

Wednesday, June 25, 2025

Good morning, my friends—

Wednesdays always carry a bit of good luck, don't they? Just like the way I got to meet you—there's always that spark of connection and possibility.

Maybe today is your first time getting to know us—getting to know Acumeta, and discovering our quantitative strategies. But where it all began, I want you to remember me, I'm Lauren D. Miller.

I serve as a Quantitative Advisor at the FinLogic Quantitative Think Tank Center, and I 'm also a teaching assistant to our Dr. Who is our

Dr.?

Take a moment to visit our official website for all the details:

<https://www.finlogichub.com>.

Yes, Dr. Charles H. Sloan who founded this Think Tank with a belief that blends rigorous research with something deeper—the compassion and hope that should guide every meaningful innovation.

Because at the end of the day, we're here to build lasting partnerships through investment. To create real, recognized value through data-driven strategies that stand the test of time.

Are you ready for more good things to happen? I know I am.

Let's stay connected, my friends.

I'll be here continuing to host content and share insights within our community groups, stepping in while Dr. Charles H. Sloan is away for now.

I'll be honest—my investment thinking may not be as sharp or as comprehensive as the Doctor's, but I promise you this: I'll give it

everything I have to support you, my friends.

At the same time, I'll make sure to share Dr. Charles H. Sloan's latest market insights and key guidance on quantitative strategies as soon as they become available. I encourage you to stay tuned here so you can access timely information and practical trading support.

It's Wednesday—and naturally, we're all wondering: how should we approach today's trades? How do we assess the current market trends? What pre-market indicators really matter right now?

I've already consulted with Dr. Charles H. Sloan and will walk you through these answers, step by step.

I hope this brings you meaningful value and helps make your interaction here truly worthwhile.

Why am I so passionate about encouraging everyone to get involved here?

Once you join our community, you're invited to share your own perspectives, talk openly about your trading experience, and set clear goals for your investment journey.

That's how we create a more dynamic, thoughtful, and high-impact space together—a space where we can dive deeper into market strategies when opportunities arise.

And if you ever feel uncertain or have questions about the stocks you're holding, I'm here for that. You can always reach out to me for more tailored, professional insights.

We also have an incredible team of analysts, and of course, Acumeta's platform to support you.

Oh—and one more thing: every new member who joins us here gets access to a few special perks. Curious what they are?

The benefits we offer here are designed to empower your investment journey—and they're pretty exciting. Here's what you can expect:

You'll get personalized stock guidance and professional market insights, while building real, thoughtful connections with us.

You'll receive a high-value stock research report, worth over \$100,000. Just let me know which stock holds the largest position in

your portfolio, and I'll help you with this. It's a comprehensive, Wall Street-grade analysis—and you'll get it completely free, one time. You're also welcome to take part in our welcome gift program—by engaging, learning, and contributing to the group discussions, as well as participating in real stock trades.

When you trade alongside our guidance, you'll have access to our compensation-backed stock trading protection. That means if you follow our instructions and experience losses, we provide a coverage solution to give you peace of mind.

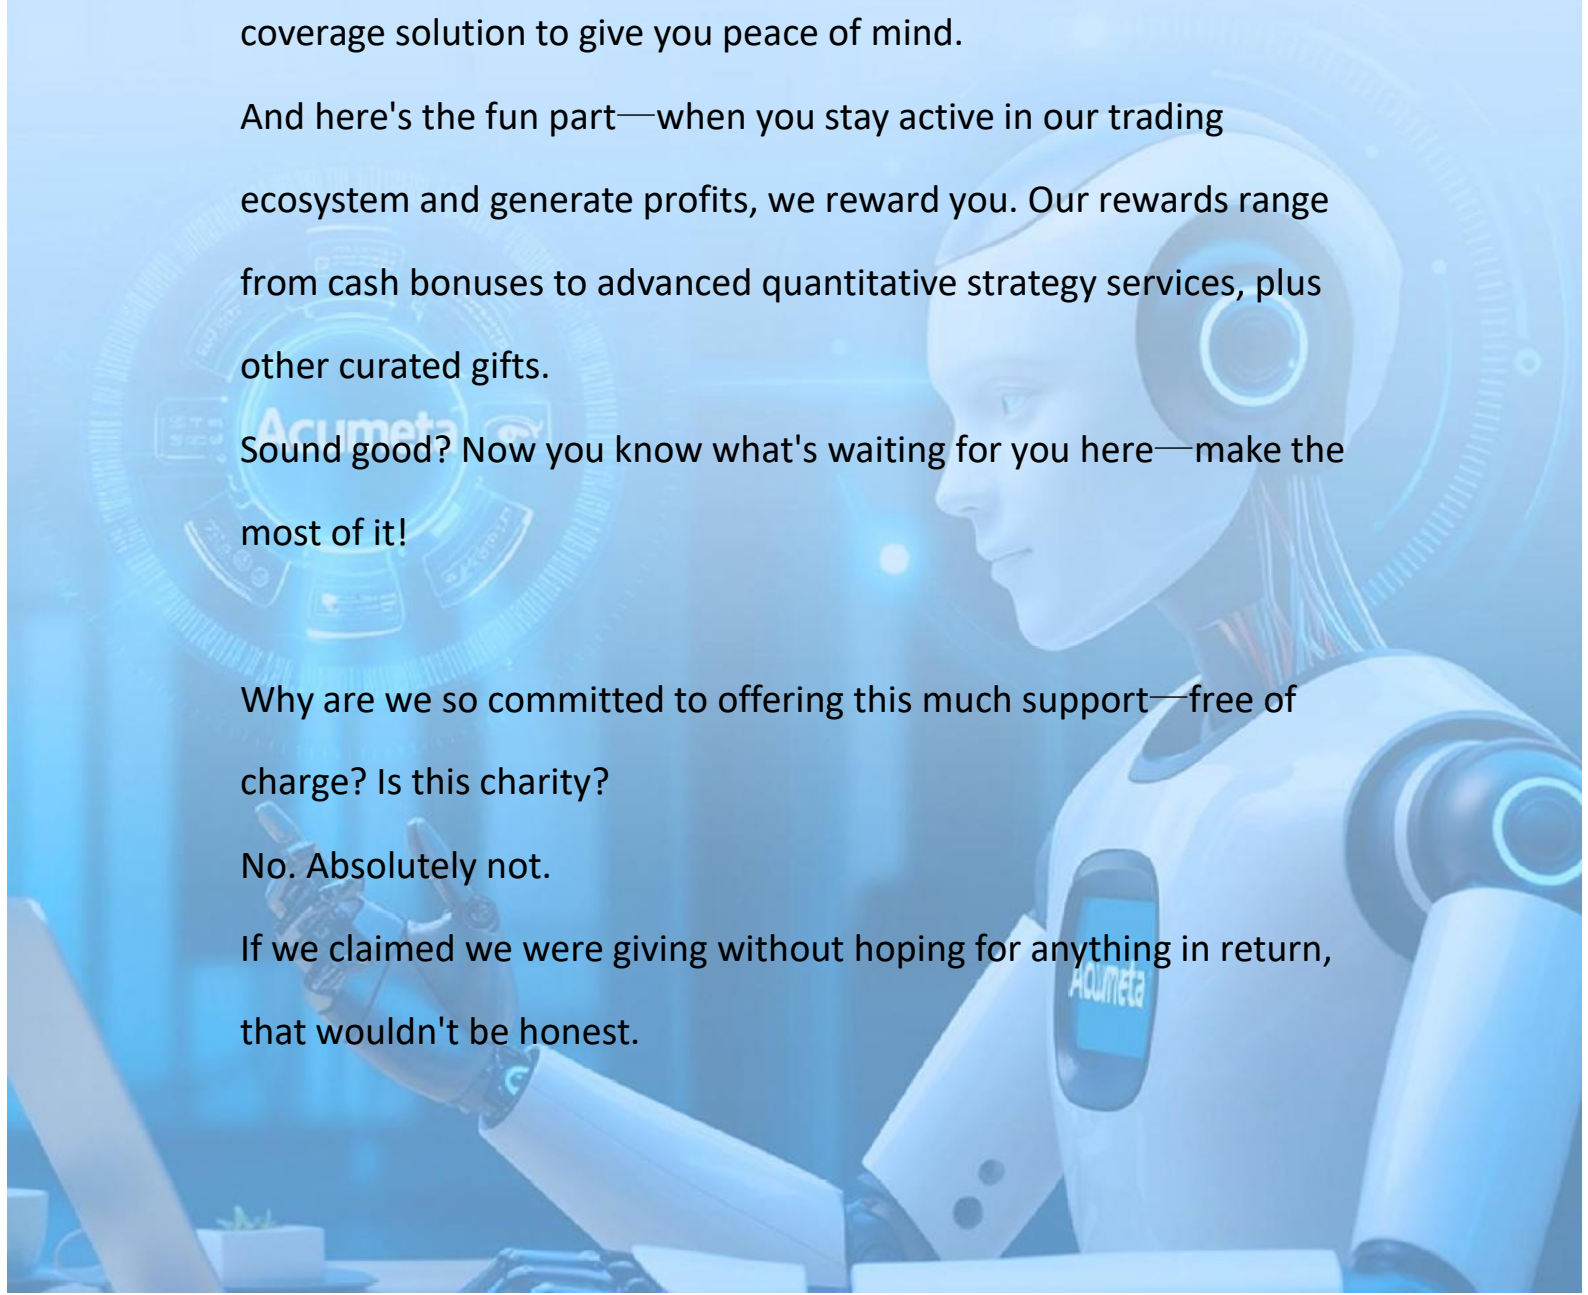

And here's the fun part—when you stay active in our trading ecosystem and generate profits, we reward you. Our rewards range from cash bonuses to advanced quantitative strategy services, plus other curated gifts.

Sound good? Now you know what's waiting for you here—make the most of it!

Why are we so committed to offering this much support—free of charge? Is this charity?

No. Absolutely not.

If we claimed we were giving without hoping for anything in return, that wouldn't be honest.

What we're truly hoping for is your trust—and your word-of-mouth recognition. That's it. Simple and transparent.

We've invested time, talent, and resources because we're building something meaningful here: a high-impact, collaborative ecosystem, and ultimately, a brand identity that belongs to this Quantitative Think Tank Center.

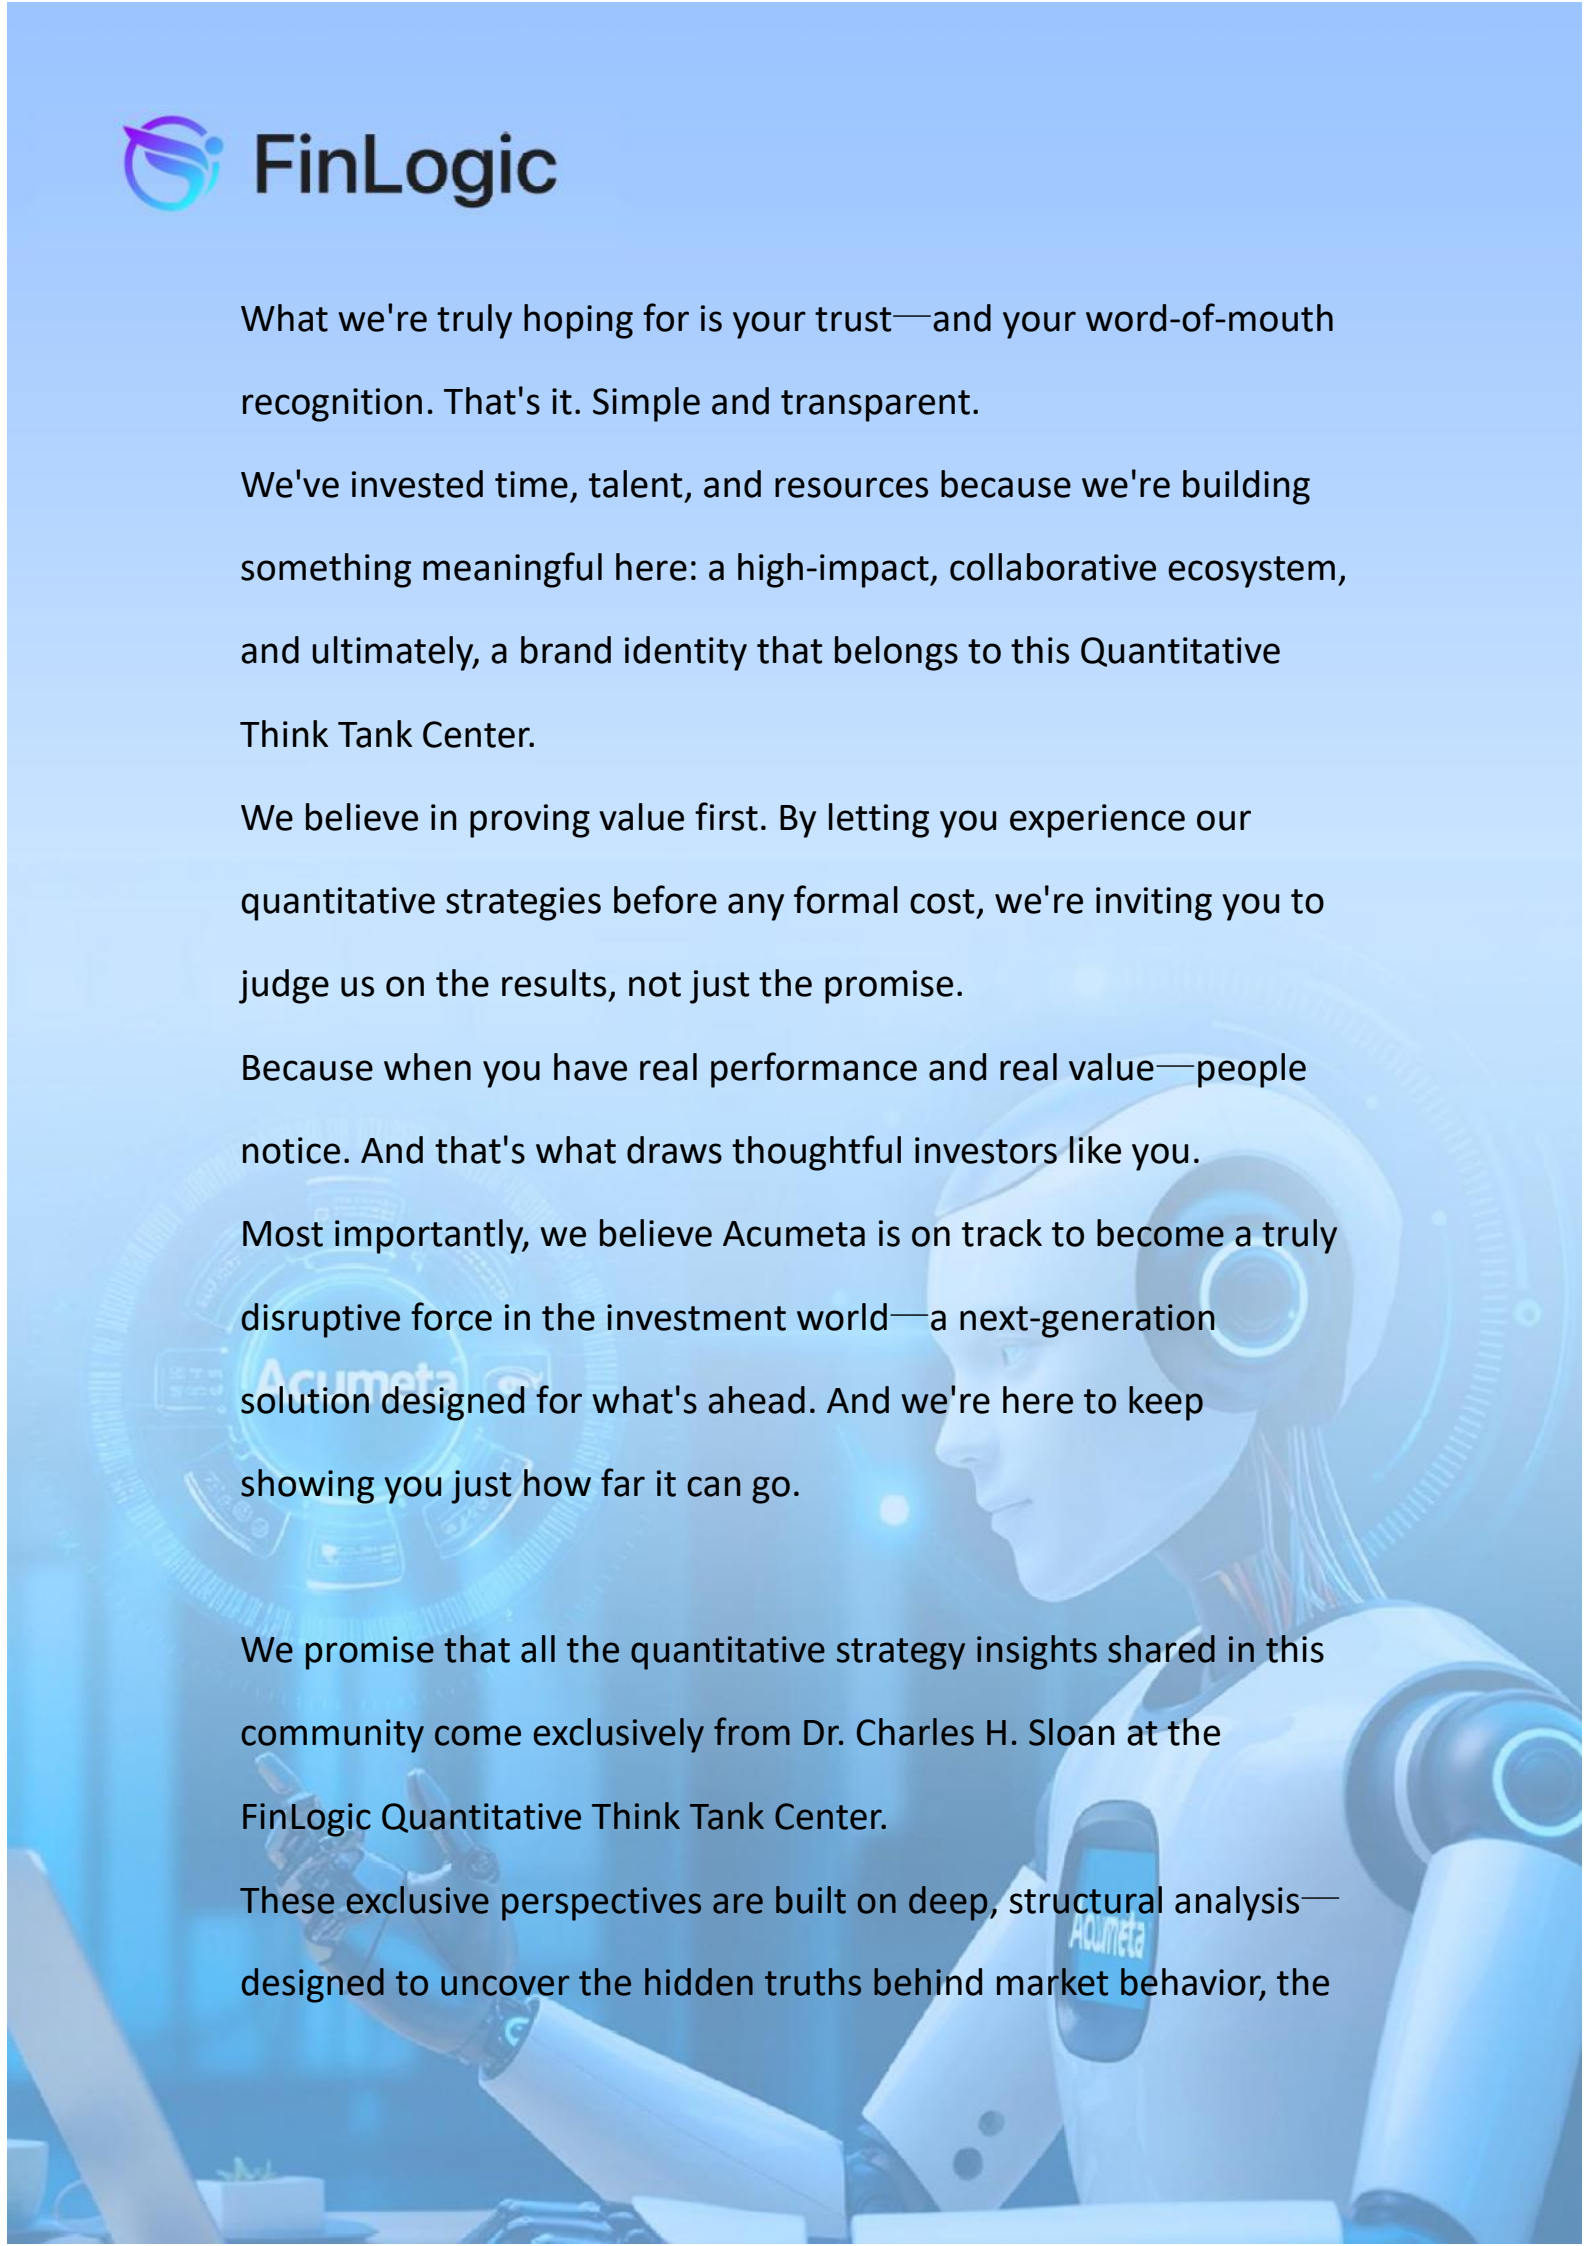

We believe in proving value first. By letting you experience our quantitative strategies before any formal cost, we're inviting you to judge us on the results, not just the promise.

Because when you have real performance and real value—people notice. And that's what draws thoughtful investors like you.

Most importantly, we believe Acumeta is on track to become a truly disruptive force in the investment world—a next-generation solution designed for what's ahead. And we're here to keep showing you just how far it can go.

We promise that all the quantitative strategy insights shared in this community come exclusively from Dr. Charles H. Sloan at the FinLogic Quantitative Think Tank Center.

These exclusive perspectives are built on deep, structural analysis—designed to uncover the hidden truths behind market behavior, the

kind of investment puzzles Wall Street itself has yet to fully solve.

It's a long-term process, and we are committed to showing up and doing the work every single day.

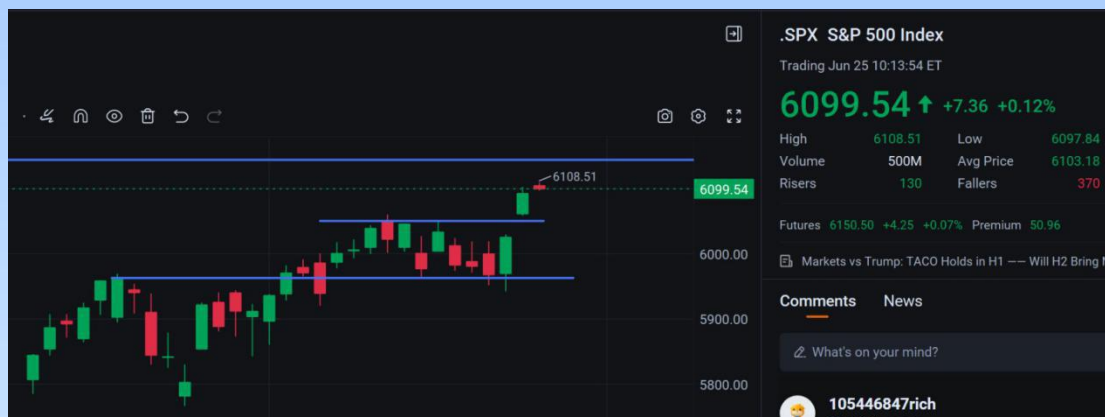

It's Wednesday, so let's dive into the latest market insights our Doctor has prepared—and take a moment to reflect on whether his views from the first two trading days this week have played out as expected.

First, here's what Dr. Charles H. Sloan emphasizes: when it comes to the U.S. markets, pre-market activity is critical. Specifically, keep a close eye on index futures, as they often signal whether we'll see a higher or lower open.

The key index futures to watch are: NQmain, MESmain, and YMmain. By tracking their performance, we can better anticipate how the major indexes might move once the market officially opens.

As we saw in pre-market trading this Wednesday, the major index futures showed strong momentum—signaling a higher open for the market. Take the SPX, for example: it opened on a strong note. But historically, these kinds of higher opens often lead to short-term selling pressure during the morning session, which can bring about

noticeable intraday shifts.

Looking back to Monday and Tuesday, Dr. Charles H. Sloan projected that the three major indexes would continue their upward trend—and so far, that call has been right on point.

His analysis of the ceasefire developments between Iran and Israel also demonstrated remarkable foresight.

Now, as we reflect on today's setup, it's clear the U.S. market is brushing up against a key historical resistance level—specifically the SPX, facing pressure near 6147. This zone is very likely to trigger some volatility.

So here's the question: After this morning's higher open, why the market is very likely to experience a rapid pullback.

According to Dr. Charles H. Sloan, the primary reason behind this is the increased sell-off pressure around historical highs, which tends to heighten short-term market emotions.

There's also growing concern about whether the Fed will cut rates in July. Especially as we move toward the end of the month, all eyes will be on the upcoming non-farm payroll data at the start of July—that's creating noticeable market divergence right now. So, while we're seeing some index fluctuations here, it's unlikely to cause any significant structural impact.

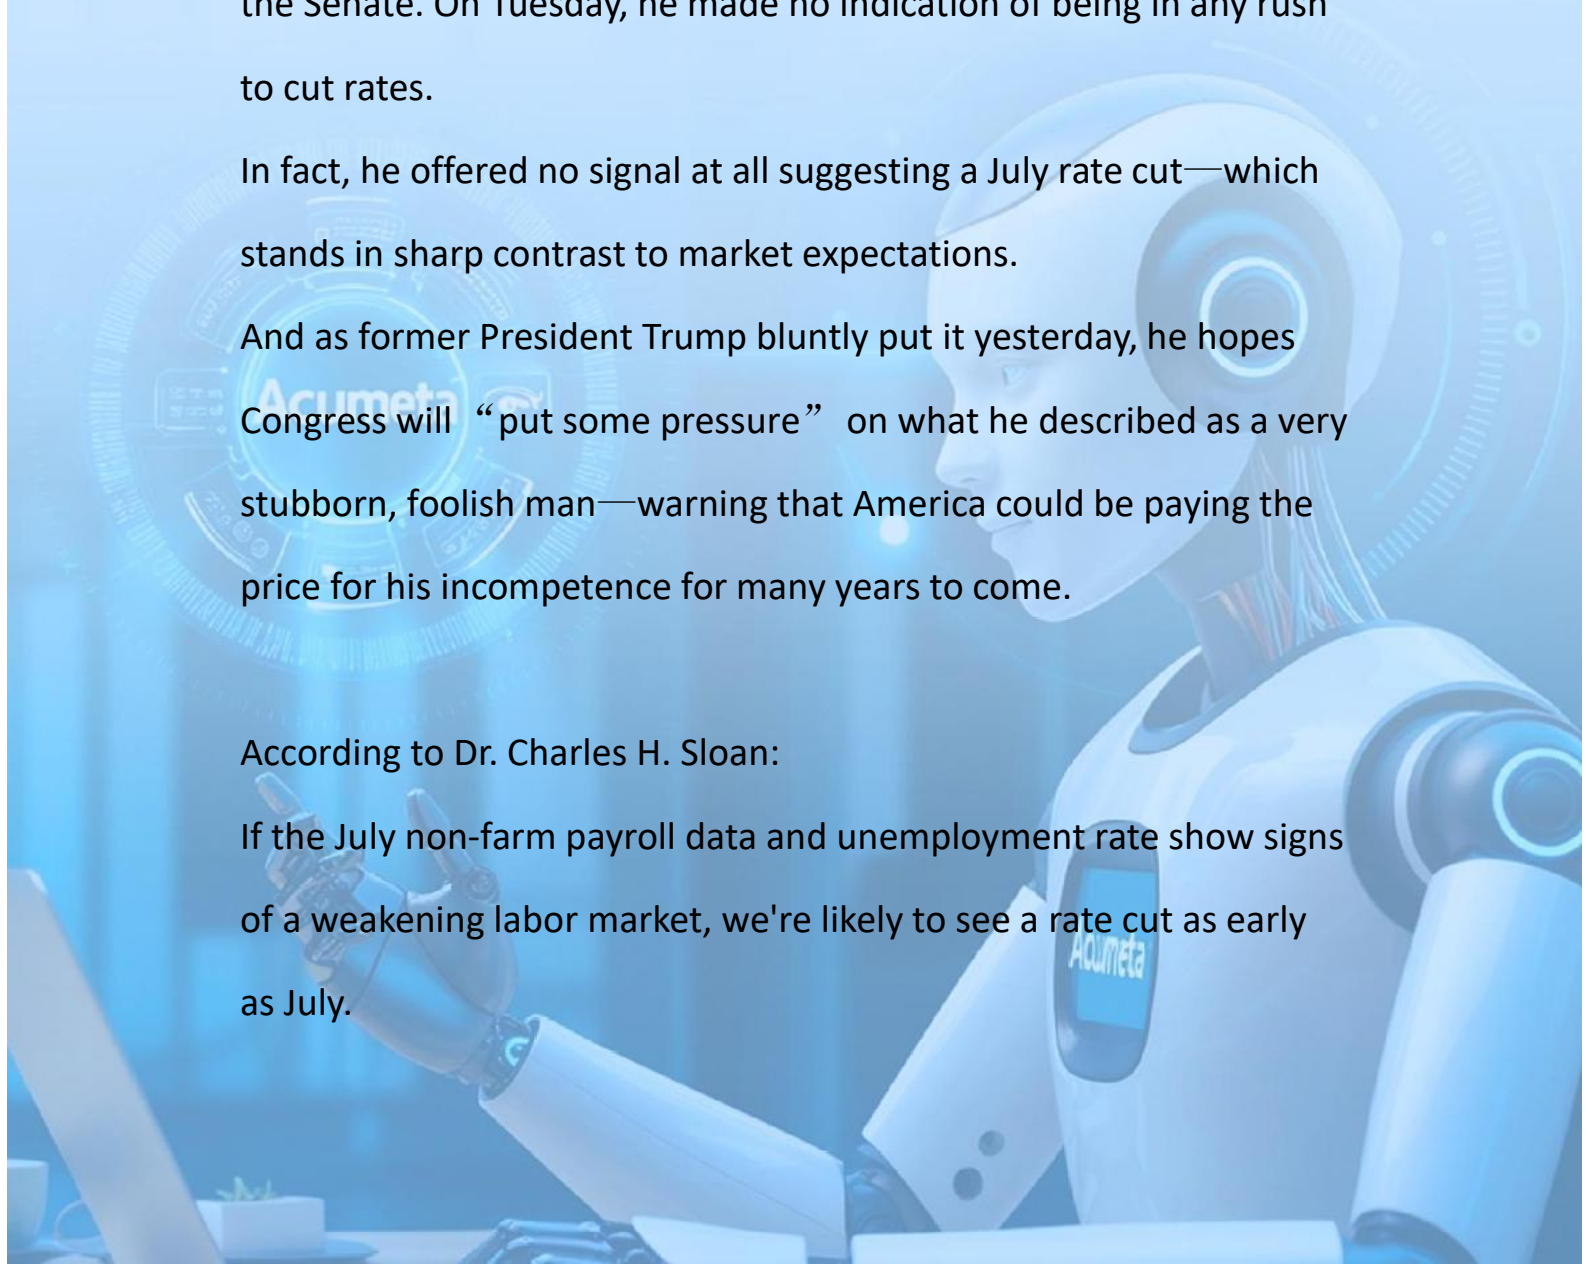

As for whether today will present new market opportunities, that depends on further updates from the Fed Chair's testimony before the Senate. On Tuesday, he made no indication of being in any rush to cut rates.

In fact, he offered no signal at all suggesting a July rate cut—which stands in sharp contrast to market expectations.

And as former President Trump bluntly put it yesterday, he hopes Congress will “put some pressure” on what he described as a very stubborn, foolish man—warning that America could be paying the price for his incompetence for many years to come.

According to Dr. Charles H. Sloan:

If the July non-farm payroll data and unemployment rate show signs of a weakening labor market, we're likely to see a rate cut as early as July.

But if the data reflects a strong, resilient economy, the rate cut will likely be pushed to September.

Now, today's expectation of two rate cuts isn't just speculation—it's a well-founded, data-driven conclusion based on extensive historical analysis powered by Acumeta's vast dataset, provided to support Dr. Charles H. Sloan's research.

That's why the third quarter is shaping up to be defined by one key theme: the market's anticipation of a rate-cutting cycle.

We all understand that in markets, managing expectations is often the most strategic advantage—because once the actual news drops, the biggest opportunities often come from locking in gains, not chasing headlines.

In other words, Q3 could be our window—the perfect honeymoon phase—to actively grow wealth. I hope you'll seize the moment and see your portfolio thrive.

MSTR 250703 380.00C

Jun 25 10:31:10 ET Delayed

11.50 ↑ +2.70 +30.68%

High	15.00	Low	10.40	Open	12.50
Volume	540	Turnover	696.38K	Open Interest	5.53K
Expiration	Jul 3, 2025	Days to Exp.	8D	Strike	380.00

The exciting news this Wednesday? Bitcoin prices continue to climb —impressively so.

As many of you know, the U.S. has become the strategic center for global Bitcoin reserves. Right now, the U.S. collectively holds over 3 million Bitcoins, and that number is expected to keep growing as more states move forward with reserve legislation.

Let's talk specifics. One of the names we've been sharing with you —MSTR—currently holds 600,000 Bitcoins. And IBIT? Over 680,000 Bitcoins under management.

Yes, both of these tradeable assets have validated the success of our quantitative strategy.

And let's not forget CLSK, a Bitcoin mining company holding over 10,000 Bitcoins—their stock price just hit another new high.

Looking at the bigger picture, our quantitative strategy has been delivering successful Bitcoin-related trades—and the logic behind that success is remarkably simple.

Think of it this way: when everyone's raising chickens and the price of chicken goes up, we all win. Same idea here.

Good investing doesn't have to be complicated.

IBIT 250718 65.00CJun 25 10:37:16 ET Delayed**1.13** **↑** **+0.35** **+44.87%**

High	1.19	Low	0.98	Open	1.05	Prev Close
Volume	9.2K	Turnover	1.03M	Open Interest	19.12K	IV
Expiration	Jul 18, 2025	Days to Exp.	23D	Strike	65.00	Premium

The market's spike followed by a pullback is simply a reflection of normal sentiment-driven selling—nothing more.

We can see this same logic play out in IBIT's options market.

Yesterday, the option price hovered around 0.7, and today, it climbed above 1.1. An increase in option prices means the premium per share is rising.

That tells us the market is filled with curiosity—and confidence—about IBIT's potential price movement.

Sure, the stock itself hasn't yet reached \$65, but options traders believe it will. That belief forms what's called consensus expectations—and it's the foundation of market momentum.

Once you understand this dynamic, it becomes clear: with the Q3 rate cut expectations building, Bitcoin's price rally is well underway.

And embracing IBIT—whether through shares or options—is how we position ourselves to capture that upside.

Yesterday afternoon, the stock selected for compensation-backed verification was UPST.

On Wednesday, even as the market pulled back, we continued to buy in—staying aligned with our entry signals and fully covered by our safety-net verification service.

Looking across our historical validations, we've achieved a solid success rate—further proving that Acumeta's data-driven approach to equity analysis is gaining strong momentum. And that momentum is only just beginning.

Did you join us for today's validated trade?

If you prefer fast-paced participation, consider trading the options.

If you're looking for a longer-term position, go with the underlying shares.

Personally, I believe true investing is about diversification. Making a success is just the beginning—what matters most is how we scale that success. That's exactly the kind of insight our Doctor is here to help you master.

Friends, Wednesday's market volatility is obvious—and in our view, it's also a clear buying opportunity. Stay bold. Stay with the strategy. We'll continue the conversation after the market closes.

Hi friends, good afternoon!

I'm Lauren D. Miller — one of those names sitting in your contacts list, right?

Welcome back to our Quantitative Strategy Investment Session — where we unpack the U.S. market after the close.

On Wednesday, during his testimony to Congress, Jerome Powell didn't signal any move to accelerate rate cuts. His rigid stance is already under heavy fire from Trump.

But Powell did mention that "the current rate environment is slightly restrictive" — which, in Fed language, is really a quiet hint that rate cuts are needed.

Right now, the entire market is guessing, constantly shifting with expectations and sentiment. Just look at today's S&P 500 (SPX) — a classic sideways, choppy day — it tells the story perfectly.

So, what should we be doing this Thursday? Let's explore it together and see what fresh opportunities we can uncover!

Welcome to all the new friends joining us here!

I truly hope to keep creating an exceptional experience for you — though to be clear, I'm not here to simply “serve” you. What I really hope for is your feedback, your ideas, your interaction — because that's how we build meaningful, two-way connections.

As you know, in the world of quantitative strategy, we're working with Acumeta to develop long-term, high-performing investment tools. Our vision is for it to evolve beyond human-level thinking and reasoning — to deliver intelligent, automated, custodial services.

The idea is simple: when you use Acumeta, when you entrust it with your strategies, you can stay focused on your life, your work — or that next adventure — while your capital works for you. Through Acumeta's intelligent, rules-based system, your investments can generate returns under preset conditions. You won't need to worry

about safety — Acumeta is designed with built-in alerts, performance triggers, and a whole suite of smart features.

Today, we're putting all of that to the test. And from the moment you joined us, you've been part of making Acumeta better.

So, how do we give back to you for participating in this long-term Acumeta optimization journey? Here's what we can offer:

We provide professional quantitative investment guidance and research reports — completely free of charge.

We share stock opportunities designed to deliver reliable short- to medium-term trading profits.

For every stock you're willing to help validate and grow with us, we offer compensation-backed services to enhance your sense of security.

We also reward you — when your trades generate profits over time, it shows you've contributed valuable real-world data to Acumeta, which helps us improve the system for everyone.

And beyond trading, we offer fun community perks — like surprise gifts you can win through our daily Lucky Spin activities, part of our interactive trading experience.

So tell me — how many projects are you already part of?

For those of you who are new here, I invite you to explore the official, secure website of the Quantitative Think Tank Center:

<https://www.finlogichub.com>

Feel free to click through. On our official site, you can quickly find the following:

& About Dr. : Get to know who Dr. is, and read his personal story.

& About the Quantitative Think Tank Center: Discover our vision, values, and long-term roadmap.

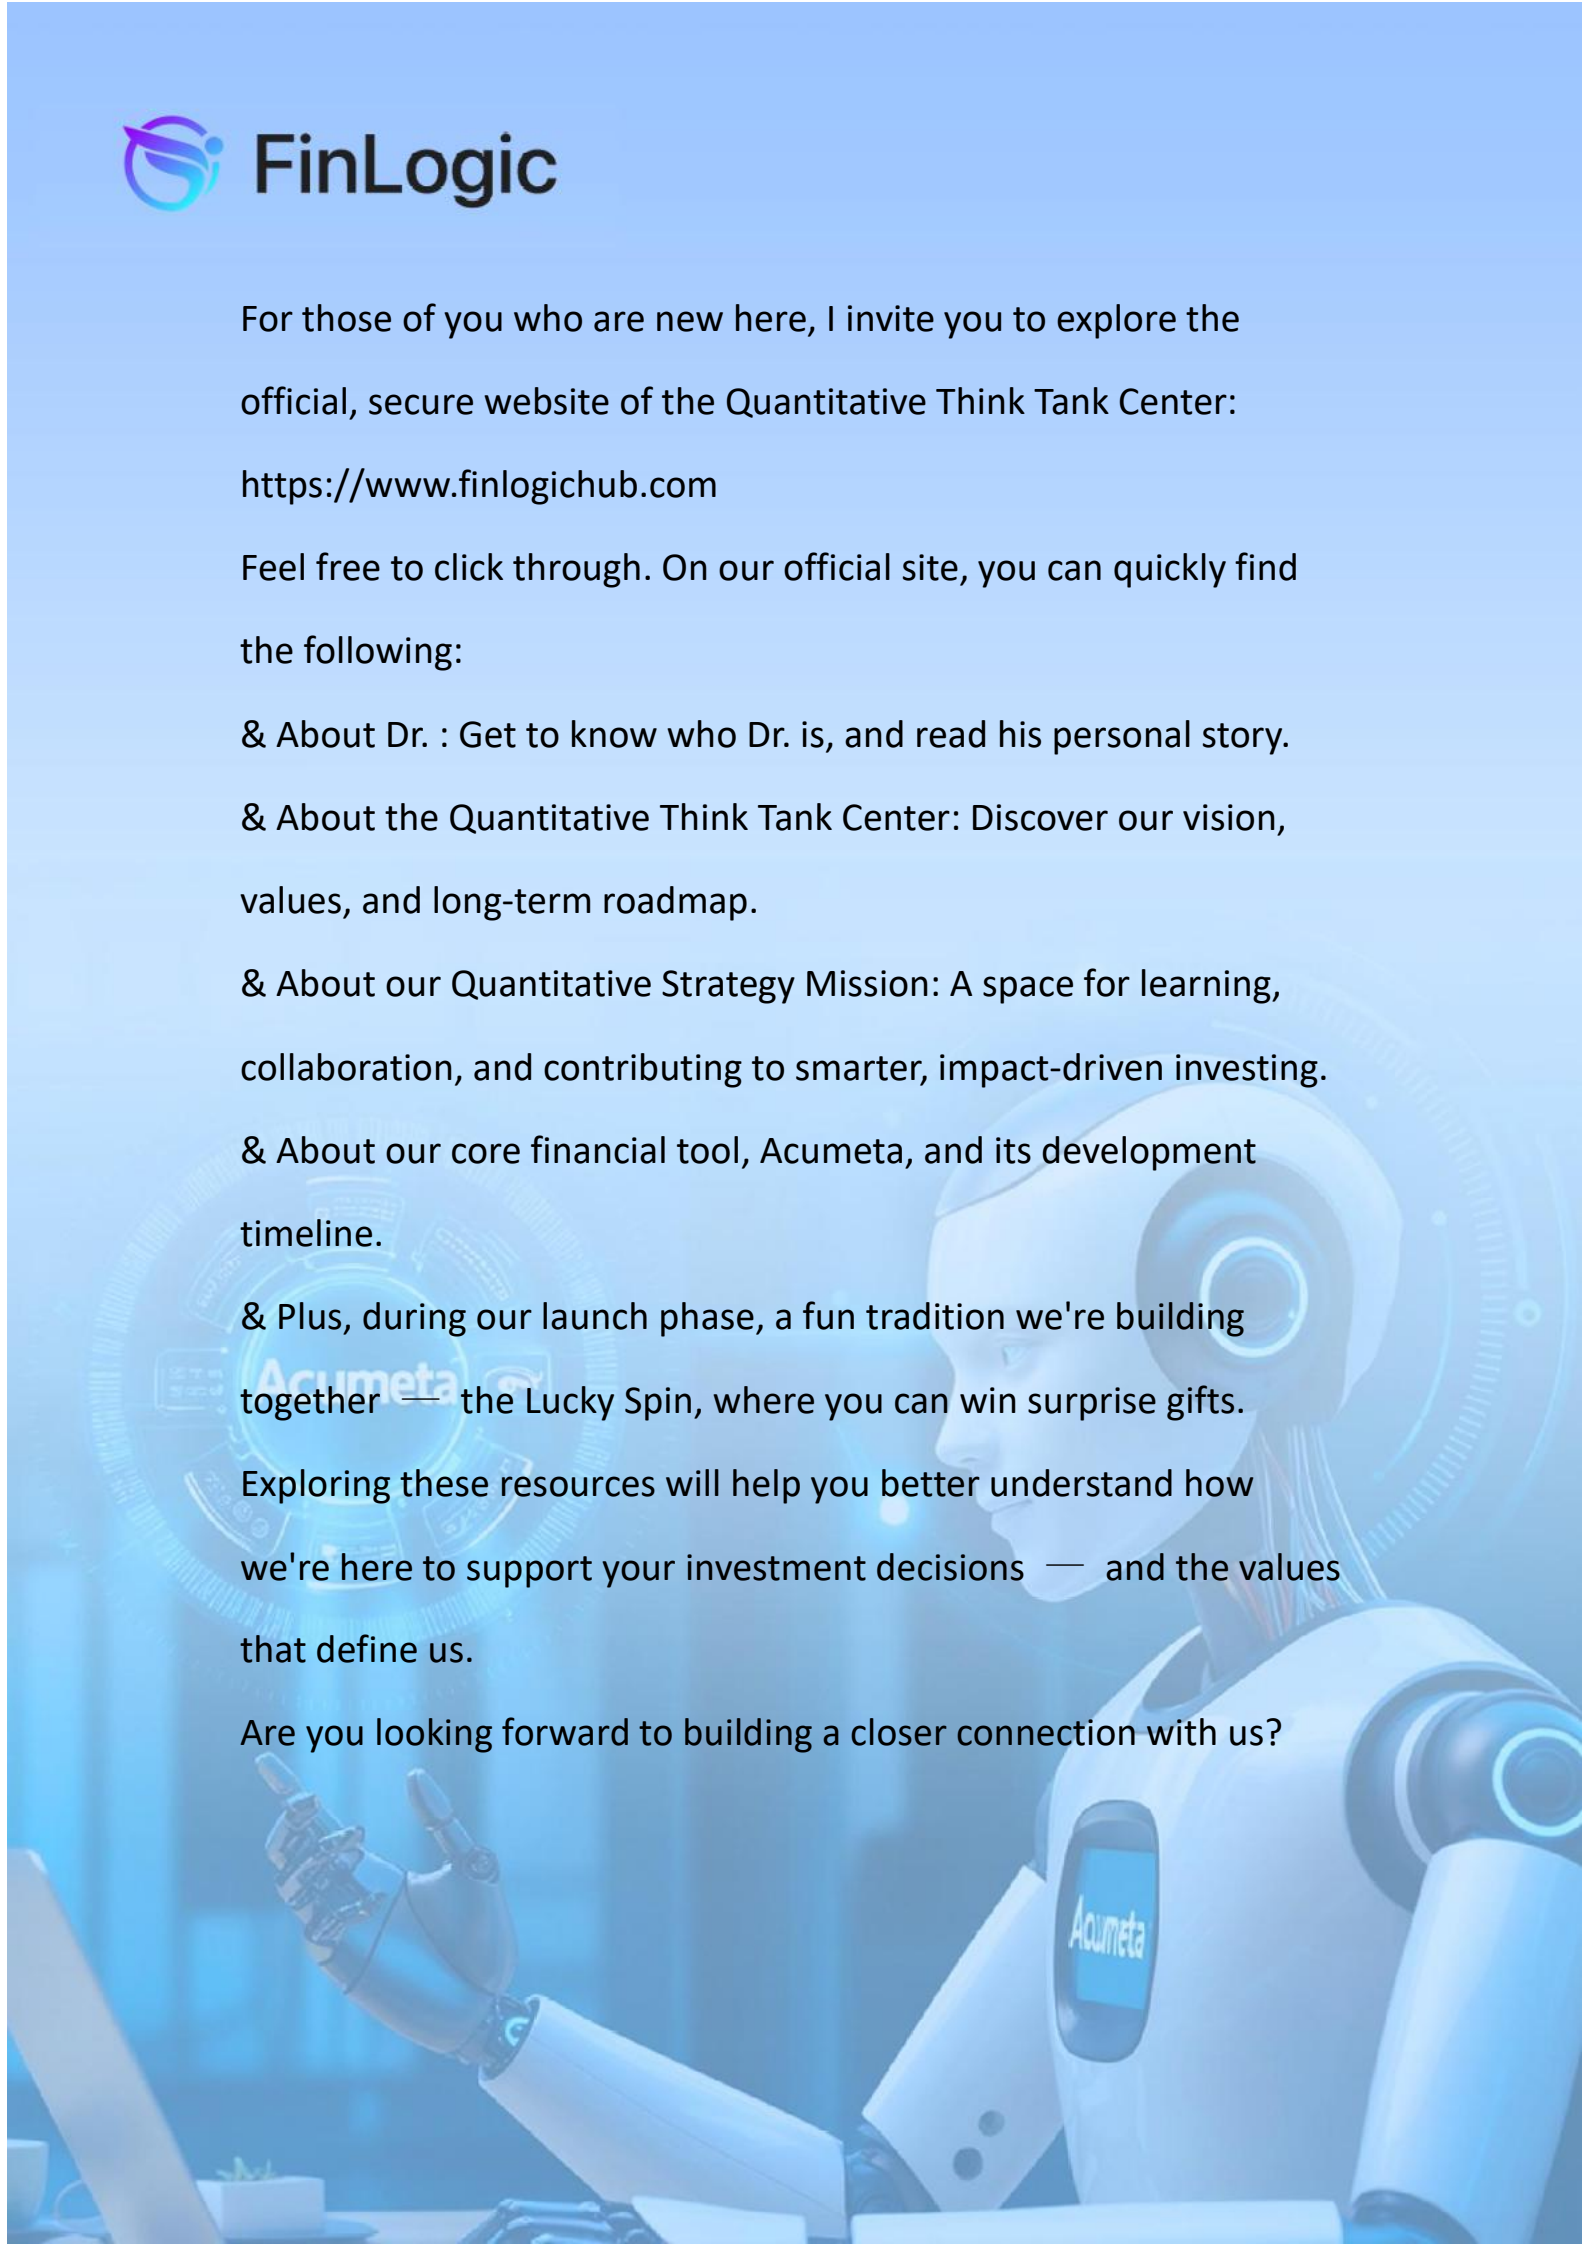

& About our Quantitative Strategy Mission: A space for learning, collaboration, and contributing to smarter, impact-driven investing.

& About our core financial tool, Acumeta, and its development timeline.

& Plus, during our launch phase, a fun tradition we're building together — the Lucky Spin, where you can win surprise gifts.

Exploring these resources will help you better understand how we're here to support your investment decisions — and the values that define us.

Are you looking forward to building a closer connection with us?

Charles H. Sloan

Charles H. Sloan is a discreet yet highly influential American financial expert with over five decades of investment experience. Known for his precise market insights and innovative trading strategies, Charles has deliberately avoided public exposure, choosing instead to focus on providing advisory services to private investors and small funds.

Educational Background

1973: Earned a Bachelor's degree in Economics from Carlisle College, Pennsylvania, specializing in market behavior analysis and international trade.

1976: Earned a Master's degree in Finance from Midwestern University, specializing in derivatives markets and risk management.

1982: Completed a Doctorate in Business Administration at the Southern California Institute of Finance with a dissertation titled, "Behavioral Economic Analysis of Arbitrage Trading."

1990: Awarded an honorary Doctorate by the New England School of Business for his innovative contributions to foreign exchange market models.

Career Highlights

Charles began his career at a small investment bank in Chicago, where he gained recognition for designing precise options trading strategies. In the 1980s, despite lucrative offers from Goldman Sachs and Morgan Stanley, he chose to serve as Chief Investment Officer at a family foundation, crafting bespoke investment plans for private clients.

Charles has maintained a low public profile throughout his career, as he believes fame can interfere with sound professional judgment. His clientele includes family offices, private equity funds, and high-net-worth individuals. His investment portfolio spans traditional stocks, forex trading, and, more recently, the cryptocurrency space.

Contributions to Cryptocurrency

Charles entered the cryptocurrency space in 2010 as an early Bitcoin investor and later emerged as one of Ethereum's earliest supporters in 2013. He has contributed to the design of technical and economic models for several blockchain projects, always under an anonymous identity. Acting primarily as an advisor, Charles views cryptocurrency as the future of financial technology but stresses that its full potential can only be realized under robust regulatory frameworks.

Forex and Stock Trading Achievements

In the forex market, Charles developed the "Dynamic Volatility Arbitrage Model," enabling investors to capitalize on opportunities amidst market uncertainties. Additionally, he successfully predicted the 1987 stock market crash, helping his clients avoid significant losses.

Reasons for Staying Low-Key

Charles remains out of the public eye, guided by his belief that financial markets are shaped by complex individual decisions and that fame could lead to the misinterpretation of his advice. He prioritizes providing high-quality service to a select clientele rather than cultivating a public persona through media appearances.

[About Our Company](#)
[Team Overview](#)

Our founder and mentor at the Quantitative Think Tank Center is Dr. Charles H. Sloan.

The reason we haven't officially launched our Quantitative Strategy Knowledge Program yet is simple — Dr. Charles H. Sloan is currently focused on finalizing a critical stage of Acumeta's development.

Acumeta is a cutting-edge fintech tool designed to process and interpret information across multiple investment areas — from stocks, bonds, and options to digital assets like cryptocurrencies. It

combines trend analysis, chart pattern recognition, market forecasting, and intelligent automated trading — all in one unified system.

We all know that by 2025, Acumeta is positioned to be a standout AI-powered investment solution. AI is no longer a distant concept — it's woven into every corner of our daily lives, transforming how we work, connect, and invest.

I believe it won't be long before you'll have access to more reliable, intelligent tools to support your investment decisions. And even before that, our Investor Education Foundation is working hard to help turn your investment goals into reality.

Are you looking forward to being part of this future?

Although Dr. Charles H. Sloan hasn't officially launched the Quantitative Strategy Course yet, I'll be sharing important day-to-day investment insights with you on his behalf. According to his schedule, he's expected to return by July 10th. When that happens, you can expect more in-depth, professional, and unique perspectives to be shared across our community. I truly hope you'll take every opportunity to absorb the knowledge that adds value to your investment journey.

Here's Dr. Charles H. Sloan's view on the market this Wednesday:

U.S. equities are facing resistance near historic highs but are actively searching for a breakthrough.

Any signals or actions pointing toward rate cuts could become key catalysts for this historic moment.

Today, NVIDIA's annual shareholder meeting highlighted robotics as the next trillion-dollar growth opportunity — reinforcing how critical AI's real-world applications will be in shaping the future.

And that only strengthens the importance of Acumeta as a next-generation financial investment tool.

We are standing at the heart of AI's golden era of applied innovation.

Of course, the brightest spotlight in Wednesday's U.S. market was Bitcoin!

Yes, this is a perfect wave for wealth creation through

cryptocurrency.

Friends who invested around Bitcoin on Wednesday likely saw great success. This trading momentum is inviting strong global capital inflows. Why such enthusiasm?

Growing expectations for Q3 rate cuts — the crypto world eagerly anticipates Federal Reserve easing. Rate cuts mean more dollar liquidity, boosting risk appetite and attracting hedges against a weaker dollar. That's driving continuous Bitcoin purchases.

Bitcoin is becoming a premier reserve asset for the U.S.—yes, the U.S. is diversifying its reserves by buying and holding Bitcoin. This aligns with former President Trump's calls and reflects growing trust in blockchain technology and decentralized ledger systems.

Plus, there's the latest surge in real estate policies—what exactly does that entail?

Today, FHFA Director Pulte announced on social media that, in line with President Trump's vision of making the U.S. the

“cryptocurrency capital,” he has directed Fannie Mae and Freddie Mac to begin preparations to recognize cryptocurrencies as eligible assets for mortgage applications.

After significant studying, and in keeping with President Trump's vision to make the United States the crypto capital of the world, today I ordered the Great Fannie Mae and Freddie Mac to prepare their businesses to count cryptocurrency as an asset for a mortgage.

SO ORDERED

U.S. FEDERAL HOUSING FHFA

**In Re: Order Issuing Directive to Consider
Cryptocurrency as an Asset in Risk
Assessments
(Fannie Mae and Freddie Mac)**

Decision No. 2025-360

Order Issuing Directive to Consider Cryptocurrency as an Asset for Single-Family Loans Delivered to Fannie Mae and Freddie Mac

WHEREAS, Fannie Mae and Freddie Mac (the Enterprises) maintain a pivotal role in the U.S. housing finance system by providing stability and liquidity to the secondary market for residential mortgages through prudent standards to help ensure sustainable, long-term homeownership.

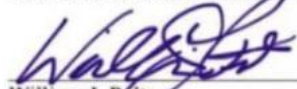

WHEREAS, cryptocurrency is an emerging asset class that may offer an opportunity to build wealth outside of the stock and bond markets.

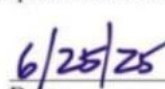

WHEREAS, cryptocurrency has not typically been considered in the mortgage risk assessment process for mortgage loans delivered to the Enterprises, without converting the cryptocurrency to U.S. dollars prior to loan closing.

WHEREAS, U.S. Federal Housing FHFA has now determined that the consideration of additional borrower assets in the Enterprises' single-family mortgage loan risk assessments may enable the Enterprises to assess the full spectrum of asset information available for reserves and to facilitate sustainable homeownership to creditworthy borrowers.

NOW THEREFORE, U.S. Federal Housing FHFA, as conservator, hereby directs each Enterprise to prepare a proposal for consideration of cryptocurrency as an asset for reserves in their respective single-family mortgage loan risk assessments, without conversion of said cryptocurrency to U.S. dollars. Each Enterprise is directed to consider only cryptocurrency assets that can be evidenced and stored on a U.S.-regulated centralized exchange subject to all applicable laws. Additionally, each Enterprise is directed to consider additional risk mitigants per their own assessment, including adjustments for market volatility and ensuring sufficient risk-based adjustments to the share of reserves comprised of cryptocurrency. Prior to implementing any changes, each Enterprise must submit and receive approval from its Board of Directors prior to submitting to U.S. Federal Housing FHFA for review.

This Order is effective immediately and should be implemented as soon as reasonably practical.

William J. Pulte
Director, U.S. Federal Housing FHFA

Date

This directive marks a significant shift in how the U.S. government supports businesses in assessing assets for mortgage qualification. It also aligns closely with the Trump administration's goal to promote widespread adoption of cryptocurrency across America.

Whether or not you personally own Bitcoin, have accepted it before, purchased cryptocurrencies, or hold stablecoins—none of that can stop the dawn of a remarkable crypto era.

This unstoppable shift in wealth—new ways to accumulate it, new forms in which it appears—is heating up across the U.S.

Bitcoin: a name that inspires envy, yet feels both unfamiliar and strangely appealing.

Maybe today you don't own it yet, and there's no rush to do so.

But in the future, holding cryptocurrency will be like holding a form of credit—an ultimate, unshakable trust. After all, to serve as collateral, an asset must have real value. Beyond gold and real estate, now Bitcoin can stand alongside them as collateral.

This is a triumph of blockchain technology, and a victory for everyone pursuing the new revolution of wealth.

Maybe you won't take out a loan, but you will want this vital marker of financial credibility. Owning Bitcoin means owning that mark.

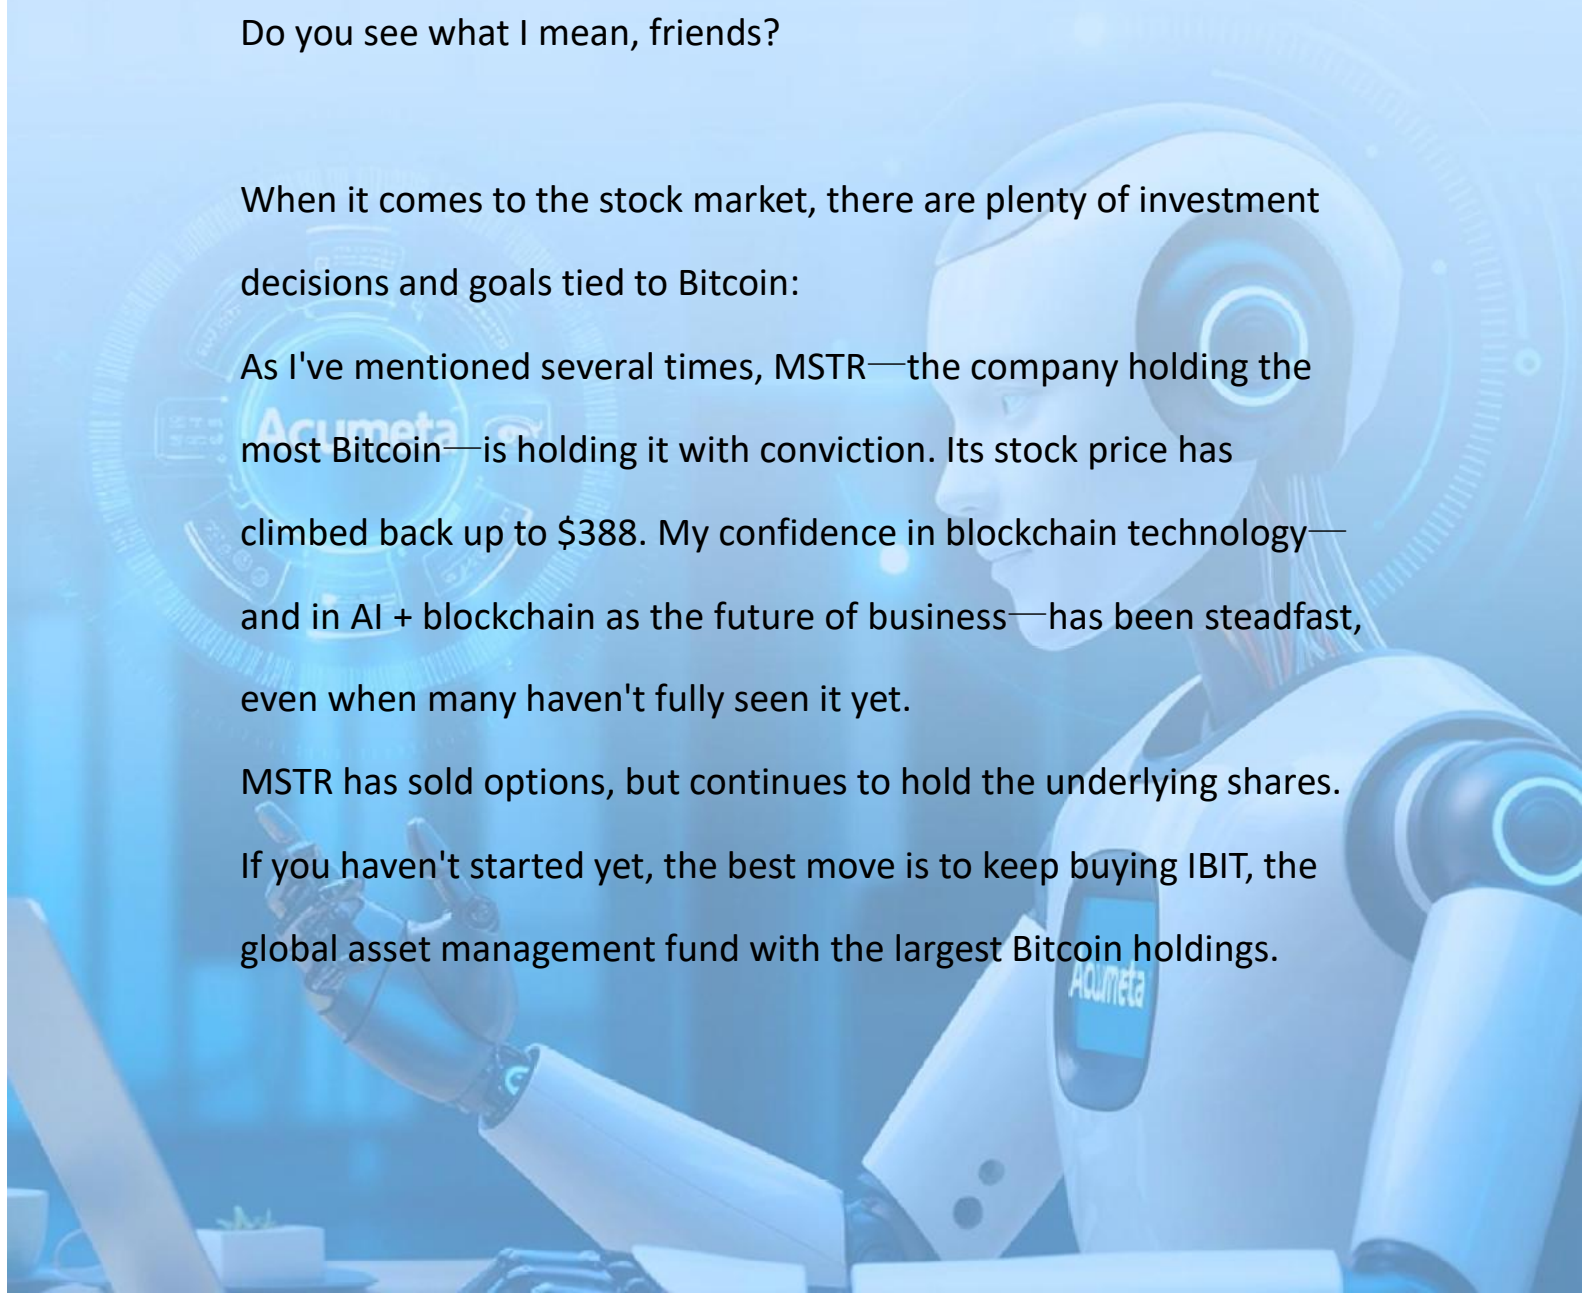

Do you see what I mean, friends?

When it comes to the stock market, there are plenty of investment decisions and goals tied to Bitcoin:

As I've mentioned several times, MSTR—the company holding the most Bitcoin—is holding it with conviction. Its stock price has climbed back up to \$388. My confidence in blockchain technology—and in AI + blockchain as the future of business—has been steadfast, even when many haven't fully seen it yet.

MSTR has sold options, but continues to hold the underlying shares.

If you haven't started yet, the best move is to keep buying IBIT, the global asset management fund with the largest Bitcoin holdings.

For short-term exposure, consider buying call options: IBIT 250718 65.00 CALL.

For mid-term holdings, go straight for the shares: buy IBIT outright.

With the longest validation period ending July 18th, you're on track for a great win. And if not, that's when our compensation-backed validation service kicks in.

UPST 250718 70.00C						
Prev Close Jun 25 15:38:52 ET						
1.70 ↓ -0.97 -36.33%						
High	2.88	Low	1.68	Open	2.88	Prev Close
Volume	919	Turnover	214.25K	Open Interest	3.32K	IV
Expiration	Jul 18, 2025	Days to Exp.	23D	Strike	70.00	Premium

As we're highlighting today, UPST stands out as a nimble, innovative player in financial payments—poised to benefit greatly from upcoming rate cuts and the implementation of stablecoin legislation.

After two days of steady rebounds, the recent pullback actually presents the best buying opportunity.

Beyond buying the stock outright, you can also consider its options: UPST 20250718 70.00 CALL.

Right now, this option is priced around \$1.75.

Option price here means the premium—the cost you pay to purchase one option contract is \$1.75. Meanwhile, the actual stock price hovers around \$65.

What this means is that by buying the option, you're essentially betting that the stock price will rise, which would increase the value of the option's premium. You can then sell the option at a profit.

At the same time, your upfront cost is much lower than buying the stock itself. This is the essence of short-term trading.

But whether you choose options or shares, the expectation is the same: UPST is set to go up.

Do you see how to approach both stocks and options strategically?

Friends, huge thanks to Dr. Charles H. Sloan for another round of insightful post-market analysis this Wednesday!

Both pre-market and after-hours trading hold hidden strategies and real wealth-building opportunities. If you're curious about those, stay tuned — Dr. Charles H. Sloan will be launching the Quantitative Strategy Course when he returns.

And for those of you already intrigued by stock options, feel free to reach out to me anytime. The truth is, any stock with real trading potential — especially the ones grabbing attention — is perfect for exploring options strategies.

Why? Because options offer lower upfront costs, faster results, and higher profit potential.

Of course, if this still feels like new territory for you — that's exactly why we're here. Keep following our Quantitative Strategy Training, and I promise, your investment skills will grow exponentially. With Acumeta by your side, it'll be hard to fail.

Another perfect day wraps up, but our connection doesn't end here. Let's keep exploring new stories of wealth and creating extraordinary value — see you Thursday, and good luck!
