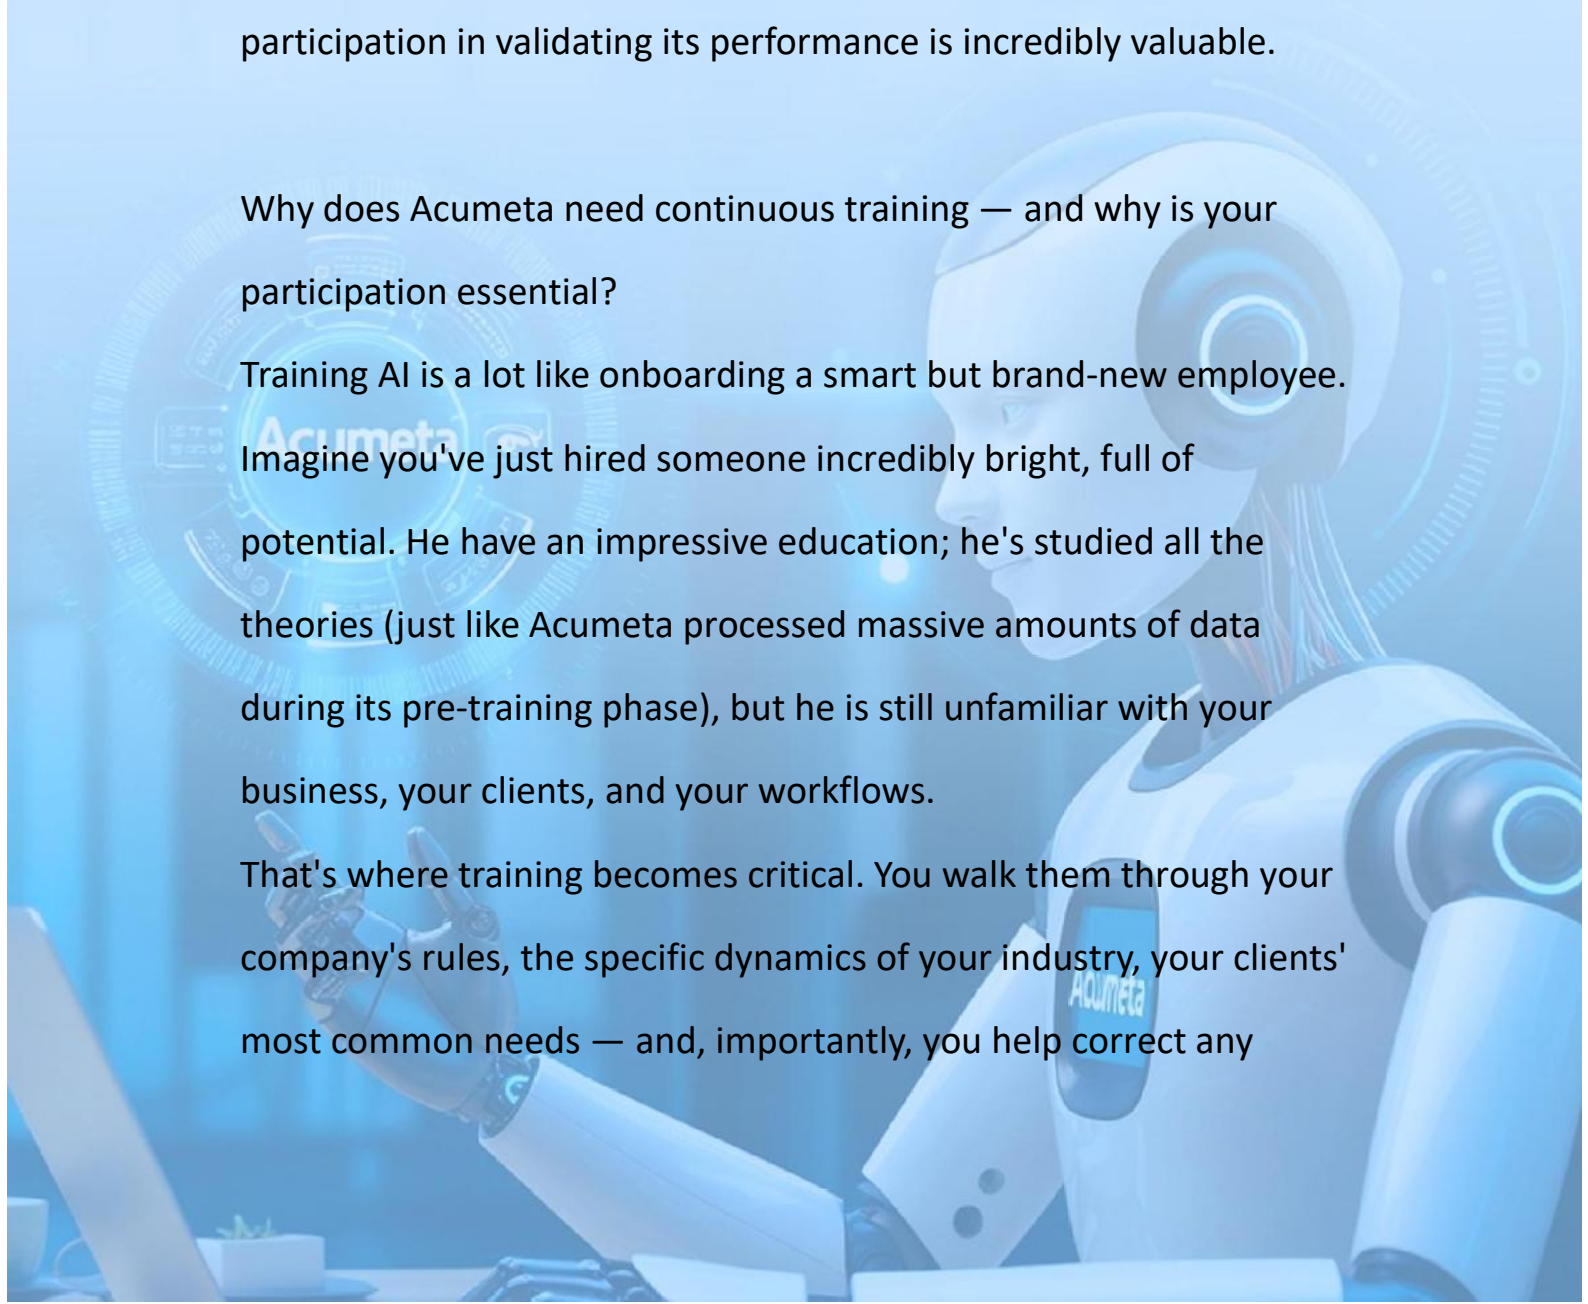

Right now, we're actively training Acumeta to deepen its ability to analyze charts, big data, financial news, policy trends, and capital flows — all with the goal of refining its decision-making and investment response capabilities. It's designed to provide actionable signals across a wide range of markets, including equities, options, futures, cryptocurrencies, and forex.

At this stage, our primary focus is stock market training, and your participation in validating its performance is incredibly valuable.

Why does Acumeta need continuous training — and why is your participation essential?

Training AI is a lot like onboarding a smart but brand-new employee. Imagine you've just hired someone incredibly bright, full of potential. He has an impressive education; he's studied all the theories (just like Acumeta processed massive amounts of data during its pre-training phase), but he is still unfamiliar with your business, your clients, and your workflows.

That's where training becomes critical. You walk them through your company's rules, the specific dynamics of your industry, your clients' most common needs — and, importantly, you help correct any

misunderstandings along the way. That's what targeted optimization is all about.

If you throw them straight into client meetings without that preparation, chances are they'll miss important details — and that could impact your company's reputation.

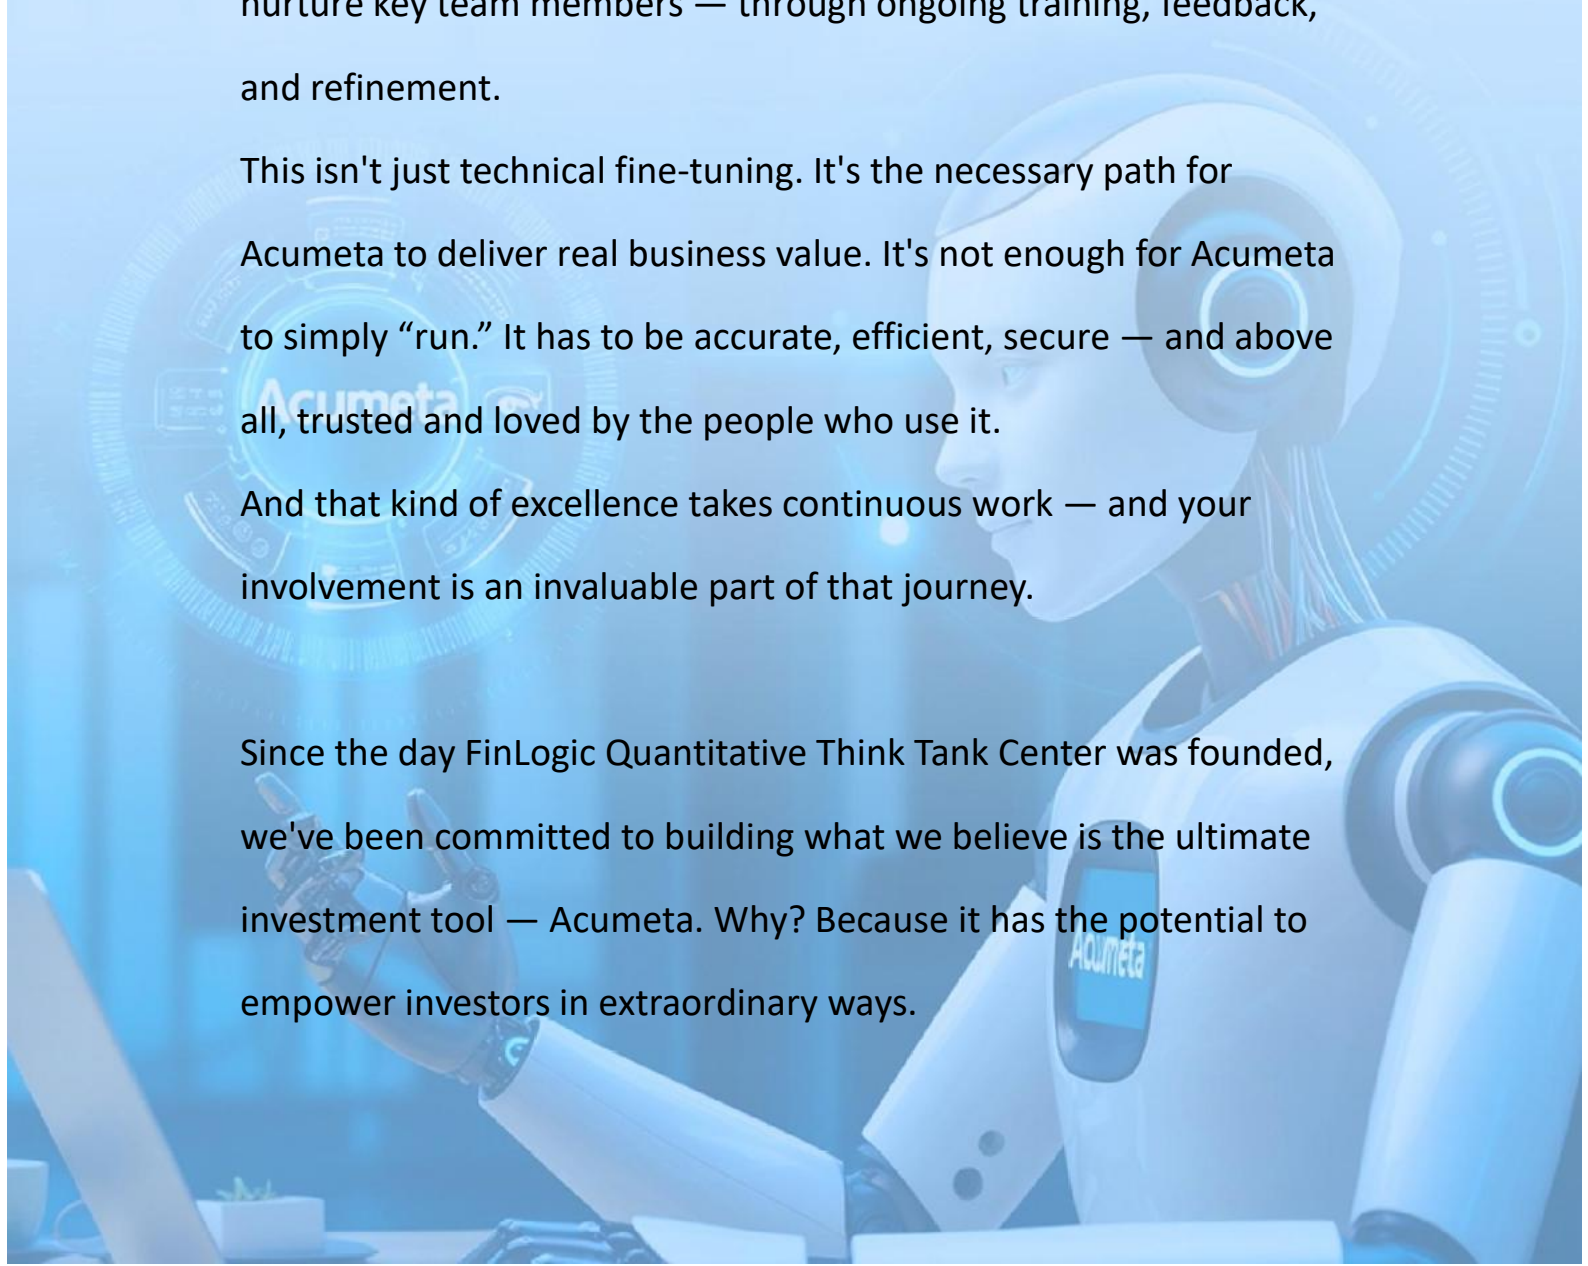

Acumeta isn't a one-off product; it's a continuously evolving digital colleague.

If we want Acumeta to truly understand your business, your customers, and your goals, we have to invest in it the same way we nurture key team members — through ongoing training, feedback, and refinement.

This isn't just technical fine-tuning. It's the necessary path for Acumeta to deliver real business value. It's not enough for Acumeta to simply “run.” It has to be accurate, efficient, secure — and above all, trusted and loved by the people who use it.

And that kind of excellence takes continuous work — and your involvement is an invaluable part of that journey.

Since the day FinLogic Quantitative Think Tank Center was founded, we've been committed to building what we believe is the ultimate investment tool — Acumeta. Why? Because it has the potential to empower investors in extraordinary ways.

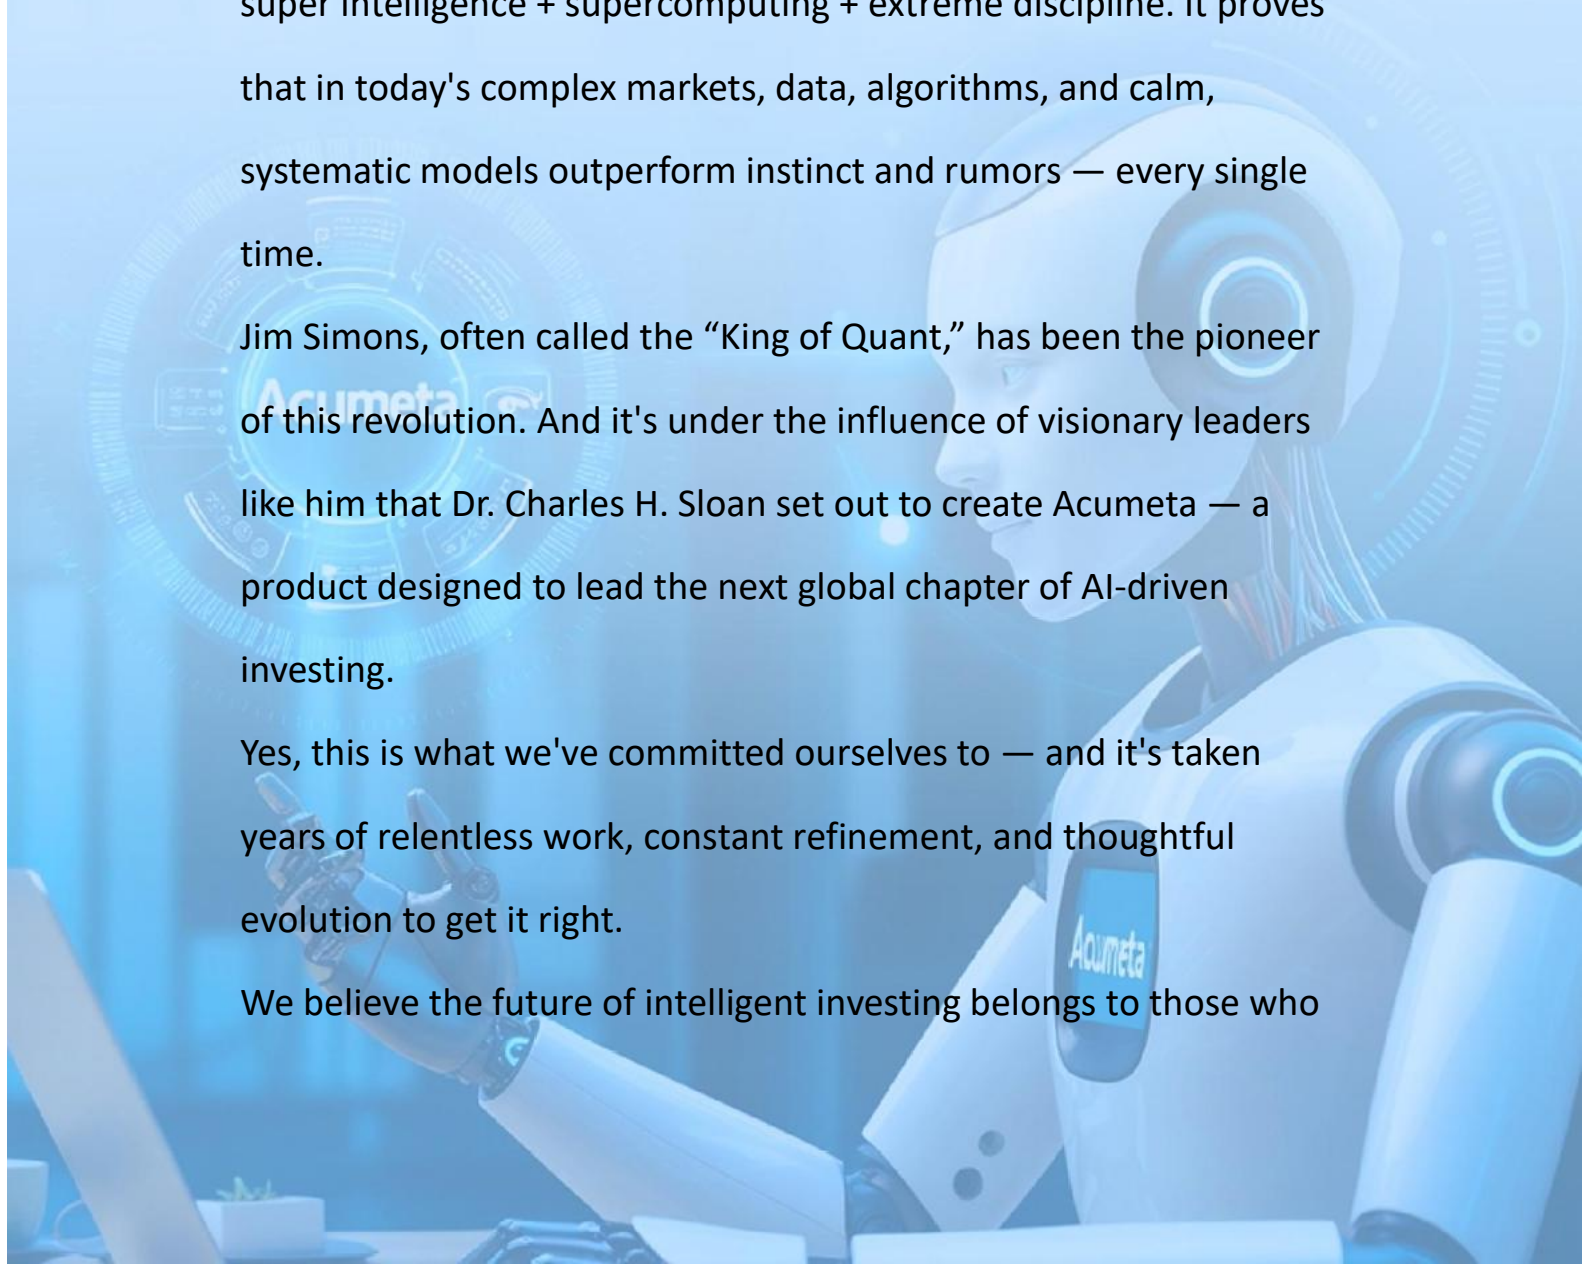

Let's look at a real-world example: the Medallion Fund — a legendary name in the world of quantitative investing. Its performance is almost hard to believe. To put it simply, over the past few decades, it has delivered an average annual return of more than 35% — nearly double the returns of Warren Buffett — and that's after hefty management fees. Over time, that level of compounding growth is nothing short of remarkable.

The success behind the Medallion Fund comes down to one formula: super intelligence + supercomputing + extreme discipline. It proves that in today's complex markets, data, algorithms, and calm, systematic models outperform instinct and rumors — every single time.

Jim Simons, often called the “King of Quant,” has been the pioneer of this revolution. And it's under the influence of visionary leaders like him that Dr. Charles H. Sloan set out to create Acumeta — a product designed to lead the next global chapter of AI-driven investing.

Yes, this is what we've committed ourselves to — and it's taken years of relentless work, constant refinement, and thoughtful evolution to get it right.

We believe the future of intelligent investing belongs to those who

combine technology, discipline, and human responsibility — and Acumeta is our answer to that vision.

So, what kind of high-value experience will you gain by joining us? Through our quantitative strategies and Dr. Charles H. Sloan's in-depth courses, you'll access an investment learning experience unlike anything you've encountered before — grounded in real market strategies designed to help you win.

But more than just performance, what we want to offer you is sincerity and trust.

Our vision for FinLogic Quantitative Think Tank Center goes beyond just seeing our name on the world's biggest screens — though yes, you may have seen us in places like London, Toronto, Tokyo, or Sydney.

What matters even more is that investors like you can achieve meaningful success here — whether it's through U.S. equities, options and futures, or the growing world of digital assets and crypto.

Yes, we are systematically advancing our strategy validation process, and right now, we're focused on testing our quantitative models in the U.S. stock market.

When you join us and actively engage in our courses and discussions, what can you expect to gain?

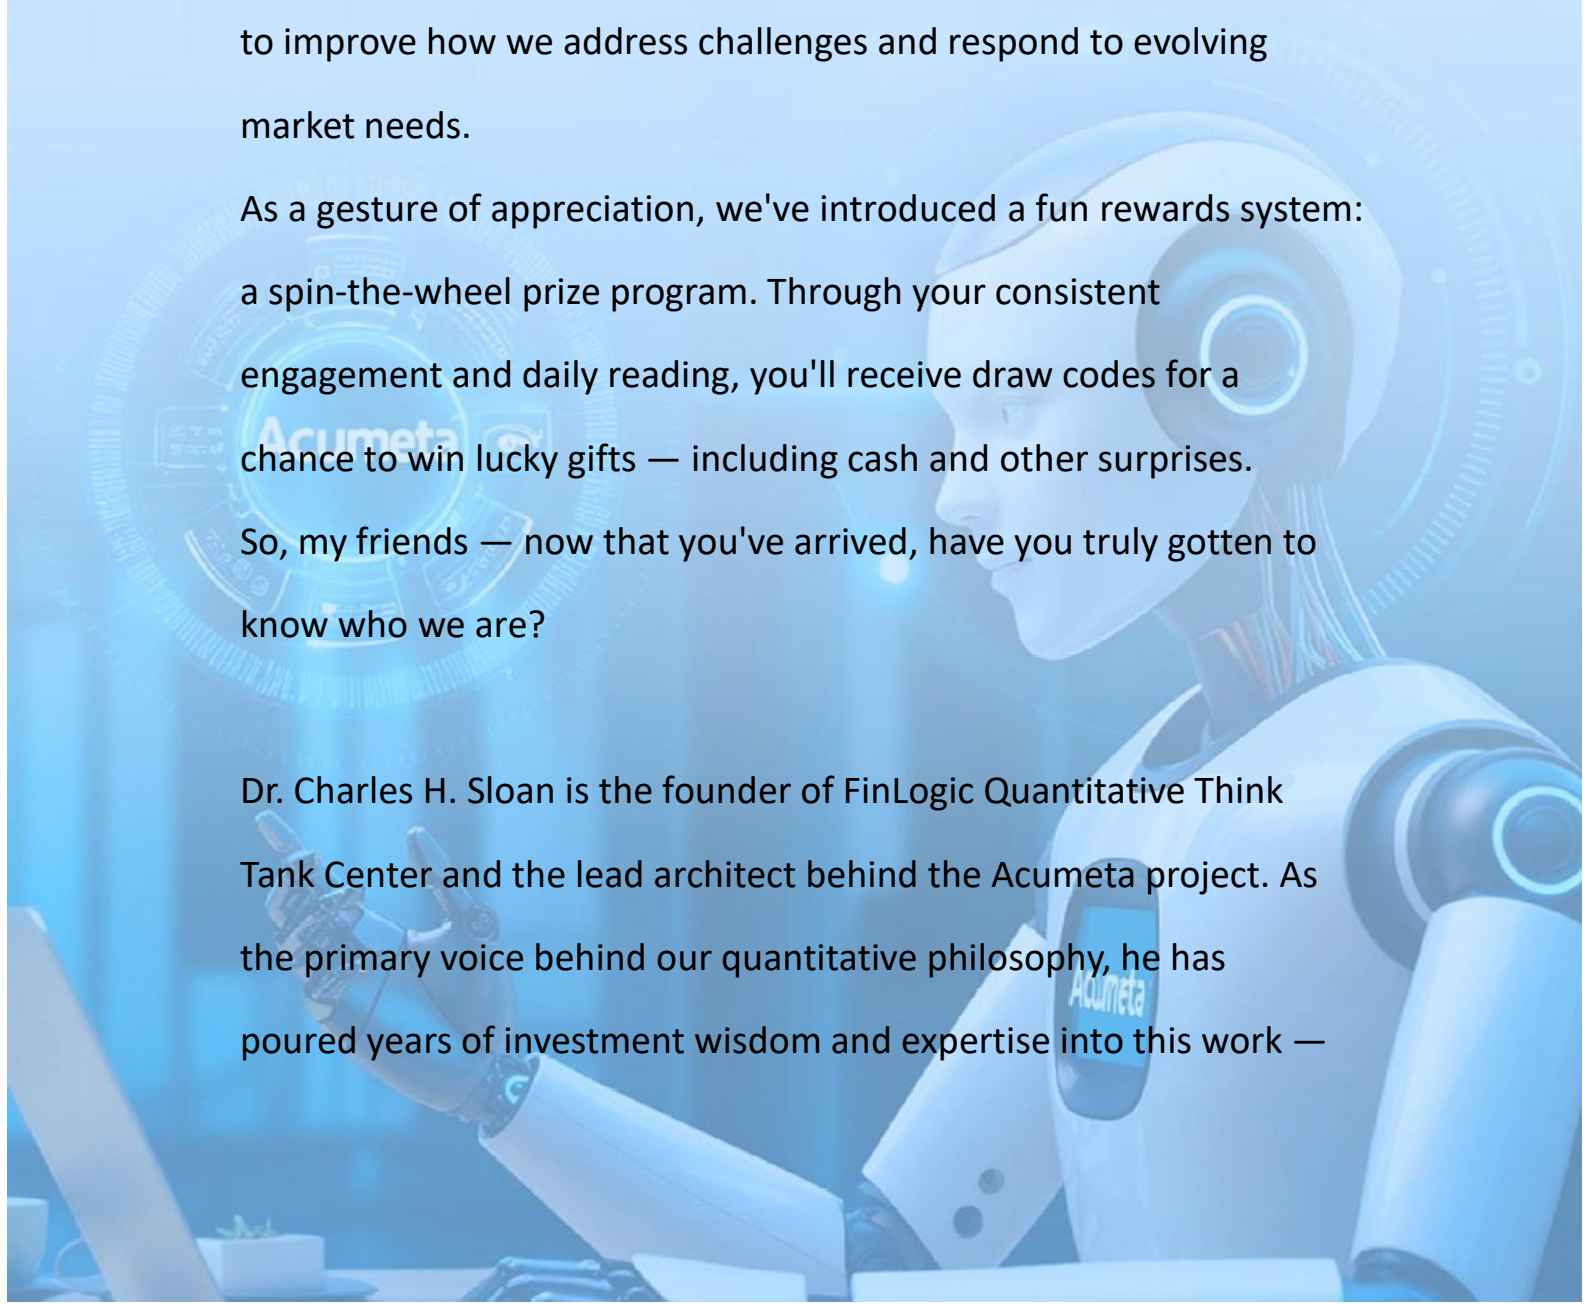

Beyond participating in our stock trading signal, you're also encouraged to share your own perspectives and insights on investing. Your contributions help us continuously refine our quantitative strategies and provide valuable user-level feedback and validation data.

At the same time, we welcome your real-time questions and observations during trading — they give us essential opportunities to improve how we address challenges and respond to evolving market needs.

As a gesture of appreciation, we've introduced a fun rewards system: a spin-the-wheel prize program. Through your consistent engagement and daily reading, you'll receive draw codes for a chance to win lucky gifts — including cash and other surprises.

So, my friends — now that you've arrived, have you truly gotten to know who we are?

Dr. Charles H. Sloan is the founder of FinLogic Quantitative Think Tank Center and the lead architect behind the Acumeta project. As the primary voice behind our quantitative philosophy, he has poured years of investment wisdom and expertise into this work —

FinLogic

with the goal of maximizing AI-driven investment intelligence.

Acumeta's reasoning capabilities and analytical insights are designed to feel human-centric and intuitive.

Charles H. Sloan is a discreet yet highly influential American financial expert with over five decades of investment experience. Known for his precise market insights and innovative trading strategies, Charles has deliberately avoided public exposure, choosing instead to focus on providing advisory services to private investors and small funds.

Educational Background

1973: Earned a Bachelor's degree in Economics from Carlisle College, Pennsylvania, specializing in market behavior analysis and international trade.

1976: Earned a Master's degree in Finance from Midwestern University, specializing in derivatives markets and risk management.

1982: Completed a Doctorate in Business Administration at the Southern California Institute of Finance with a dissertation titled, "Behavioral Economic Analysis of Arbitrage Trading."

1990: Awarded an honorary Doctorate by the New England School of Business for his innovative contributions to foreign exchange market models.

Career Highlights

Charles began his career at a small investment bank in Chicago, where he gained recognition for designing precise options trading strategies. In the 1980s, despite lucrative offers from Goldman Sachs and Morgan Stanley, he chose to serve as Chief Investment Officer at a family foundation, crafting bespoke investment plans for private clients.

Charles has maintained a low public profile throughout his career, as he believes fame can interfere with sound professional judgment. His clientele includes family offices, private equity funds, and high-net-worth individuals. His investment portfolio spans traditional stocks, forex trading, and, more recently, the cryptocurrency space.

Contributions to Cryptocurrency

Charles entered the cryptocurrency space in 2010 as an early Bitcoin investor and later emerged as one of Ethereum's earliest supporters in 2013. He has contributed to the design of technical and economic models for several blockchain projects, always under an anonymous identity. Acting primarily as an advisor, Charles views cryptocurrency as the future of financial technology but stresses that its full potential can only be realized under robust regulatory frameworks.

Forex and Stock Trading Achievements

In the forex market, Charles developed the "Dynamic Volatility Arbitrage Model," enabling investors to capitalize on opportunities amidst market uncertainties. Additionally, he successfully predicted the 1987 stock market crash, helping his clients avoid significant losses.

Reasons for Staying Low-Key

Charles remains out of the public eye, guided by his belief that financial markets are shaped by complex individual decisions and that fame could lead to the misinterpretation of his advice. He prioritizes providing high-quality service to a select clientele rather than cultivating a public persona through media appearances.

About Our Company

Team Overview

At its core, Acumeta reflects Dr. Charles H. Sloan's vision of building a “super think tank” — an advanced, collaborative intelligence model that evolves with the markets.

When Dr. Charles H. Sloan is away from live sessions, I'll be here to share his market insights and strategic guidance, helping every investor in this community uncover new ways to engage with the markets and new breakthroughs in quantitative strategy.

And today, as U.S. stocks rally once again — with the S&P 500 (\$SPX) strengthening, just as Dr. Charles H. Sloan anticipated on Monday — the question becomes: how do we position ourselves for the next phase of trades?

Will Powell's testimony before Congress hint at a possible rate cut in July?

Regarding the Iran-Israel conflict, Dr. Charles H. Sloan provided a fundamental analysis yesterday. He pointed out that Trump would not want the war to drag on or escalate, as this would drive up oil prices and, in turn, increase inflationary pressure in the U.S. Inflation is a key indicator the Federal Reserve watches closely, and it plays a critical role in decisions about interest rate cuts.

Therefore, a ceasefire — or even a complete resolution of the conflict — seems inevitable.

Dr. Charles H. Sloan believes that the U.S. stock market will refocus on expectations of rate cuts, especially in light of Powell's congressional testimony on Tuesday morning, which will influence that outlook.

Powell emphasized that the economy is performing well, but inflation still exceeds the 2% target, so interest rate decisions remain uncertain.

This balanced message aligns perfectly with market expectations.

After opening higher on Tuesday morning, the market continued to trade within a range. A strong economy supports upward momentum, and controlled inflation suggests rate cuts remain possible.

In my view, the worst-case scenario is a rate cut delayed until September. Given this, the current market presents a promising trading opportunity.

Why do I believe the latest we'll see a rate cut is by September?

It all starts with U.S. Treasury debt. America's strength is fundamentally tied to the ongoing issuance and circulation of U.S. Treasuries — the cornerstone of the dollar's global standing.

As we know, U.S. Treasuries are government-issued bonds sold to countries and institutions around the world — including major Wall Street players and key financial entities.

Put simply, issuing Treasuries is how the U.S. government borrows money.

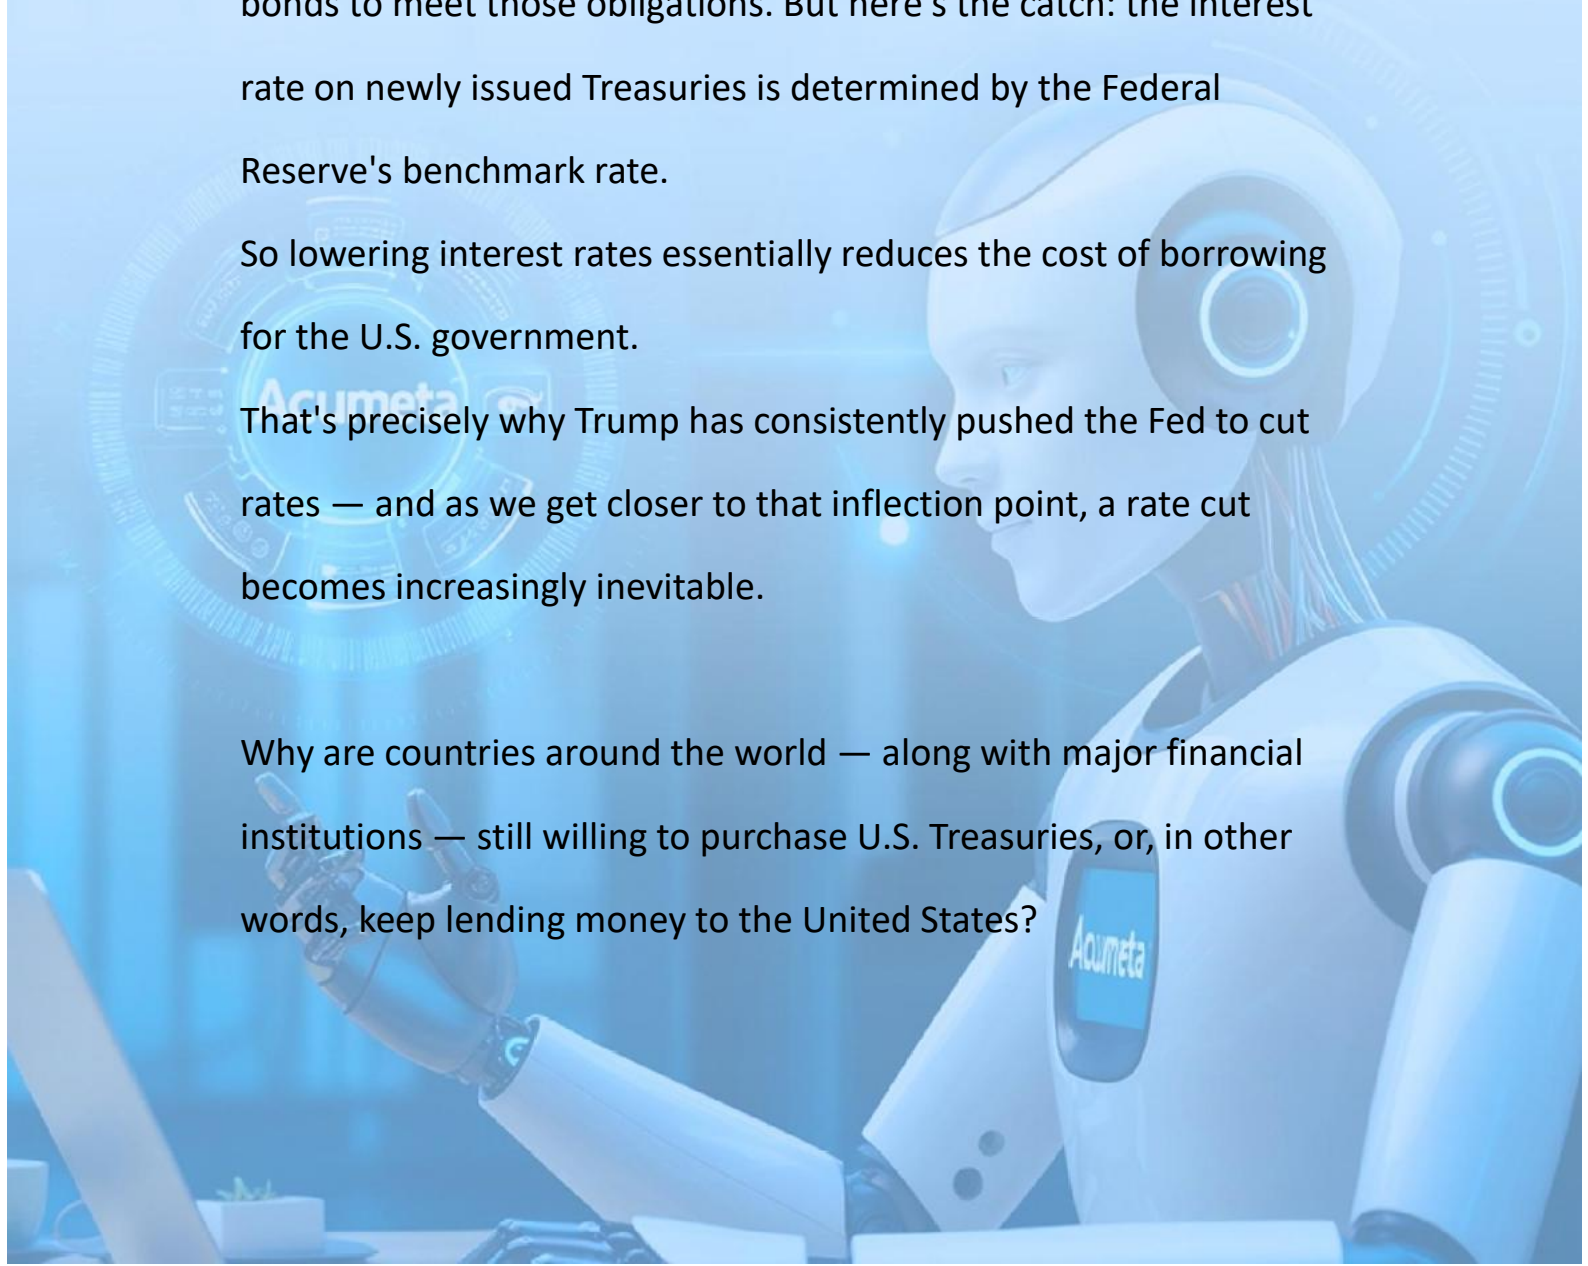

Right now, the size of the U.S. national debt has reached \$37 trillion. This year alone, \$6 trillion of that is set to mature — meaning both the principal must be repaid and interest must be paid on time.

Given that reality, the government has no choice but to issue new bonds to meet those obligations. But here's the catch: the interest rate on newly issued Treasuries is determined by the Federal Reserve's benchmark rate.

So lowering interest rates essentially reduces the cost of borrowing for the U.S. government.

That's precisely why Trump has consistently pushed the Fed to cut rates — and as we get closer to that inflection point, a rate cut becomes increasingly inevitable.

Why are countries around the world — along with major financial institutions — still willing to purchase U.S. Treasuries, or, in other words, keep lending money to the United States?

That's a topic I'll dive deeper into once our full course begins. But at its core, it comes down to one simple truth: you can't disconnect from the U.S. dollar — and on a deeper level, you can't disconnect from U.S. military power.

Military strength reinforces global influence. The reach of artillery defines the reach of negotiation.

From a quantitative trading perspective, it's clear that today's hottest sector remains blockchain and crypto-related opportunities.

Take a look at \$CLSK — a Bitcoin mining stock we highlighted last Friday and again on Monday. It delivered a strong rebound. If you entered at either of those points, you've likely captured impressive profits and can lock in gains today.

If you bought even earlier, you can continue to hold for potential new highs.

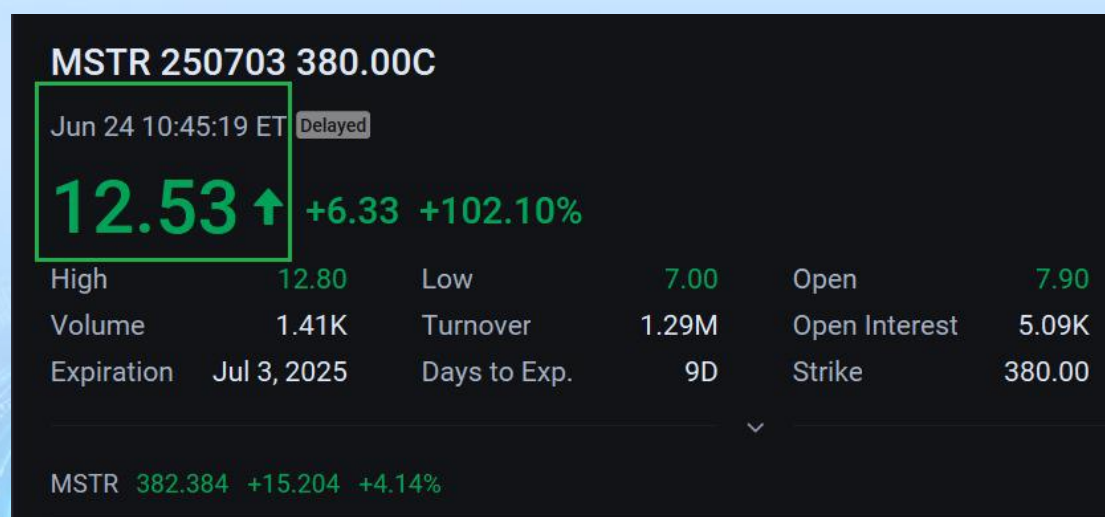

And let's not forget \$MSTR — the Bitcoin holding giant we discussed after hours yesterday. This company now holds over 600,000

Bitcoins with unrealized profits exceeding \$2 billion.

As expected, it reached above the \$380 strike price on its options today, marking a successful trade. You could choose to sell and lock in your gains — once again confirming the compensation-backed stock trading strategy's safety.

For those of you who entered \$MSTR options during this morning's session, congratulations — you're also in profit territory, and selling to secure returns remains a sound choice.

What makes this options strategy so compelling is its flexibility: it allows you to risk very little while aiming for meaningful upside.

Here's how it works — when you execute this safety-net trade, you're essentially securing the rights to profit from 200 shares of \$MSTR.

Based on yesterday's after-hours pricing, the option premium was \$6 per share, meaning your total cost was just \$1,200.

Yes — that's your full investment.

Now, if you choose to sell today, those same options are going for over \$10 per share. Selling all 200 brings in \$2,000.

Your profit? \$2,000 minus \$1,200 — that's \$800.

It might not sound huge on the surface, but here's the perspective: you earned over 60% on your capital — overnight.

That's the kind of strategic return options can offer. Do you see the potential?

Now compare that to buying the stock outright — you'd need close to \$70,000 to hold 200 shares of \$MSTR.

Do you see a new inspiration for a way to gain short-term wealth?

Of course, what matters even more is this: the reason we succeeded with the short-term options trade was because we recognized a fundamental truth—MSTR holds a massive amount of Bitcoin, and as Bitcoin's price continues to rise, so does MSTR's intrinsic value.

Think of it like running a cattle farm. If you own hundreds of cows and the price of beef keeps going up, the value of your farm naturally increases. It's a simple, intuitive logic.

So when we analyze the market and choose our trading strategies, it's not luck—it's insight. It's the product of a strong research team, clear reasoning, and the support of Acumeta, our intelligent system that helps us respond swiftly and precisely.

That's the power of technology in motion—and exactly the kind of decision-making future finance should enable: sharp, timely, and deeply informed.

And we're just getting started. Our goal is to keep delivering high-quality trading signals you can trust.

If you're a believer in Bitcoin, you can also consider buying its ETF: \$IBIT. It's a fund with real potential—and soon, I'll be sharing much more about why it matters.

A huge thank you to Dr. Charles H. Sloan for delivering such insightful trading content every single day — I honestly get excited every time!

Once again, Tuesday proved just how sharp and precise Dr. Charles H. Sloan's market logic is. His ability to cut straight to the core of

complex dynamics is remarkable. I can only imagine how much more value he'll bring when he's fully back with us. Are you ready for the next wave of high-impact, investment strategy sessions?

My friends, consistent profits and meaningful gains — that's the foundation of true loyalty within our community. It's about pushing boundaries, leveling up our expertise, and taking real, consistent action.

The vision for our Quantitative Think Tank Center is bold: building towards a \$3 billion valuation. But more importantly, we want that success to create value for every single member who starts their journey here with us.

I believe you're not here for just a quick stop — you're here to grow with us, to build long-term partnerships. Because investing isn't just a moment — it's a lifelong journey, and part of building a legacy for

So — are you loving the energy here as much as I am?

This afternoon, we'll keep exploring new ideas together. I'm Lauren D. Miller, your dedicated quantitative advisor — and hopefully, your angel on this journey.

Good afternoon, my friends,

Welcome back to our Quantitative Think Tank Center's strategy session. I'm Lauren D. Miller, assistant to Dr. Charles H. Sloan. On Tuesday, the capital markets wrapped themselves in a calm facade, yet beneath that surface, they found their stimulant. The real question is — how long can this strong bullish momentum truly last?

Later, I'll be sharing more of Dr. Charles H. Sloan's key interpretations and strategic guidance. I genuinely hope you don't miss these important insights.

But before we get started, I'd love to take a moment to connect

with those of you who are new to this community. No matter which state you're tuning in from, I believe we all share the same curiosity — unlocking the true code to building wealth through trading and investment.

Of course, I know some of you might be eager for proof — and that's completely fair. No need to rush. Stay with me, I'll be hosting more sessions on behalf of Dr. Charles H. Sloan, sharing actionable insights, and walking you through the real capabilities behind Acumeta.

I truly hope this space becomes not just informative, but inspiring for you. I look forward to building meaningful, long-term connections here — and I hope you enjoy everything this community has to offer.

If you're new here, be sure to visit our secure official website:

<https://www.finlogichub.com>.

It's the fastest way to access all the essential information about us.

Of course, you're also welcome to engage with our community — it's a great way to get to know us better over time.

If you often find yourself frustrated by not being able to pick the right stocks...

If you've ever regretted missing out on key alerts...

If poor investment decisions have ever caught you off guard...

If you've felt uncertain because you lacked experienced, reliable guidance...

If your investment journey leaves you with more questions than answers...

Then Acumeta may be exactly what you need.

It gives you clarity, confidence, and data-driven insights that can truly shift your perspective.

Of course, if you haven't experienced it for yourself yet, I understand — it may sound abstract. But let's be honest, the challenges you're facing deserve real solutions, don't they?

You can also find a full explanation of Acumeta on our official

website — I encourage you to take a look and explore more details for yourself.

In essence, Acumeta is the result of Dr. Charles H. Sloan's years of deep experience in the financial and investment markets. By combining that expertise with cutting-edge AI and blockchain technology, we've developed a tool designed to help investors tackle some of the most critical challenges they face.

The good news is, Acumeta has already made remarkable progress.

Right now, Dr. Charles H. Sloan and our team of engineers are focused on the final stages of internal testing and optimization.

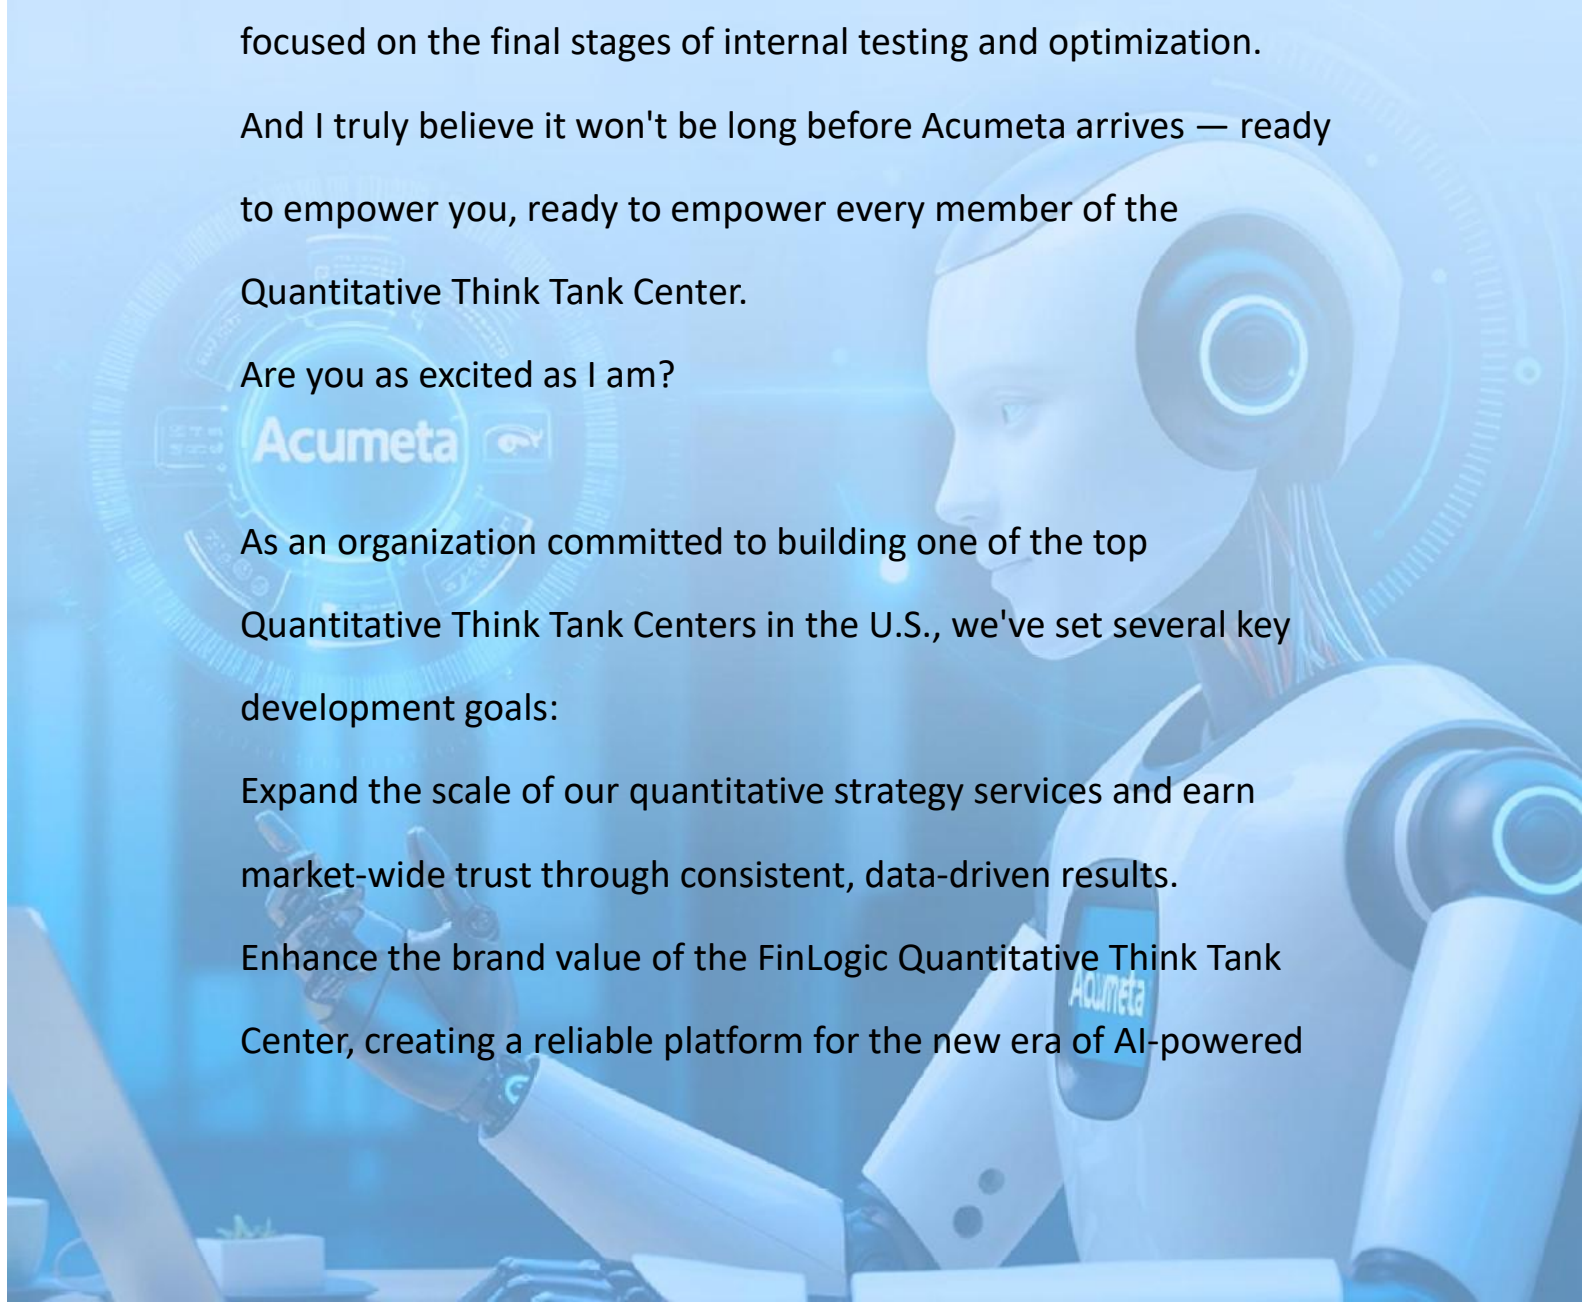

And I truly believe it won't be long before Acumeta arrives — ready to empower you, ready to empower every member of the Quantitative Think Tank Center.

Are you as excited as I am?

As an organization committed to building one of the top Quantitative Think Tank Centers in the U.S., we've set several key development goals:

Expand the scale of our quantitative strategy services and earn market-wide trust through consistent, data-driven results.

Enhance the brand value of the FinLogic Quantitative Think Tank Center, creating a reliable platform for the new era of AI-powered

applications.

Strengthen Acumeta's real-world big data capabilities and, through diversified, multi-market trading validation, achieve optimal performance and prepare for a global public offering.

Leverage The Stargate Project, a national strategic initiative, to attract major institutional capital and secure a \$3 billion premium acquisition of the Quantitative Think Tank Center by 2026, delivering exceptional returns to our shareholders.

Consistently protect user outcomes by applying secure, proven quantitative trading strategies and building a strong reputation for success.

That's why we keep pushing forward — investing our energy, expertise, and resources to bring Acumeta to the global stage.

And I truly hope you'll be among the first to experience its potential as one of our earliest, most trusted users.

Dr. Charles H. Sloan is fully focused on the final development sprint for Acumeta. The current internal testing version has already shown promising results, and our engineers are now evaluating its trading performance and security protections.

As a financial tool, Acumeta's core mission is to provide every investor with an outstanding investment experience, along with

robust security and real-time risk monitoring. That's the vision Dr. Charles H. Sloan has set for Acumeta — making investing smarter, safer, and more accessible.

Let's be patient together as we wait for its official launch.

Before Dr. Charles H. Sloan returns to lead the next session, he'll continue closely monitoring the stock market and sharing valuable insights with all of you in real time.

Will you be staying tuned and looking forward to what's next?

Of course, Dr. Charles H. Sloan is already preparing our upcoming core courses on quantitative strategy — covering everything from stock trends, market analysis and decision-making frameworks, to stock options, high-dividend ETFs, digital assets, and U.S. Treasury products.

If you're interested in deepening your knowledge in any of these areas, or if you have other learning needs, please let me know. I'll be sure to share your feedback with our analyst team.

Here in the U.S., education in quantitative trading has always been a respected and meaningful field — and I feel grateful to be part of it. I truly believe that, in the near future, we'll earn even more of your trust and support.

Have you already found a quantitative strategy education platform

that feels truly impactful and worth your time?

Here's a quick update on the U.S. stock market performance this Tuesday, based on Dr. Charles H. Sloan's analysis:

Tuesday's market delivered a solid performance, with bullish sentiment clearly taking the lead. The shadow of geopolitical tensions is fading, while expectations for rate cuts continue to build — fueling a fresh wave of capital enthusiasm.

Today, the S&P 500 (.SPX) opened strong and maintained upward momentum, reflecting heightened market confidence. According to historical data identified by Acumeta, when we see this type of strong opening, it often signals the start of a new upward trend. For reference, we saw a similar short-term rally around May 12, and an earlier example on April 24.

This suggests the second half of this week could still see indices climbing, although we should stay mindful of short-term fluctuations and market concerns around upcoming non-farm payroll data.

Given the current setup, there's room to approach trading with a more constructive, proactive mindset.

Another key point to note — this afternoon, Fed official Neel

FinLogic

Kashkari stated that if the labor market deteriorates sharply, they would still proceed with rate cuts, even if inflation remains elevated.

This reinforces the idea that rate cuts are becoming a firm policy direction, with a high probability of seeing the first cut in September. However, if we see cooling non-farm employment data and a rising unemployment rate, rate cuts could arrive as early as July.

That's why, at the beginning of the month, Dr. Charles H. Sloan will provide clearer strategic guidance based on the latest data.

At the same time, if inflation remains stubbornly high and policymakers shift focus toward protecting the job market, it could mark the beginning of a new wave of prosperity for the robotics and industrial automation sector.

We might be on the verge of a huge profit explosion for businesses in this sector, which would lead to what could be called a "perfect race" in robotics innovation as AI applications finally enter a period of exponential growth.

U.S. Treasury Secretary Scott Bessent recently emphasized: never default on U.S. debt.

This highlights that the biggest pressure facing the U.S. government this year comes from repaying and servicing maturing Treasury bonds.

Government revenues and expenditures will inevitably lead to increased borrowing. Currently, with the national debt totaling \$37 trillion, it effectively means every American taxpayer carries a

notional burden of about \$303,000.

Yes, while you won't be directly paying off all of that debt yourself, taxes exist to support the country and prevent government default.

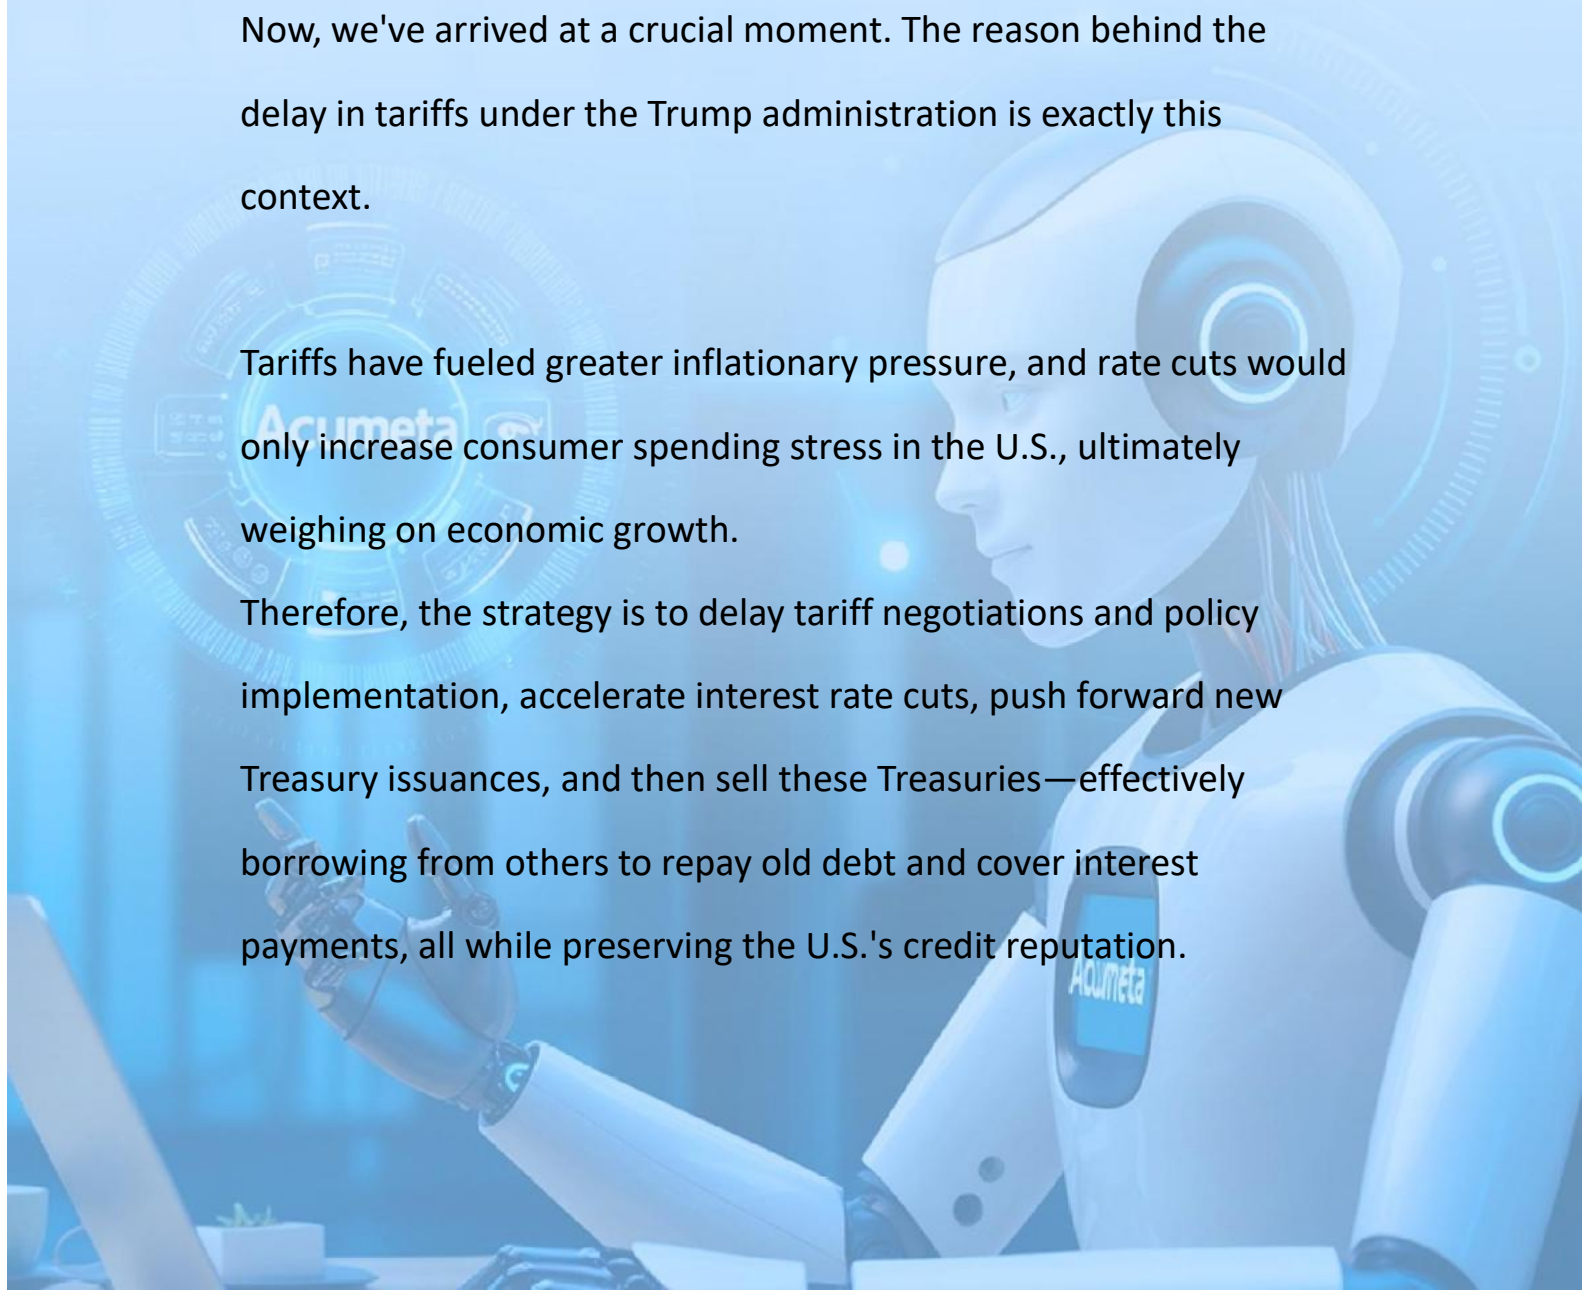

Protecting the government's creditworthiness is ultimately protecting the credibility of U.S. debt.

Why do people trust U.S. Treasuries? Because of America's stable political system, orderly transfer of government power, and a strong, capable military — all of which assure the world that lending to the U.S. is safe, reliable, trustworthy, and profitable.

Now, we've arrived at a crucial moment. The reason behind the delay in tariffs under the Trump administration is exactly this context.

Tariffs have fueled greater inflationary pressure, and rate cuts would only increase consumer spending stress in the U.S., ultimately weighing on economic growth.

Therefore, the strategy is to delay tariff negotiations and policy implementation, accelerate interest rate cuts, push forward new Treasury issuances, and then sell these Treasuries—effectively borrowing from others to repay old debt and cover interest payments, all while preserving the U.S.'s credit reputation.

This is why rate cuts are a key factor in addressing this century's economic challenge.

On another level, it's about securing more buyers for U.S. debt.

Currently, Japan and China hold the largest shares of U.S. Treasuries, but their ongoing sales create significant pressure.

That's why the Trump administration evolved from its initial stance (version 1.0) to a more accommodating approach (version 2.0)

toward Bitcoin and cryptocurrencies. This shift enabled a

multi-layered, industry-friendly development

environment—especially with the passage of stablecoin legislation, which positions stablecoins as future global currency leaders.

Behind this strategy is also a calculated move to manage the buyer base for U.S. Treasuries.

ACUMETA STOP-LOSS VERIFICATION TRADING DETAILS

STOCK TICKER	PROFIT/ONGOING	STOP-LOSS INSTRUCTIONS	STOP-LOSS ACTIVATED	OUTCOME
PDD	Profit	Sell Notification	July 4	Success
CLSK	Profit	Sell Notification	July 11	Success
IWY/PFF	Success	Cash cow, provide dividend	July 11	Success
MSTR	Options	Overnight/intraday profits >60%	July 11	Success

Dr. Charles H. Sloan believes that consistently purchasing IBIT is essentially an indirect way to hold Bitcoin. It's a smart strategy,

whether you choose to buy through options or directly with the underlying shares. The main difference lies in cost—options carry time value and suit a faster trading pace.

When you receive quantitative strategy signals in our group, you should actively follow through with new trades—and be sure to screenshot and share your progress with me.

Because you have access to our compensation-backed stock trading service, it's important to remember this service isn't offered indefinitely. Once our validation process is complete, we will discontinue it. So cherish every trading opportunity you have right now!

Here's today's Tuesday after-hours compensation-backed stock trading recommendation:

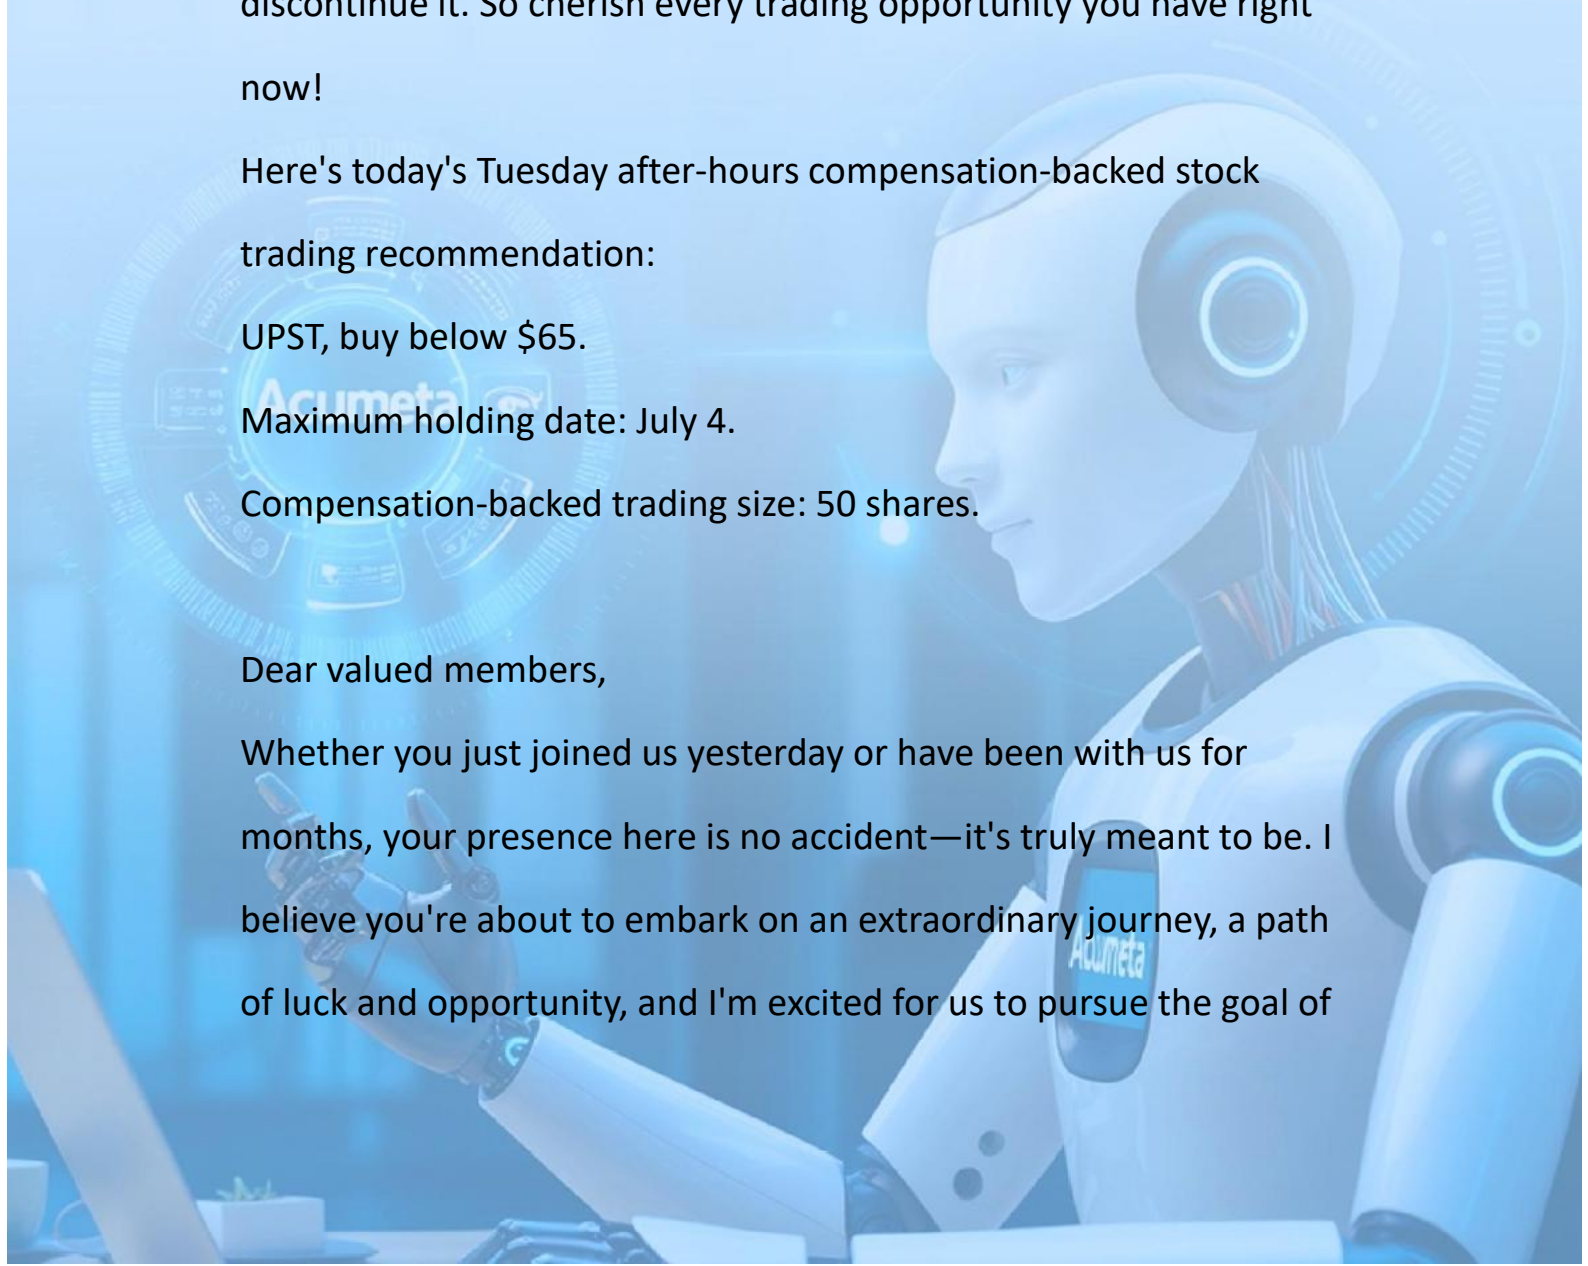

UPST, buy below \$65.

Maximum holding date: July 4.

Compensation-backed trading size: 50 shares.

Dear valued members,

Whether you just joined us yesterday or have been with us for months, your presence here is no accident—it's truly meant to be. I believe you're about to embark on an extraordinary journey, a path of luck and opportunity, and I'm excited for us to pursue the goal of

growing wealth together.

While I may not offer the seasoned, expert, and visionary investment insights that Dr. Charles H. Sloan provides, meeting you today fills me with genuine happiness.

Let's begin this wonderful journey of quantitative strategy education together. Join us, and maybe a year from now, you'll look back and realize all the changes have shown you made the right choice.

With the recent heatwave sweeping across the U.S. East Coast, please take care to stay cool. I hope your evenings are refreshing and filled with the warmth of loved ones.

See you on Wednesday!
