

Monday, June 30, 2025

Dear friends,

The first half of 2025 has quietly come to an end. Today is also the last trading day for U.S. stocks in the first half of the year.

Looking back over these past six months, the market has been full of ups and downs. Geopolitics and policy changes continue to intertwine. But our quantitative strategies have remained steady, advancing step by step—cutting through emotions and noise to capture real structural opportunities.

Whether you've already achieved solid returns, or are still patiently waiting for a breakthrough—today marks an important moment to reflect, summarize, and recharge.

We are full of anticipation for July, and hold even greater strategic confidence for Q3 and the second half of the year.

Follow our strategy, stay aligned with the key trends, and let your capital grow with the right rhythm—and evolve through the inevitable fluctuations.

This contest of wisdom and execution has only just begun.

May we walk this journey together in the second half of the year, and move toward a path of real, meaningful wealth growth.

Who are we?

I'm a quantitative advisor at the FinLogic Quantitative Think Tank Center and an assistant to Dr. Charles H. Sloan. I'm truly glad that in the long journey ahead, we'll be connecting here to explore different ways and paths to grow our wealth. Clearly, today marks the beginning of a long-term connection between you and me — and that's something to appreciate.

I'm Lauren D. Miller, and if you ever have any questions or uncertainties, please feel free to reach out to me anytime. I also warmly welcome you to introduce more investors to join us in exploring these investment topics together.

Investing is exciting — but the factors that influence our investments often bring frustration.

FinLogic

With equity index futures showing strength in the pre-market session, as we approach the final battle of June and the passionate start of July, the question is: how can we capture even more wins? On behalf of Dr. Charles H. Sloan, I'll continue to organize and share his investment insights. Keeping the conversations and explorations within our community alive will make this journey even more meaningful.

Charles H. Sloan is a discreet yet highly influential American financial expert with over five decades of investment experience. Known for his precise market insights and innovative trading strategies, Charles has deliberately avoided public exposure, choosing instead to focus on providing advisory services to private investors and small funds.

Educational Background

1973: Earned a Bachelor's degree in Economics from Carlisle College, Pennsylvania, specializing in market behavior analysis and international trade.

1976: Earned a Master's degree in Finance from Midwestern University, specializing in derivatives markets and risk management.

1982: Completed a Doctorate in Business Administration at the Southern California Institute of Finance with a dissertation titled, "Behavioral Economic Analysis of Arbitrage Trading."

1990: Awarded an honorary Doctorate by the New England School of Business for his innovative contributions to foreign exchange market models.

Career Highlights

Charles began his career at a small investment bank in Chicago, where he gained recognition for designing precise options trading strategies. In the 1980s, despite lucrative offers from Goldman Sachs and Morgan Stanley, he chose to serve as Chief Investment Officer at a family foundation, crafting bespoke investment plans for private clients.

Charles has maintained a low public profile throughout his career, as he believes fame can interfere with sound professional judgment. His clientele includes family offices, private equity funds, and high-net-worth individuals. His investment portfolio spans traditional stocks, forex trading, and, more recently, the cryptocurrency space.

Contributions to Cryptocurrency

Charles entered the cryptocurrency space in 2010 as an early Bitcoin investor and later emerged as one of Ethereum's earliest supporters in 2013. He has contributed to the design of technical and economic models for several blockchain projects, always under an anonymous identity. Acting primarily as an advisor, Charles views cryptocurrency as the future of financial technology but stresses that its full potential can only be realized under robust regulatory frameworks.

Forex and Stock Trading Achievements

In the forex market, Charles developed the "Dynamic Volatility Arbitrage Model," enabling investors to capitalize on opportunities amidst market uncertainties. Additionally, he successfully predicted the 1987 stock market crash, helping his clients avoid significant losses.

Reasons for Staying Low-Key

Charles remains out of the public eye, guided by his belief that financial markets are shaped by complex individual decisions and that fame could lead to the misinterpretation of his advice. He prioritizes providing high-quality service to a select clientele rather than cultivating a public persona through media appearances.

About Our Company

Team Overview

To learn more about Dr. Charles H. Sloan and our Quantitative Think Tank Center, you can visit our official secure platform for a more comprehensive understanding. Please click here:

<https://www.finlogichub.com>.

Dr. Charles H. Sloan founded the Quantitative Think Tank Center with the vision of building the Acumeta brand, enhancing quantitative trading capabilities, and integrating AI's reasoning power with large-scale data analysis for real-world application—ultimately creating objective, data-driven investment tools that can benefit investors worldwide.

Over the long journey ahead, we will continue to validate Acumeta's practical effectiveness through a wide range of strategies—including stock trading, options trading, cryptocurrency markets, and government bonds. At the same time, I encourage you to actively participate and witness the outcomes for yourself.

The advantage of broader participation is simple yet powerful: the more we expand the real-time data used for training, the more we can optimize and strengthen the system's long-term investment performance.

Our Quantitative Think Tank Center is committed to providing you

with advanced knowledge in quantitative strategies and high-level investment trading. Of course, you are welcome to engage actively, share all your thoughts and feedback on our strategies — I'm always happy to explore these ideas with you.

Beyond learning, you should also benefit from real trading results — because that's an essential part of growing your wealth.

To provide both security and reliable investment insights, we've implemented a compensation-backed stock trading verification mechanism.

What does compensation-backed stock trading mean?

The idea is simple — we provide a basic safety guarantee. As long as you strictly follow all the decision-making requirements based on the quantitative strategies provided by our doctor and his team, and apply them to your actual trades, you'll be entitled to a defined quantity of stock purchases within the agreed timeframe. If there are losses on those shares, compensation will be provided.

This allows you to participate in all future trades with confidence and peace of mind.

Why do we offer this compensation-backed trading service?

As an emerging Quantitative Think Tank Center, through years of building this platform, we've discovered a powerful approach to

creating real market impact — that is, growing together with our users.

Instead of focusing our resources on traditional advertising, we choose to reinvest those costs into building trust with our users — through interaction, real value, and multi-dimensional safeguards for your trading experience. That's why we're willing to share these benefits with you.

We believe investment results should be positive, resilient, and built to withstand real-world tests. At the same time, we want you to experience the full spectrum of what smart, responsible investing can offer. That's exactly why we created this compensation-backed stock trading service. Does that make sense now, my friends?

If you decide to participate in our stock trading program, please make sure to follow the relevant trading guidelines and send me screenshots as proof of your trades. This will help ensure your eligibility for compensation under the guaranteed protection mechanism in the future.

Monday marks not only the final trading day of June but also the close of the first half of the year. Let's take a look at how Dr. Charles H. Sloan interprets the outlook for July and where to find opportunities for wealth growth and Q3 market trends.

Based on Acumeta's historical data analysis, July has often shown relatively strong performance in U.S. equity markets.

So, what should we be paying attention to this week?

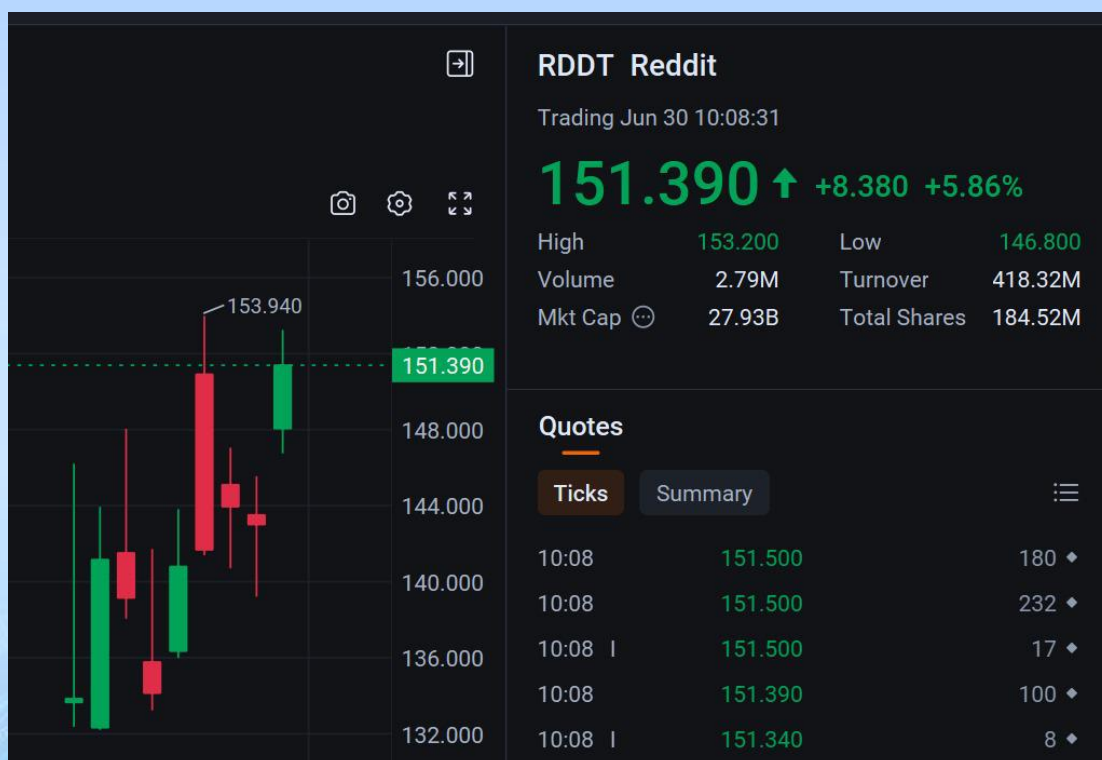

1. Will the “America Beautiful Act” be passed?
2. Will the July 9th tariff negotiation deadline be extended?
3. How will Friday's Non-Farm Payroll data shape market expectations for interest rate cuts?
4. What new growth opportunities might emerge from the crypto market? And how will the tech sector's momentum create broader opportunities?

Today, let's dive into these key topics together and work toward sharp, effective analysis and confident trading decisions.

Compensation-Backed Stock Verification Program Update:

First, let's focus on the two key stocks we've been validating through the compensation-backed plan since last week: RDDT and

Looking at their performance after the U.S. market opened, both stocks have indeed generated profits, although the current profit scale remains relatively small.

Because you participated in a compensation-backed verification approach, this validation confirms that Acumeta's judgments are accurate, reliable, and efficiently valuable.

Therefore, today I want to once again congratulate all community members who met the trading participation conditions. I officially declare that your verification has achieved a significant milestone. Although this will no longer trigger compensation-backed payouts, we will continue to reward your efforts in the future through tokens issued by the Quantitative Think Tank Center.

FinLogic

Whether you hold options or the stocks themselves, you have realized profits.

Acumeta Backstop Verification Service Details

Symbol	Profit Status	Backstop Description	Trigger Date	Outcome
PDD	Profit	Sell Alert	Jul 4	Success
CLSK	Profit	Sell Alert	Jul 11	Success
IWY/PFF	Profit	Cash Cow, Dividend Holding	Short-term	Success
MSTR	Options Profit		Short-term	Success
BIT	Profit	Stock/Option Buying	Short-term	Success
DDT	Profit	Short-term	Short-term	Success

Why doesn't our compensation-backed verification plan promise specific profit targets?

1. Because stock market volatility is inherently uncertain, our primary goal with this verification process is to evaluate Acumeta's training effectiveness and real-world application from a short-term perspective.
2. By gathering large-scale data samples from many participating users, we can more efficiently enhance Acumeta's ability to optimize short-term trading behavior within market fluctuations.
3. Since these quantitative strategy signals are short-term stock trading suggestions and provided as a free service, we cannot

promise short-term profits.

4. The core purpose of your participation is to help validate the value of our strategies. You are free to choose whether to expand your future involvement in stock trading, but our compensation-backed program will always have participation limits.

5. We are building long-term credibility, and yes, we aim to expand wealth creation, but right now, what matters most for this verification process is reliable data support. That's why we don't commit to specific profit targets during trades — although we may offer expected performance guidance.

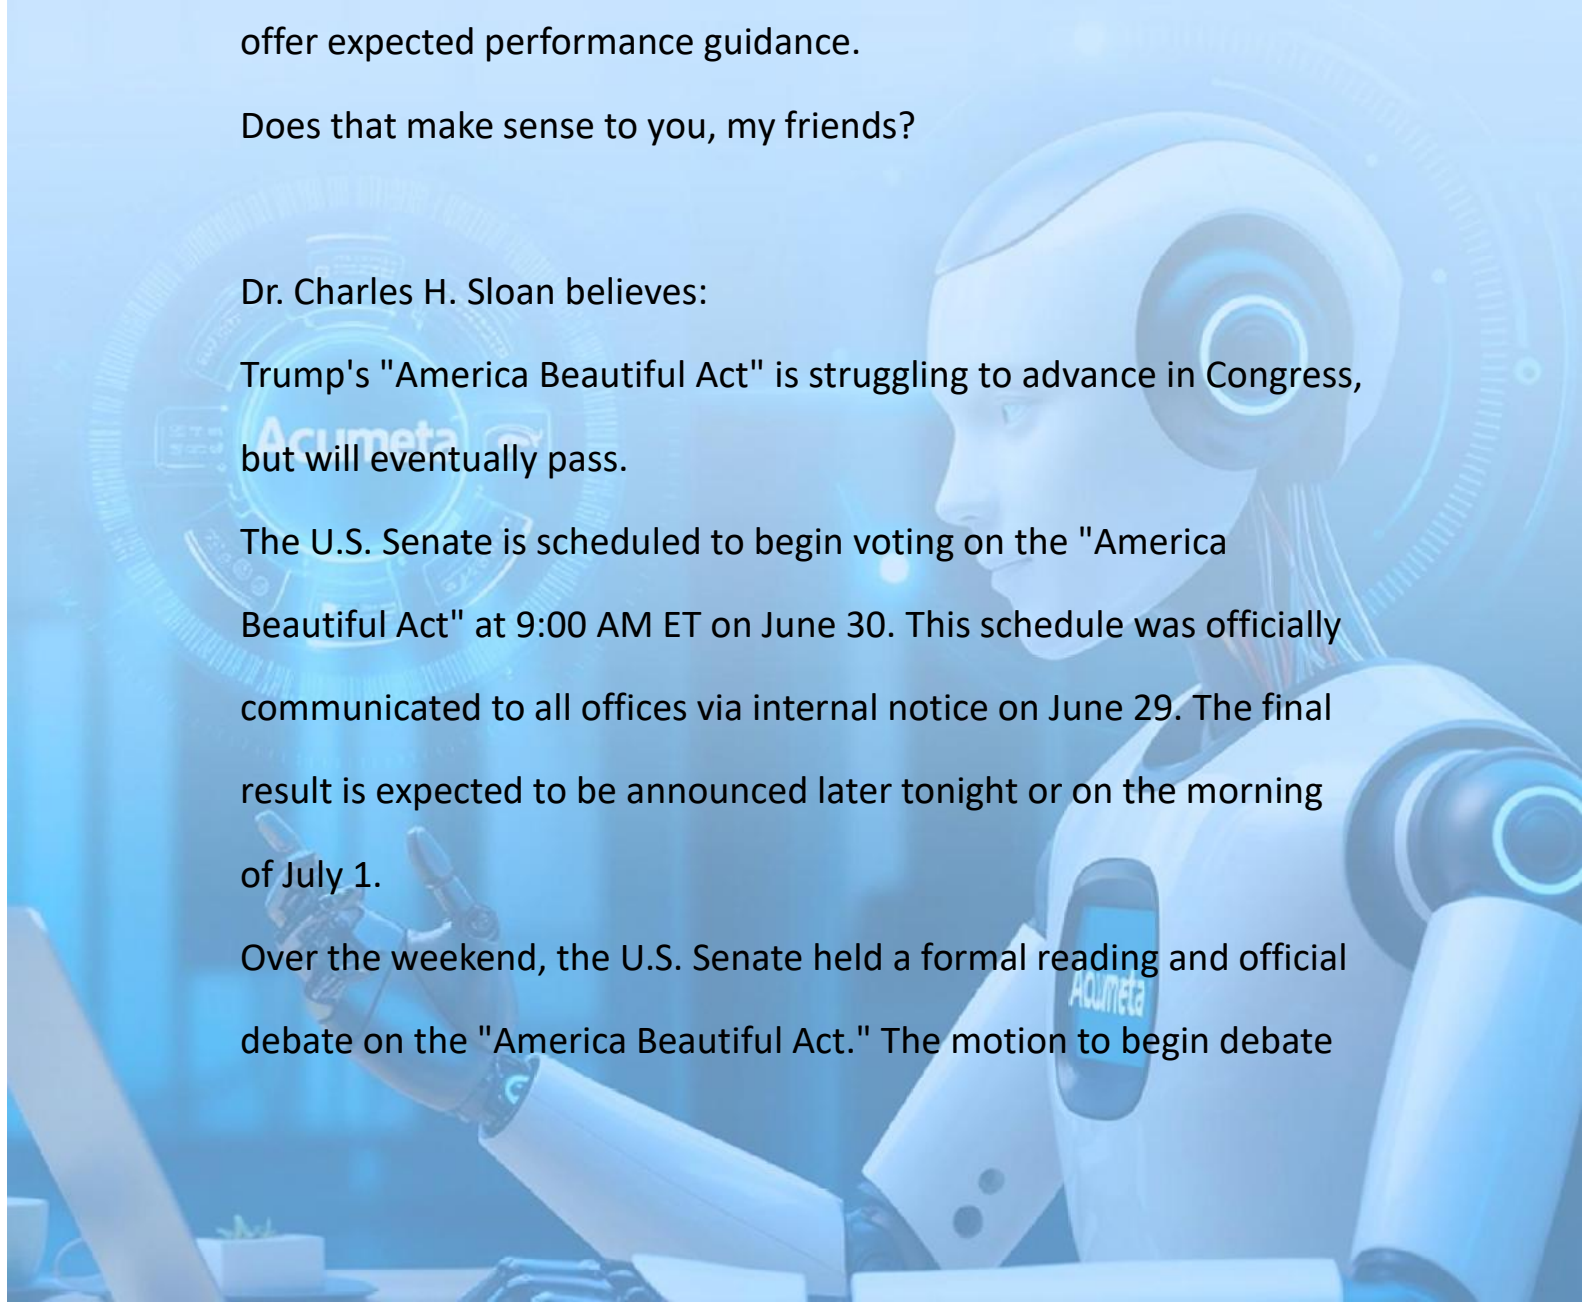

Does that make sense to you, my friends?

Dr. Charles H. Sloan believes:

Trump's "America Beautiful Act" is struggling to advance in Congress, but will eventually pass.

The U.S. Senate is scheduled to begin voting on the "America Beautiful Act" at 9:00 AM ET on June 30. This schedule was officially communicated to all offices via internal notice on June 29. The final result is expected to be announced later tonight or on the morning of July 1.

Over the weekend, the U.S. Senate held a formal reading and official debate on the "America Beautiful Act." The motion to begin debate

narrowly passed with a 51-49 vote.

Although Republican senators barely secured enough votes to start the debate, the final passage of the bill remains uncertain. Its potential to create massive new debt has sparked concerns both inside and outside the party. Elon Musk called the bill "absurd and destructive." Divisions between hardliners and moderates within the Republican Party remain unresolved, and some senators who are not seeking re-election have voted against the bill.

Why will it inevitably pass?

The reason is actually quite simple — the most effective way to address the U.S. debt crisis is to issue new Treasury bonds.

Think of it this way: if you borrowed \$10,000 from Mr. A, and when it comes due you have to repay both the principal and interest — but you don't have enough cash or savings — what do you do?

You borrow more money from Mr. B to pay off the debt owed to Mr. A.

That's exactly what's happening. The \$6 trillion in U.S. debt maturing this year will inevitably trigger an increase in the debt ceiling.

The tax cut policies within this bill? That's just a smokescreen — a way to build political support. But at its core, the real goal is to raise

the debt ceiling, which allows for the issuance of new Treasury bonds.

In other words, it means the U.S. government can go find its "Mr. B" — borrow more money to repay existing debts. The underlying logic is that straightforward.

In addition, ahead of the July 9 tariff deadline, Trump will continue to push for tariff negotiations — but extensions are likely to continue. This is exactly in line with what we call the “TACO” pattern, which tends to favor both the stock market and the crypto market.

What's TACO?

It's a popular slang acronym for “Trump Always Chickens Out.”

Why are tariff extensions so likely? The reasoning is simple, and when we break it down to the core logic, the answer becomes clear: they simply cannot afford to trigger inflation expectations — or at least, inflation must only evolve moderately.

That's the only way to secure rate cuts from the Federal Reserve.

And those rate cuts are essential to support the issuance of new U.S. Treasury bonds.

So, can we assume that this Friday's Non-Farm Payroll data will

support a Fed rate cut?

Yes — based on both my personal assessment and Acumeta's integrated big data analysis, I believe there's a high probability that the jobs market will show signs of weakness, while the unemployment rate holds steady.

The intended signal is clear: labor market pressure is contributing to economic stagnation, forcing the Fed to lower rates.

Now, if the employment data comes in weak but controlled, the Fed is likely to hold rates steady in July and wait until September to cut.

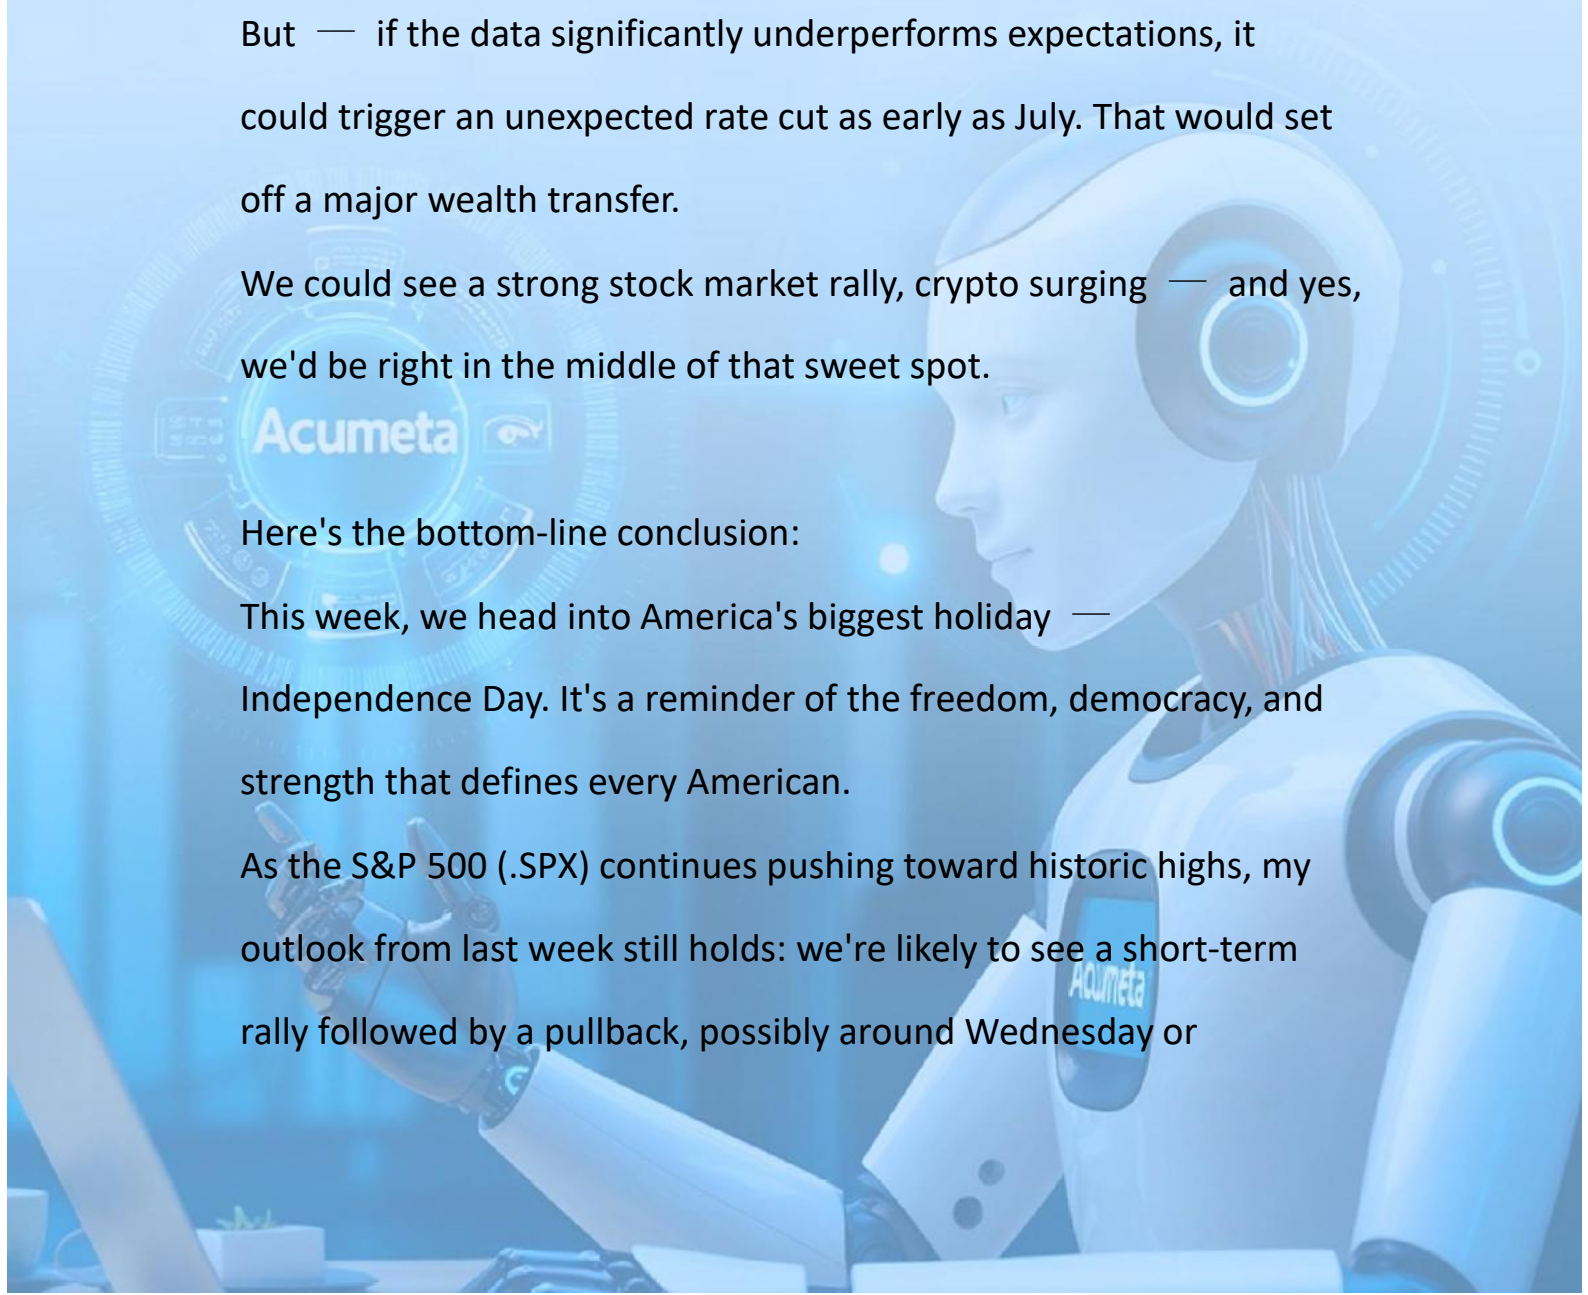

But — if the data significantly underperforms expectations, it could trigger an unexpected rate cut as early as July. That would set off a major wealth transfer.

We could see a strong stock market rally, crypto surging — and yes, we'd be right in the middle of that sweet spot.

Here's the bottom-line conclusion:

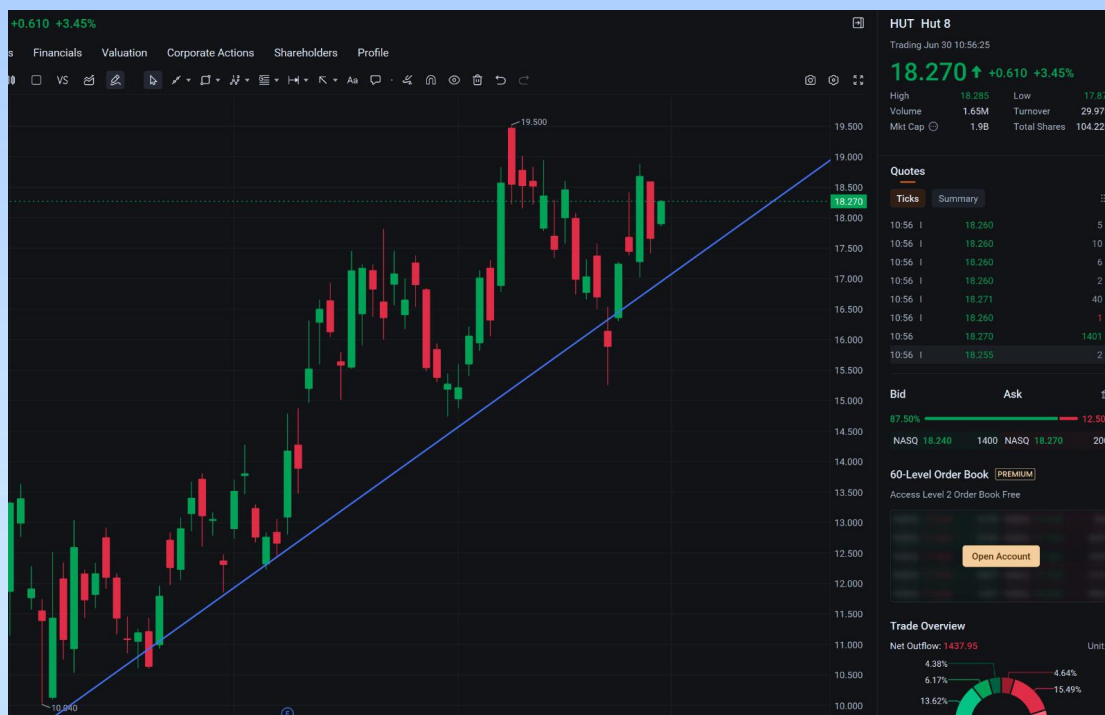

This week, we head into America's biggest holiday — Independence Day. It's a reminder of the freedom, democracy, and strength that defines every American.

As the S&P 500 (.SPX) continues pushing toward historic highs, my outlook from last week still holds: we're likely to see a short-term rally followed by a pullback, possibly around Wednesday or

Thursday. That's often when pre-holiday selling pressure kicks in, as investors look to reduce exposure.

So, we'll stay disciplined with position sizing and execute forward-looking strategies — no emotional reactions.

Today, we'll continue with our compensation-backed trades:

Hedging Strategy:

UVXY/UVIX — to preemptively protect against rising fear sentiment, especially ahead of major economic data or policy decisions. Both ETFs are trading near historical lows, ideal for short-term overnight positions. Keep your purchase under 100 shares.

Options Strategy:

UVXY 250711 20.00 CALL — Premium is \$0.70 per share.

Suggested position: 3 contracts.

Second Validation Target:

Underlying Stock: HUT

Options Signal: HUT 250718 20.00 CALL — Premium is \$0.70 per share. Suggested position: 5 contracts.

Please follow the recommended quantitative strategy for these trades. Don't forget to send a screenshot to my assistant for registration — that's how you'll secure your compensation-backed validation!

July on Wall Street always burns with intensity.

But when that market heat meets the cool precision of our quantitative strategies — it becomes nothing short of an extraordinary wealth journey.

This isn't luck; it's the resonance between algorithms and market trends.

It's not speculation; it's calculated probability backed by data.

While most people are still hesitating, watching, second-guessing — our decisions are already made, our positions taken, our advantage secured.

This July, we're not chasing the wave — we are the ones shaping it.

Let's let discipline steer the boat, conviction power the sail, and together sail toward the victory that belongs to this new generation of investors. There's no better moment to take action — than right now.

Friends, my thanks as always to Dr. Charles H. Sloan for the brilliant insights shared each day. And to everyone new joining our community at the Quantitative Think Tank Center — welcome.

You're not just here to witness the momentum — you're here to benefit from it.

I'm your quantitative advisor — meet you again this afternoon!

Good afternoon, friends,

A warm welcome to our new community members — I hope you've found a space here that feels like home for your investment journey.

This week, we're stepping into an exciting moment together, with plenty of positive momentum fueling the U.S. markets. It's been incredible to witness the S&P 500 pushing toward historic highs —

6200 is no longer some distant target. We've always believed in following the pulse of America's financial breakthroughs.

Maybe you're hesitating, maybe market risks make you anxious — but that's exactly why this space exists. We're building solutions for those questions, together.

We're moving forward on a path that feels both steady and rewarding. As a quantitative research hub with a mission to help investors explore opportunities that shape the future of humanity, we stay committed to building a brand you can genuinely trust.

Of course, this is only where the dream begins. At Acumeta, we're relentlessly searching for ways to ease the anxiety that comes with investing. Stay tuned — let's test and validate this space together.

If you've just joined our Quantitative Strategy Interactive Group — welcome. This community is built to share long-term, high-efficiency, value-driven investment strategies, and for the next few months, all of this will be offered to you free of charge.

The purpose behind this is simple — we want to create a space for direct, transparent communication with every one of you. Hearing your feedback matters — whether it's about our quantitative strategies, about Acumeta, about our analyst team, or the real performance of our investment results. Your objective insights help

us keep improving based on facts, not assumptions.

I truly believe that in the coming months, through practical, real-market experience, we will naturally draw more attention from thoughtful investors. At the same time, we're building the brand value of our FinLogic Quantitative Think Tank Center.

Bringing Acumeta to more investors, and letting more people experience it firsthand — that's what drives us forward every single day.

Dear friends, for official and secure access, please visit our website:
<https://www.finlogichub.com>.

I look forward to sharing this new era of AI-powered quantitative investing with you — and celebrating the wealth opportunities it brings, together.

The FinLogic Quantitative Think Tank Center places equal emphasis on technological advancement and investor education.

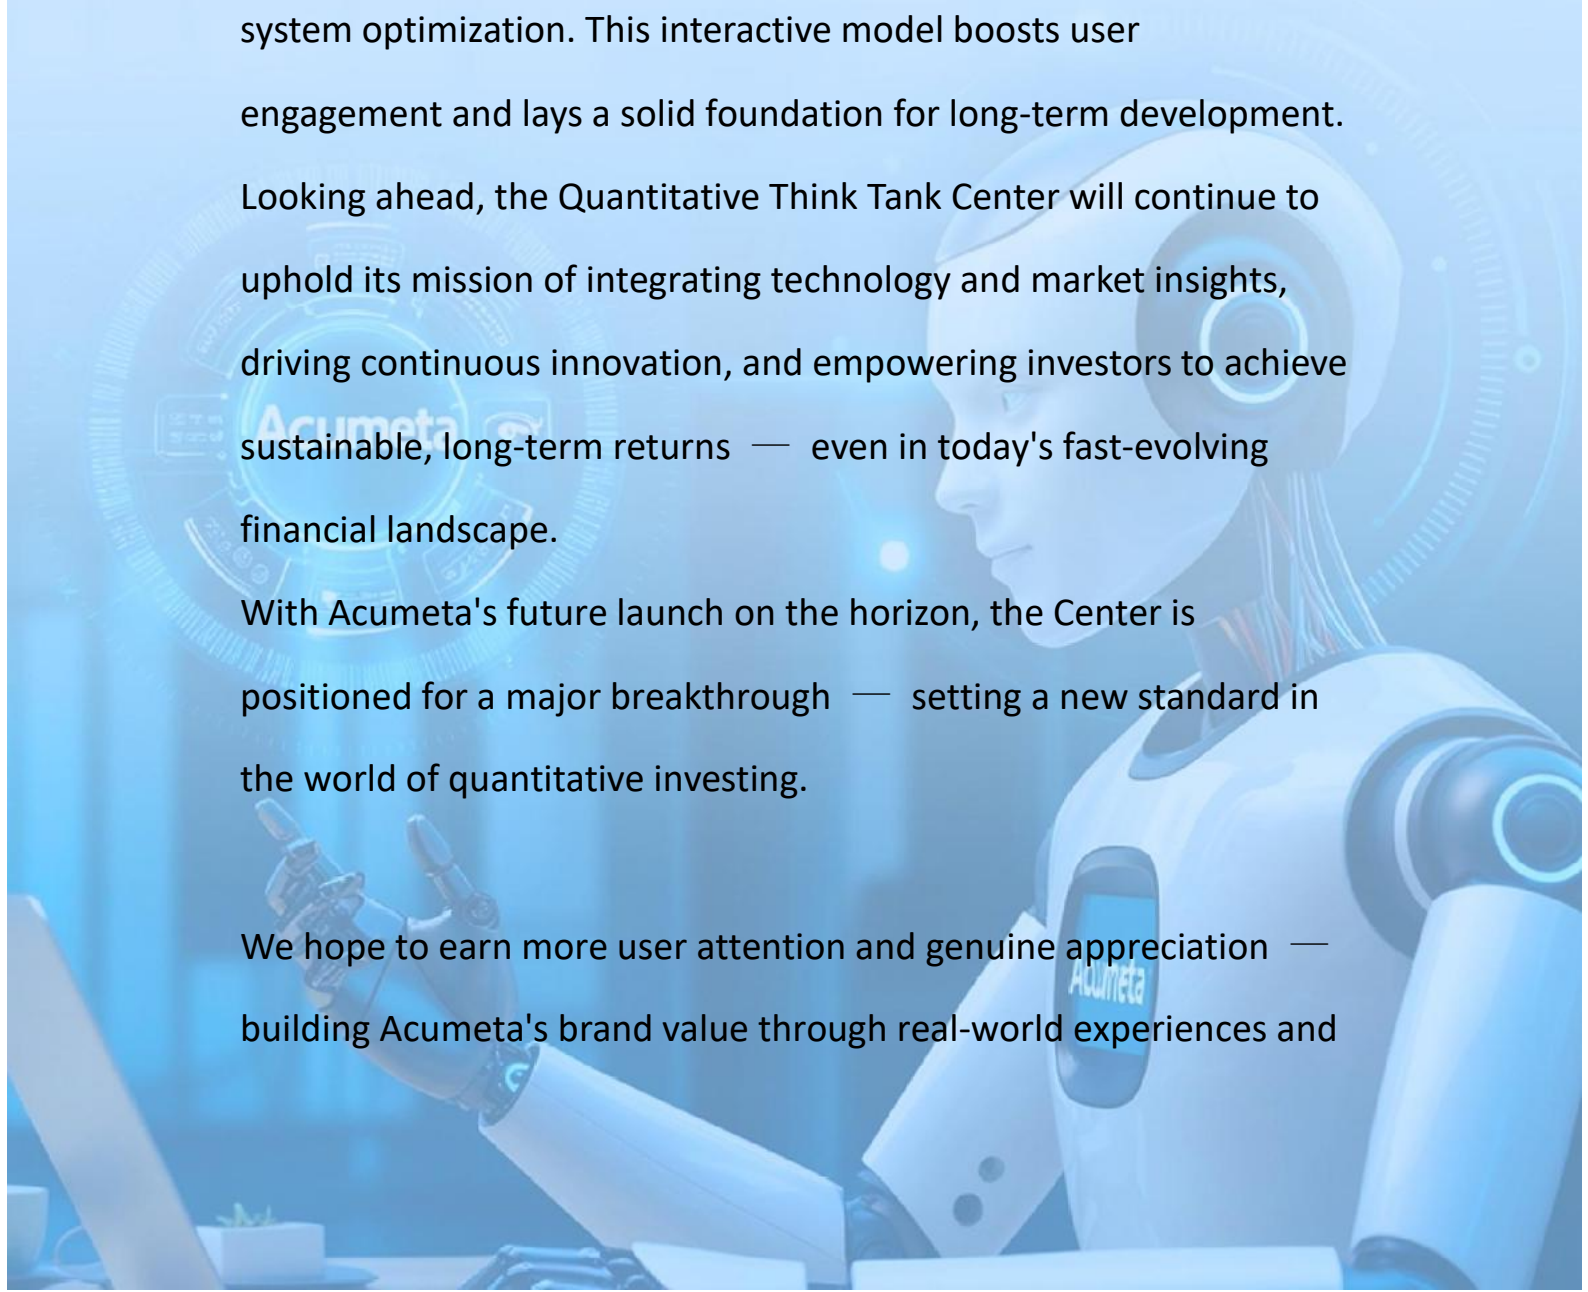

Through tailored courses and user training, we teach the principles of quantitative investing and the practical application of cutting-edge tools — helping investors maximize the value of Acumeta. These efforts not only build deeper user trust but also strengthen Acumeta's core competitiveness in the market.

To foster a vibrant, engaged community, the Center has created an open, transparent, and highly efficient interactive platform. With a universal token design, users can actively participate in decision-making, share in the platform's value, and contribute to system optimization. This interactive model boosts user engagement and lays a solid foundation for long-term development. Looking ahead, the Quantitative Think Tank Center will continue to uphold its mission of integrating technology and market insights, driving continuous innovation, and empowering investors to achieve sustainable, long-term returns — even in today's fast-evolving financial landscape.

With Acumeta's future launch on the horizon, the Center is positioned for a major breakthrough — setting a new standard in the world of quantitative investing.

We hope to earn more user attention and genuine appreciation — building Acumeta's brand value through real-world experiences and

authentic word-of-mouth from our community. At its core, Acumeta is designed to be a high-tech investment support product, proven and refined through practical market testing.

More importantly, looking ahead, our Quantitative Think Tank Center is positioned for high-valuation acquisitions — whether through direct buyouts, reverse mergers, or being acquired by major industry players. These types of buyouts are quite common in the U.S., especially under initiatives like The Stargate Project, which creates better pathways for emerging technologies to scale with institutional support.

To achieve this ambitious vision, we must drive Acumeta to exceed a \$3 billion valuation.

That's why we are focused on building a Quantitative Think Tank Center with rapid value growth — anchored in real technical strength and expanding market share to create even greater value.

Right now, we are still in a strong growth phase. But I truly believe that with our shared commitment and the way we push each other to excel, that day will come sooner than we think.

After all, the remarkable Stargate Project is reshaping AI's role as the new economic engine across real-world applications — unlocking limitless potential and value.

Donald J. Trump  
@realDonaldTrump · 44s

Jerome "Too Late" Powell, and his entire Board, should be ashamed of themselves for allowing this to happen to the United States. They have one of the easiest, yet most prestigious, jobs in America, and they have FAILED — And continue to do so. If they were doing their job properly, our Country would be saving Trillions of Dollars in Interest Cost. The Board just sits there and watches, so they are equally to blame. We should be paying 1% Interest, or better!

When we understand how to win, we keep moving forward — leading every member of our community to explore quantitative strategies and decision-making signals that go beyond the limits of human investing.

Before Dr. Charles H. Sloan returns to host a new series of quantitative investment strategy courses, I'll continue supporting all of you — sharing the most real, up-to-date market analysis and carrying forward Dr. Charles H. Sloan's guidance.

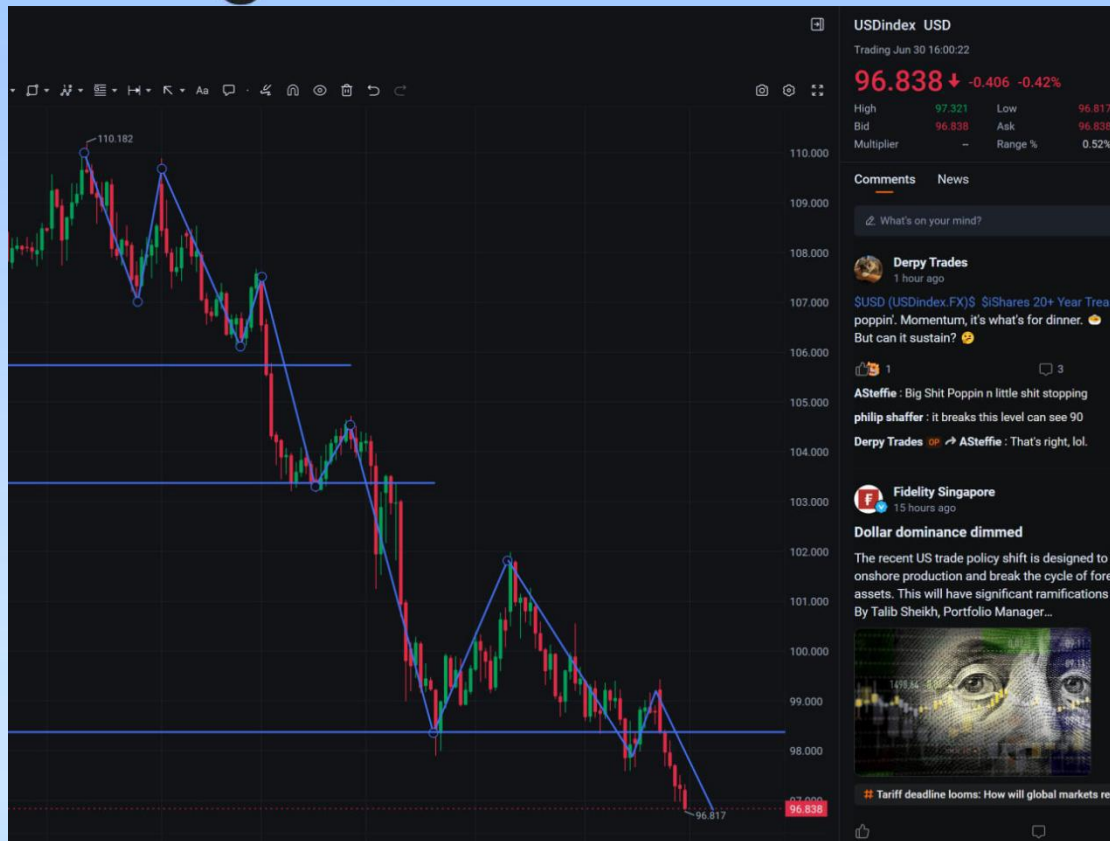

This Monday marks the final trading day of the first half of the year.

We've observed a sharp, one-sided decline in the U.S. Dollar Index.

What kind of investment signals could this weakening trend reveal?

And how might it impact the U.S. stock market?

Let's use this as a starting point for our post-market analysis and insights. I invite you to join us and hear Dr. Charles H. Sloan's perspective on what lies ahead.

First, let's understand — what exactly is the U.S. Dollar Index?

Think of the Dollar Index as the “health report” or “strength barometer” for the U.S. dollar.

It doesn't just measure how the dollar performs against one specific currency — instead, it reflects the dollar's overall value compared to a basket of major global currencies. Through a weighted average (meaning each currency in the basket carries a different level of importance), we calculate a single number that represents the dollar's comprehensive strength.

Picture this: Imagine your neighborhood is like a small market, where people — adults and kids alike — are constantly exchanging goods. You hold U.S. dollars in your hand, but you want

to know — is your dollar gaining value compared to what your “neighbors” hold? Is your purchasing power getting stronger, or is it weakening?

When the Dollar Index goes up, it means the U.S. dollar is strengthening overall against that basket of currencies — the dollar is appreciating, and your purchasing power increases.

When the Dollar Index goes down, it signals the dollar is weakening overall — it's depreciating, and your purchasing power decreases.

For example, if the Dollar Index rises from 100 to 102, it means the dollar has appreciated by 2% relative to those six major currencies.

If you hold U.S. dollar-denominated assets like U.S. stocks or bonds, a stronger dollar makes those assets more valuable when converted back into other currencies.

On the flip side, if the Dollar Index falls from 100 to 98, it reflects a 2% depreciation of the dollar. For international investors holding dollar-based assets, currency fluctuations like this can reduce the value of their portfolios when exchanged into their local currencies.

U.S. Treasury yields — especially short-term yields — are often seen as a benchmark for the so-called “risk-free rate.”

In simple terms, when you buy U.S. Treasuries and earn higher interest, it naturally attracts global capital into the U.S. But when

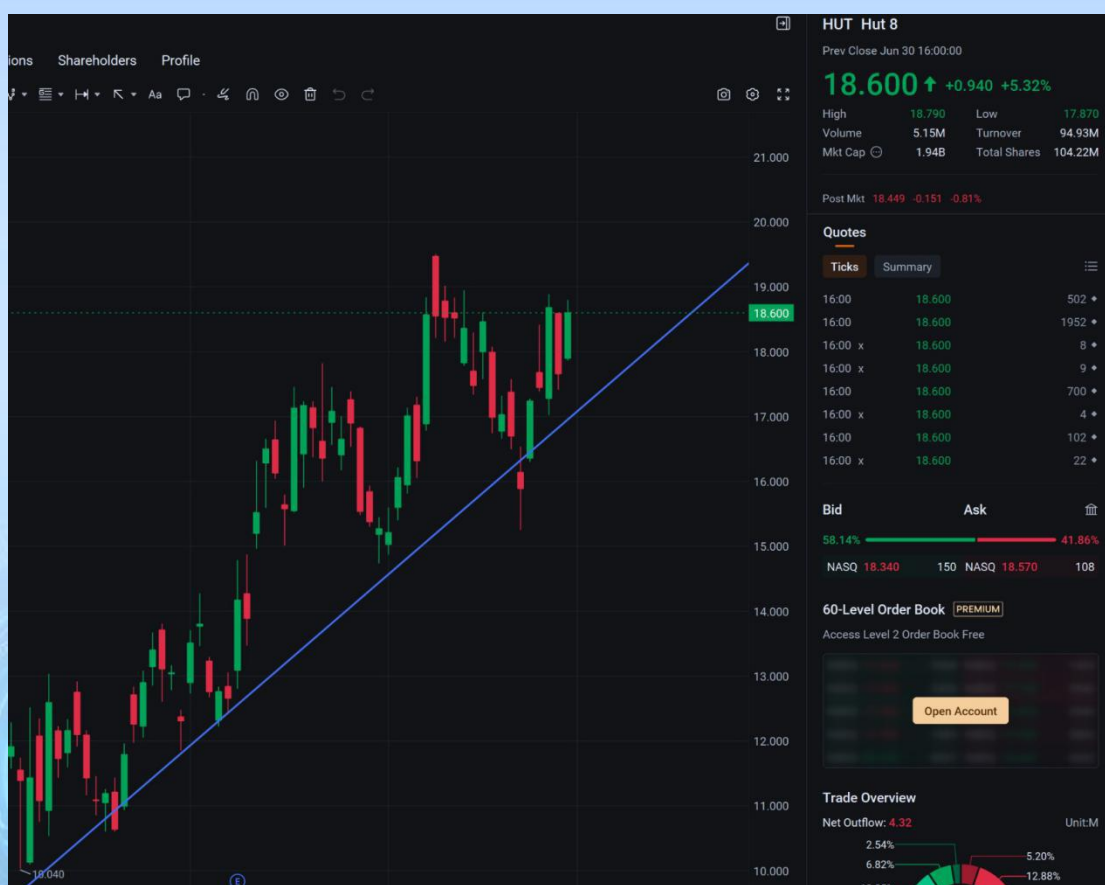

Treasury yields decline, the appeal of holding U.S. dollar assets weakens. That can trigger capital outflows from the U.S., reduce demand for the dollar, and push the Dollar Index lower. This reflects heightened expectations for a Federal Reserve rate cut. And right now, the ongoing decline in the Dollar Index signals that the market is increasingly pricing in those rate-cut expectations. So, what does that mean for the broader market? How might this shift impact equities and the crypto space?

For the stock market, the most immediate beneficiaries of a rate cut are high-growth tech companies — just like the AI application stocks I've been closely following and continue to believe in, including names we've already validated, like APP, UPST, and RDDT. As rate-cut expectations rise, corporate financing costs decrease, which naturally supports the growth and expansion of these companies. That, in turn, creates more room for profit growth and potential valuation upgrades — often translating into higher stock prices.

For the crypto market, the logic is similar but with even greater risk appetite. When rate-cut expectations strengthen, yields on U.S. Treasuries — seen as a safe haven — decline, prompting more capital to flow into higher-risk, higher-reward sectors like digital

Crypto has now secured its strategic positioning in the U.S., with Bitcoin reserves at the heart of that narrative. That's exactly why we've seen stocks like MSTR, IBIT, CLSK, and HUT rise — they're riding the momentum fueled by these shifting macro signals.

Today, I want to highlight the validation opportunity around HUT. HUT is a classic example of an energy infrastructure and Bitcoin mining company that has secured a strategic advantage in North America's power and digital computing sectors. Former President Trump has pledged to position the U.S. as the global capital for Bitcoin mining.

The development of the July tariff framework also brings a glimmer of hope: it could support small, U.S.-based mining equipment manufacturers, as domestically produced mining machines would be exempt from new import tariffs.

In parallel, the Trump administration has emphasized expanding energy infrastructure to help lower electricity costs for mining companies. A series of recent executive orders are expected to reduce U.S. energy prices, and notably, the tax cuts under the "Great America Act" are set to further enhance HUT's long-term competitiveness.

This means HUT isn't just a Bitcoin holder — in an environment where rate-cut expectations are rising, the company is well-positioned for a strong rally, making it a highly valuable case for us to track and validate.

HUT 250718 20.00C					
Prev Close Jun 30 15:48:44					
0.88 ↑ +0.34 +62.96%					
High	0.99	Low	0.66	Open	0.70
Volume	307	Turnover	24.69K	Open Interest	5.06K
Expiration	Jul 18, 2025	Days to Exp.	18D	Strike	20.00

Why do I also suggest using options as a way to validate this opportunity?

The reason is simple — options are a highly flexible, cost-efficient

way to participate in stock investing, with the potential for outsized returns.

At the core, options still track the stock itself — the logic remains focused on price appreciation.

By using options, you pay today's lower option premium to secure the right to benefit from HUT's potential upside before the option expires.

If the stock price rises, the value of the option increases — and typically, that price movement is amplified. In most cases, we're talking about profit ranges of 20% to 50%, sometimes more.

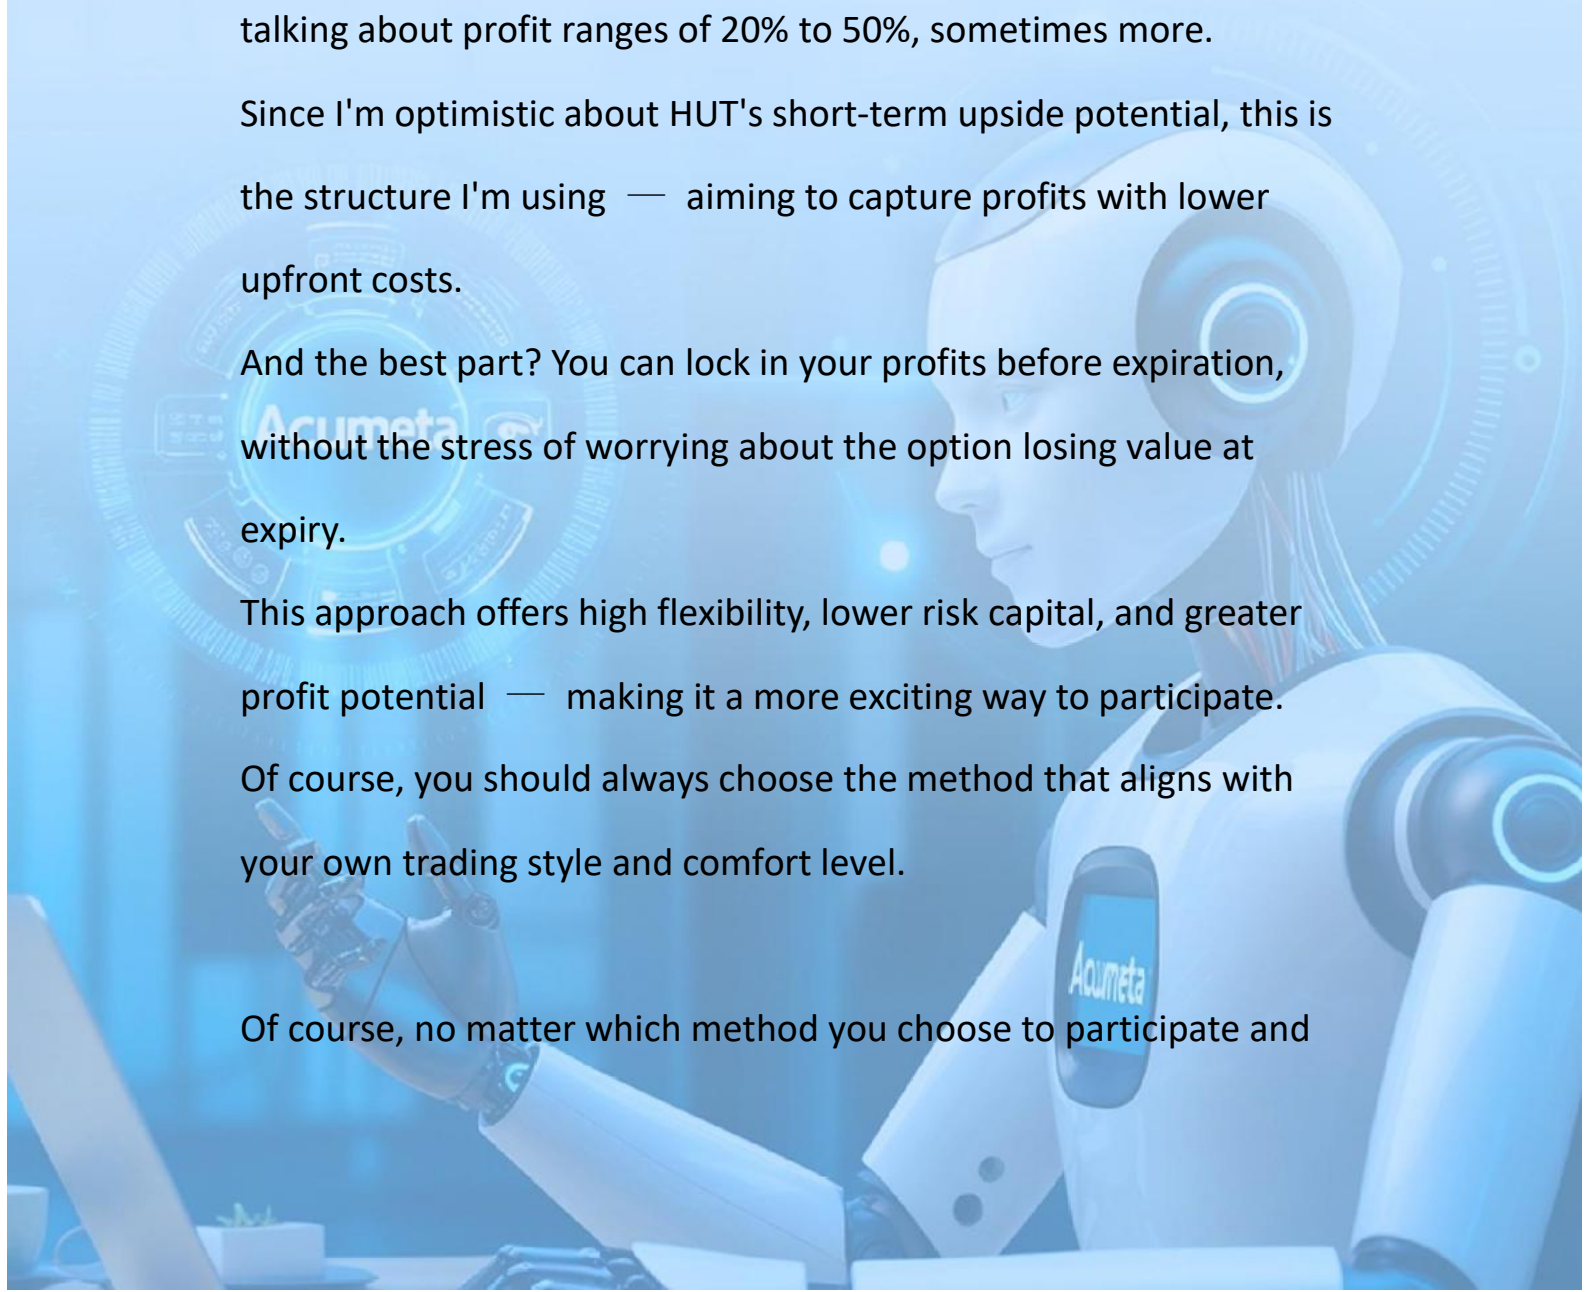

Since I'm optimistic about HUT's short-term upside potential, this is the structure I'm using — aiming to capture profits with lower upfront costs.

And the best part? You can lock in your profits before expiration, without the stress of worrying about the option losing value at expiry.

This approach offers high flexibility, lower risk capital, and greater profit potential — making it a more exciting way to participate.

Of course, you should always choose the method that aligns with your own trading style and comfort level.

Of course, no matter which method you choose to participate and

validate, you'll enjoy the protection of our compensation-backed guarantee!

As long as you follow our purchase quantities and participation guidelines, you're covered.

But let's be clear — protection is not the ultimate goal. Profit is.

That said, our priority is ensuring every member of this community trades with confidence, feels secure, and can follow our

quantitative strategies and market expectations without hesitation.

We're doing everything we can to create a safe, comfortable space for your investment journey. At the same time, we genuinely value your feedback and real-time interaction — it's essential to helping us optimize Acumeta's practical performance.

This is a true win-win collaboration, and we're excited to drive meaningful breakthroughs together through your validation process.

And one last thing — after you complete your trade, don't forget to send a screenshot to my for verification and record-keeping!

Huge thanks to Dr. Charles H. Sloan for sharing your insights and guidance! Wishing you all the luck in the world, every single day.

Being a winner once — that's luck. Winning occasionally — that's normal. But building lasting, consistent success? That takes

FinLogic

intention, effort, and discipline.

That's exactly why we're committed to going the extra mile — investing more time, more research, and relentlessly working to enhance real-world results.

Friends, when you receive an invitation to join our community group, don't hesitate — jump in right away. You'll unlock gifts and surprises beyond what you might expect, and more importantly, we look forward to building deep, long-term connections with you. We'll be paying attention to your progress and your feedback here, every step of the way. And as we approach America's Independence Day holiday, let's capture this window of opportunity — a little blessing from above — because, just like the Declaration of Independence reminds us: all people are created equal, with the right to freedom.

That's the core mission behind our quantitative strategies —
making investing safer, more accessible, and giving your wealth
room to move freely.

Wishing you a beautiful evening — I'll see you in the second half
of the year, see you in Q3, see you Tuesday!
