

Tuesday, Aug 19, 2025

To the Holders of Token FGT, the New Winners of On-Chain Wealth:

Folks, welcome to this investment gathering on the blockchain. If

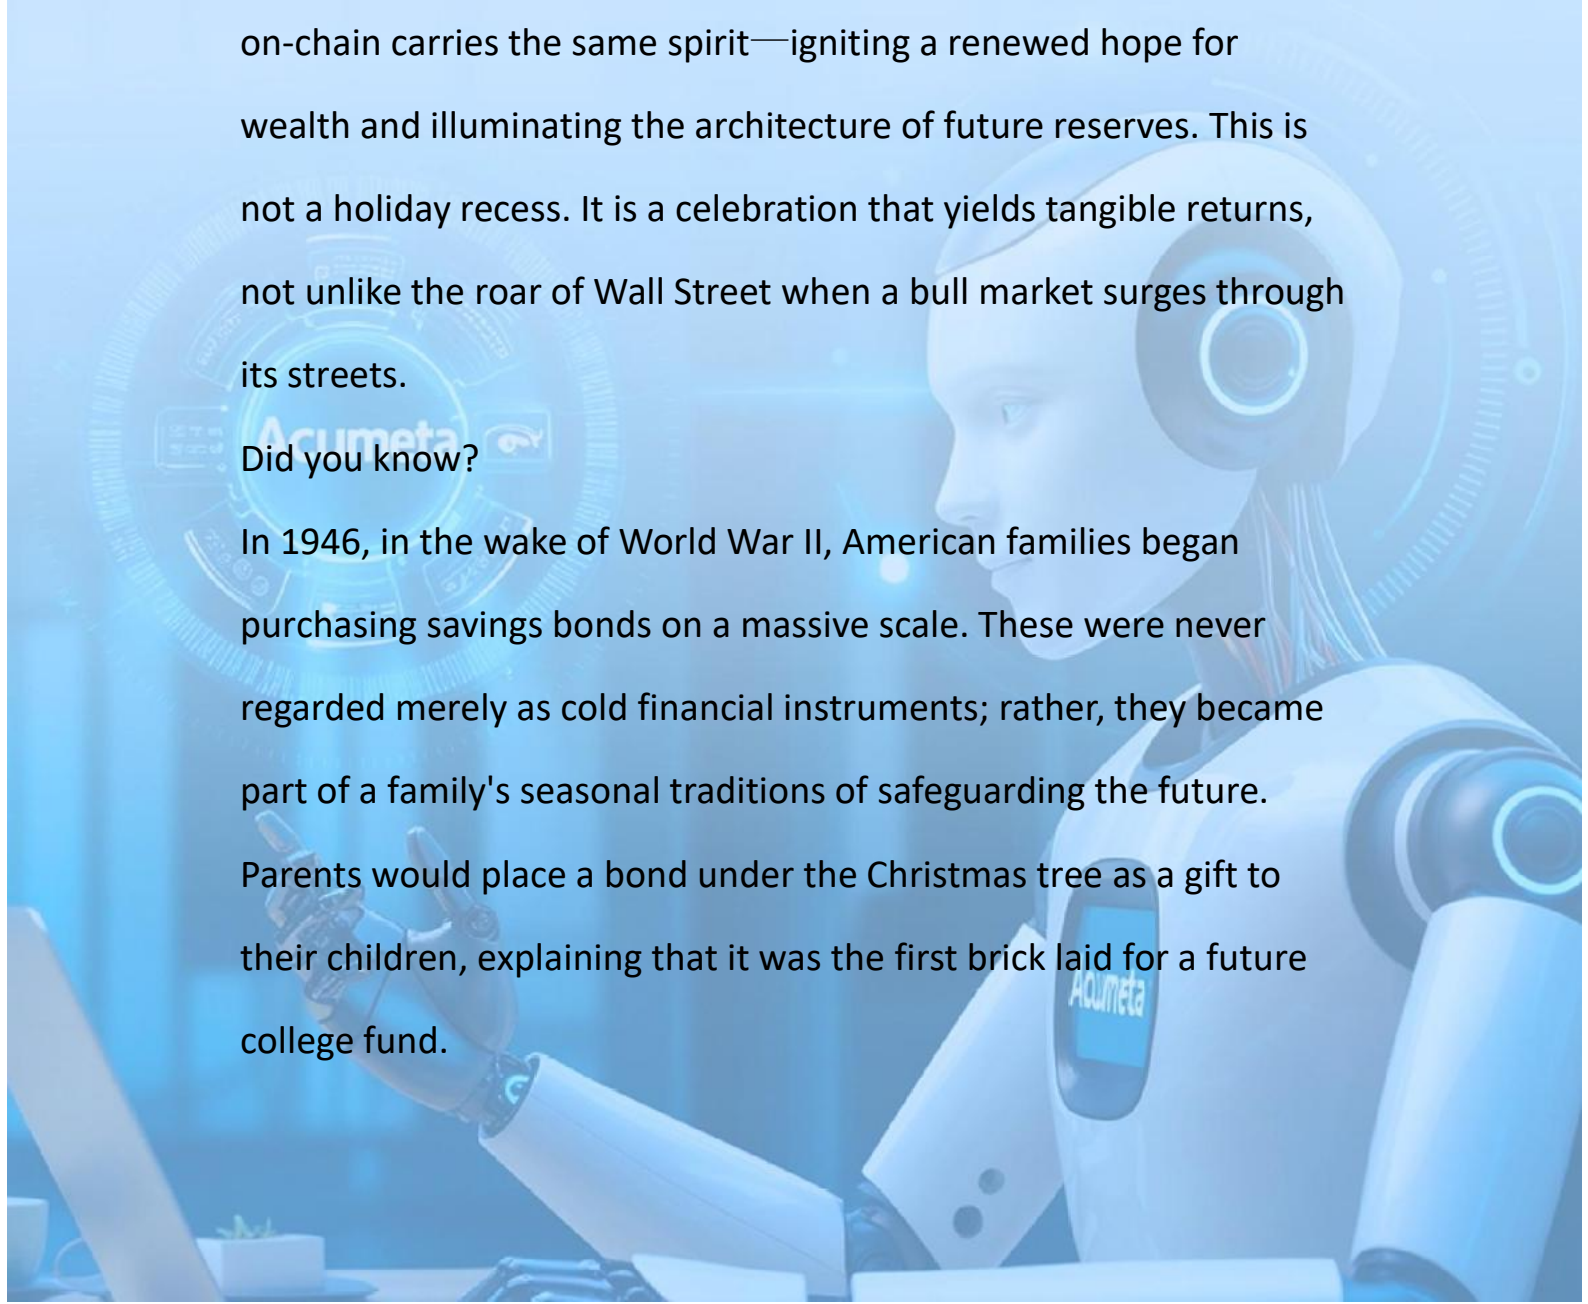

Tuesday's Token Redemption Carnival felt like a festival, let me be clear—it is far more than a holiday celebration.

Christmas and New Year fill us with anticipation, with the ritual of exchanging gifts and lighting candles. What we are witnessing today on-chain carries the same spirit—igniting a renewed hope for wealth and illuminating the architecture of future reserves. This is not a holiday recess. It is a celebration that yields tangible returns, not unlike the roar of Wall Street when a bull market surges through its streets.

Did you know?

In 1946, in the wake of World War II, American families began purchasing savings bonds on a massive scale. These were never regarded merely as cold financial instruments; rather, they became part of a family's seasonal traditions of safeguarding the future.

Parents would place a bond under the Christmas tree as a gift to their children, explaining that it was the first brick laid for a future college fund.

TOKEN

REDEMPTION GUIDE & INSTRUCTIONS

What we see today in the token redemption process is reminiscent of that moment. On the surface, it may appear as a transaction. Yet at its core, it is closer to a promise—an act of stewardship, a legacy reaching forward into the future.

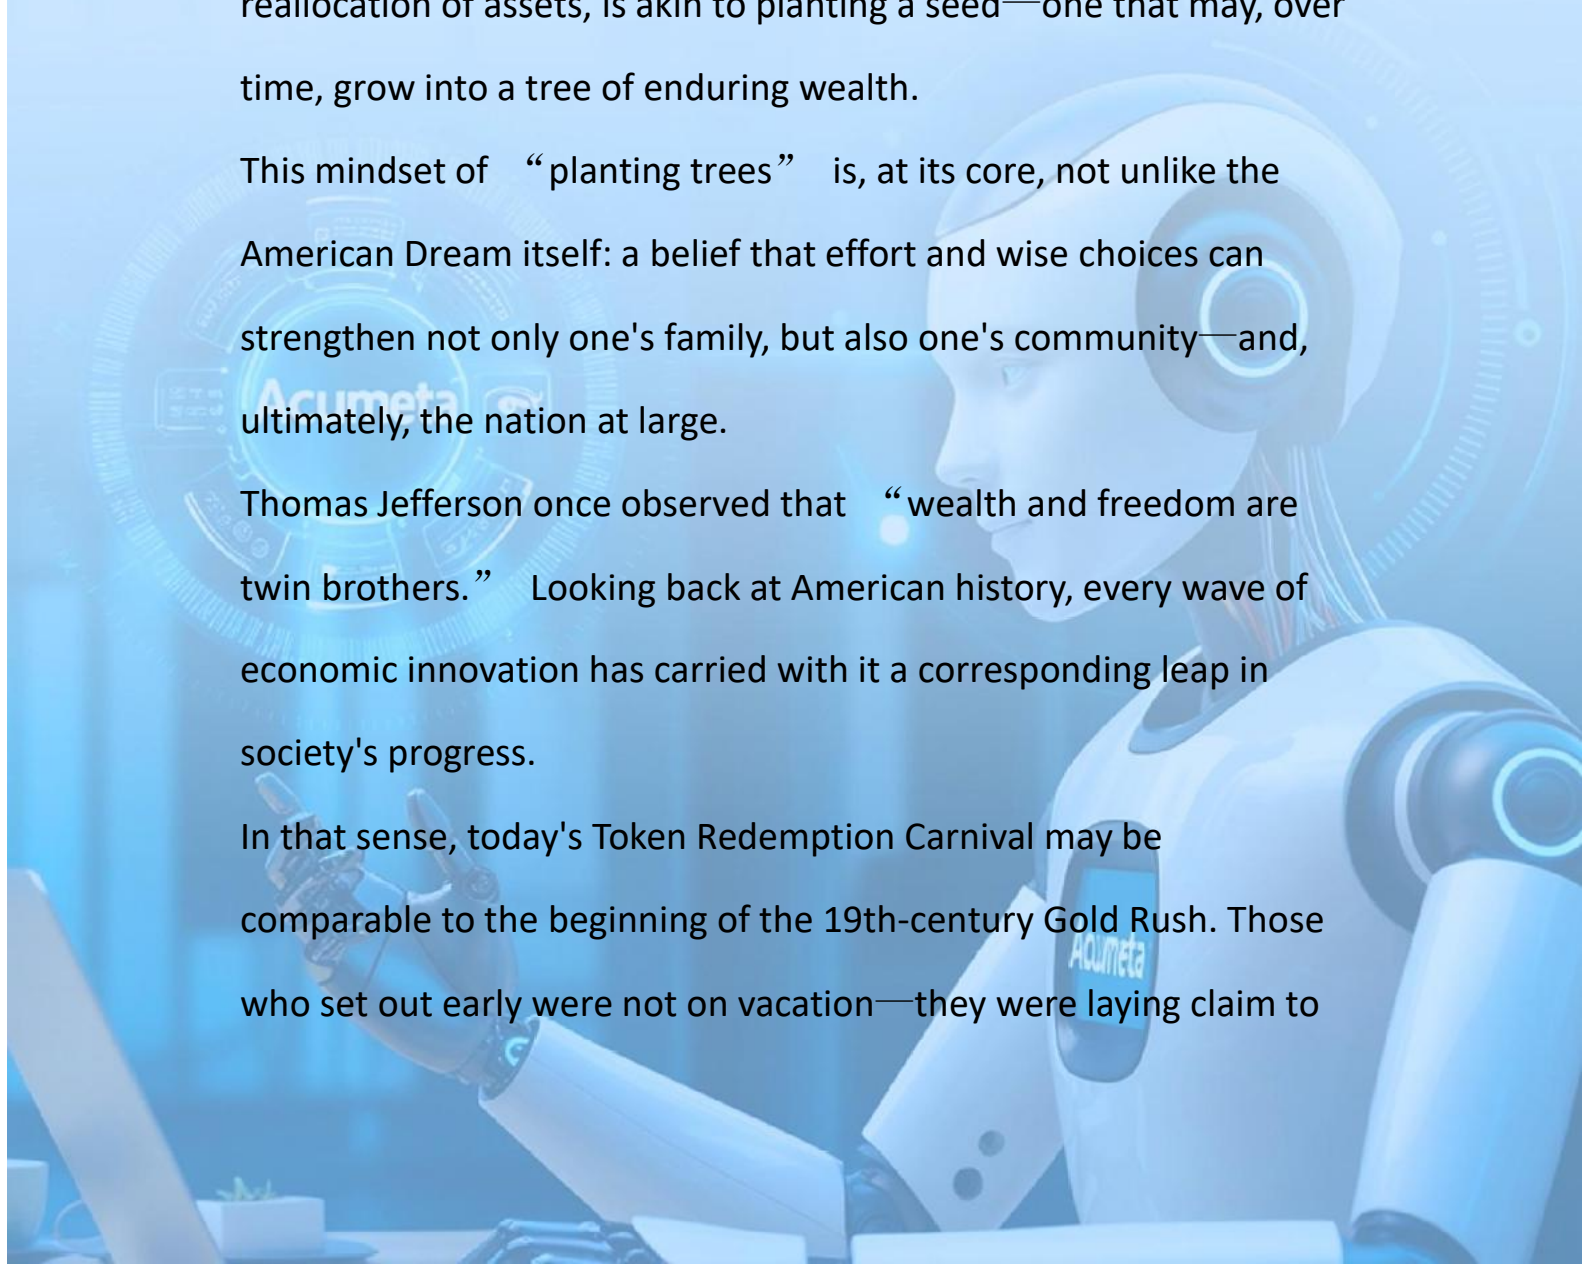

Do not work only for your paycheck—learn to let your capital work on your behalf.

The Token Redemption Carnival is, in many ways, a distilled reflection of that principle. Every on-chain transaction, every reallocation of assets, is akin to planting a seed—one that may, over time, grow into a tree of enduring wealth.

This mindset of “planting trees” is, at its core, not unlike the American Dream itself: a belief that effort and wise choices can strengthen not only one's family, but also one's community—and, ultimately, the nation at large.

Thomas Jefferson once observed that “wealth and freedom are twin brothers.” Looking back at American history, every wave of economic innovation has carried with it a corresponding leap in society's progress.

In that sense, today's Token Redemption Carnival may be comparable to the beginning of the 19th-century Gold Rush. Those who set out early were not on vacation—they were laying claim to

So, my dear friends, I extend this invitation once again: do not miss this moment.

Do not stand on the sidelines—step forward, participate, and take action to secure a lasting on-chain reserve for your future.

This is not merely a transaction; it is the passing on of a belief, the making of a promise to tomorrow. It is as if you were planting a seed beneath a great oak—every choice you make today will determine how tall and how strong that tree will one day grow.

If you still hold token vouchers, seize this Redemption Carnival and redeem them without delay. For with time, once the validity of those vouchers expires, the tokens themselves will be lost.

Guys, the key to the future already rests in your hands. Use it—unlock the door to the treasury that awaits you.

Of course, some of the newcomers who have only recently joined our community forum may still be wondering: What exactly is this token, and what value does it hold?

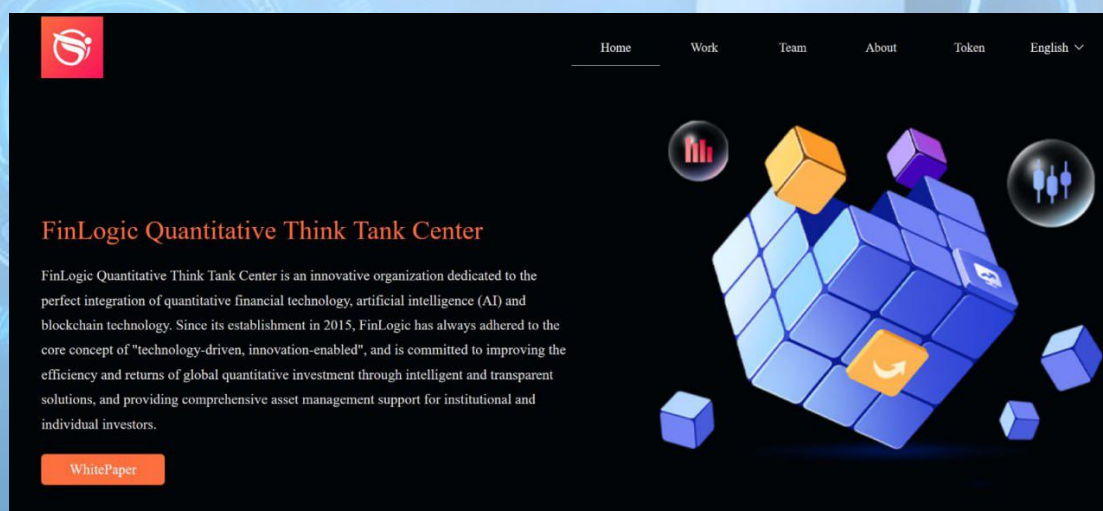

This connects directly to a significant financing initiative within my Quantitative Think Tank Center. To be clear, today is not about seeking funding from you. Years ago, we secured our first major

round of on-chain financing by leaning into the momentum of blockchain's early narrative. That initial raise became the foundation for the creation and incubation of Acumeta. Even now, Acumeta continues to evolve and refine its mission.

Over these past years—years I regard as deeply rewarding—we have tested its potential together. Through its insights, we have engaged in equity trading, alerts, analysis, portfolio optimization, and the sharing of a range of strategic approaches.

Now, if you do not yet hold token vouchers, you still have the opportunity to earn additional rewards through the ongoing Carnival activities. I would encourage new participants to reach out directly to my teaching assistants, who will gladly assist you in securing access.

When you redeem and receive Token FGT, you will need to open an account with the ETHERMAC Cryptocurrency Exchange. Why is this necessary?

Because the token issued by my Quantitative Think Tank Center is listed there. Several years ago, it went through the formal requirements for an STO-based listing of a new asset, and it has been traded on that platform ever since.

Admittedly, this is not Nasdaq. Yet, years ago, it did receive the necessary regulatory approvals for token issuance, and the market itself has continued to acknowledge its underlying value.

This is why today you can still turn to the white paper to understand its significance. From the perspective of token economics, it is straightforward to see the circulation ratios within the market, as well as the related long-term reporting from institutional holders.

And what does this tell us?

A token's white paper functions much like the prospectus of an IPO: it explains why capital was raised, how it is intended to be deployed, and what value underpins that process.

What does the tokenomics disclosure within the Token FGT white

paper actually reveal?

Much like the prospectus of a newly listed stock, it defines which portion is in circulation and which is reserved for long-term holding plans. From the core team to technology development, from market liquidity to community airdrops, it lays out the distribution and movement of the token.

This is comparable to the transparency found in equity markets—public information that identifies major shareholders, key participants, and the proportion of freely tradable shares. Such clarity provides the market with essential investment guidance.

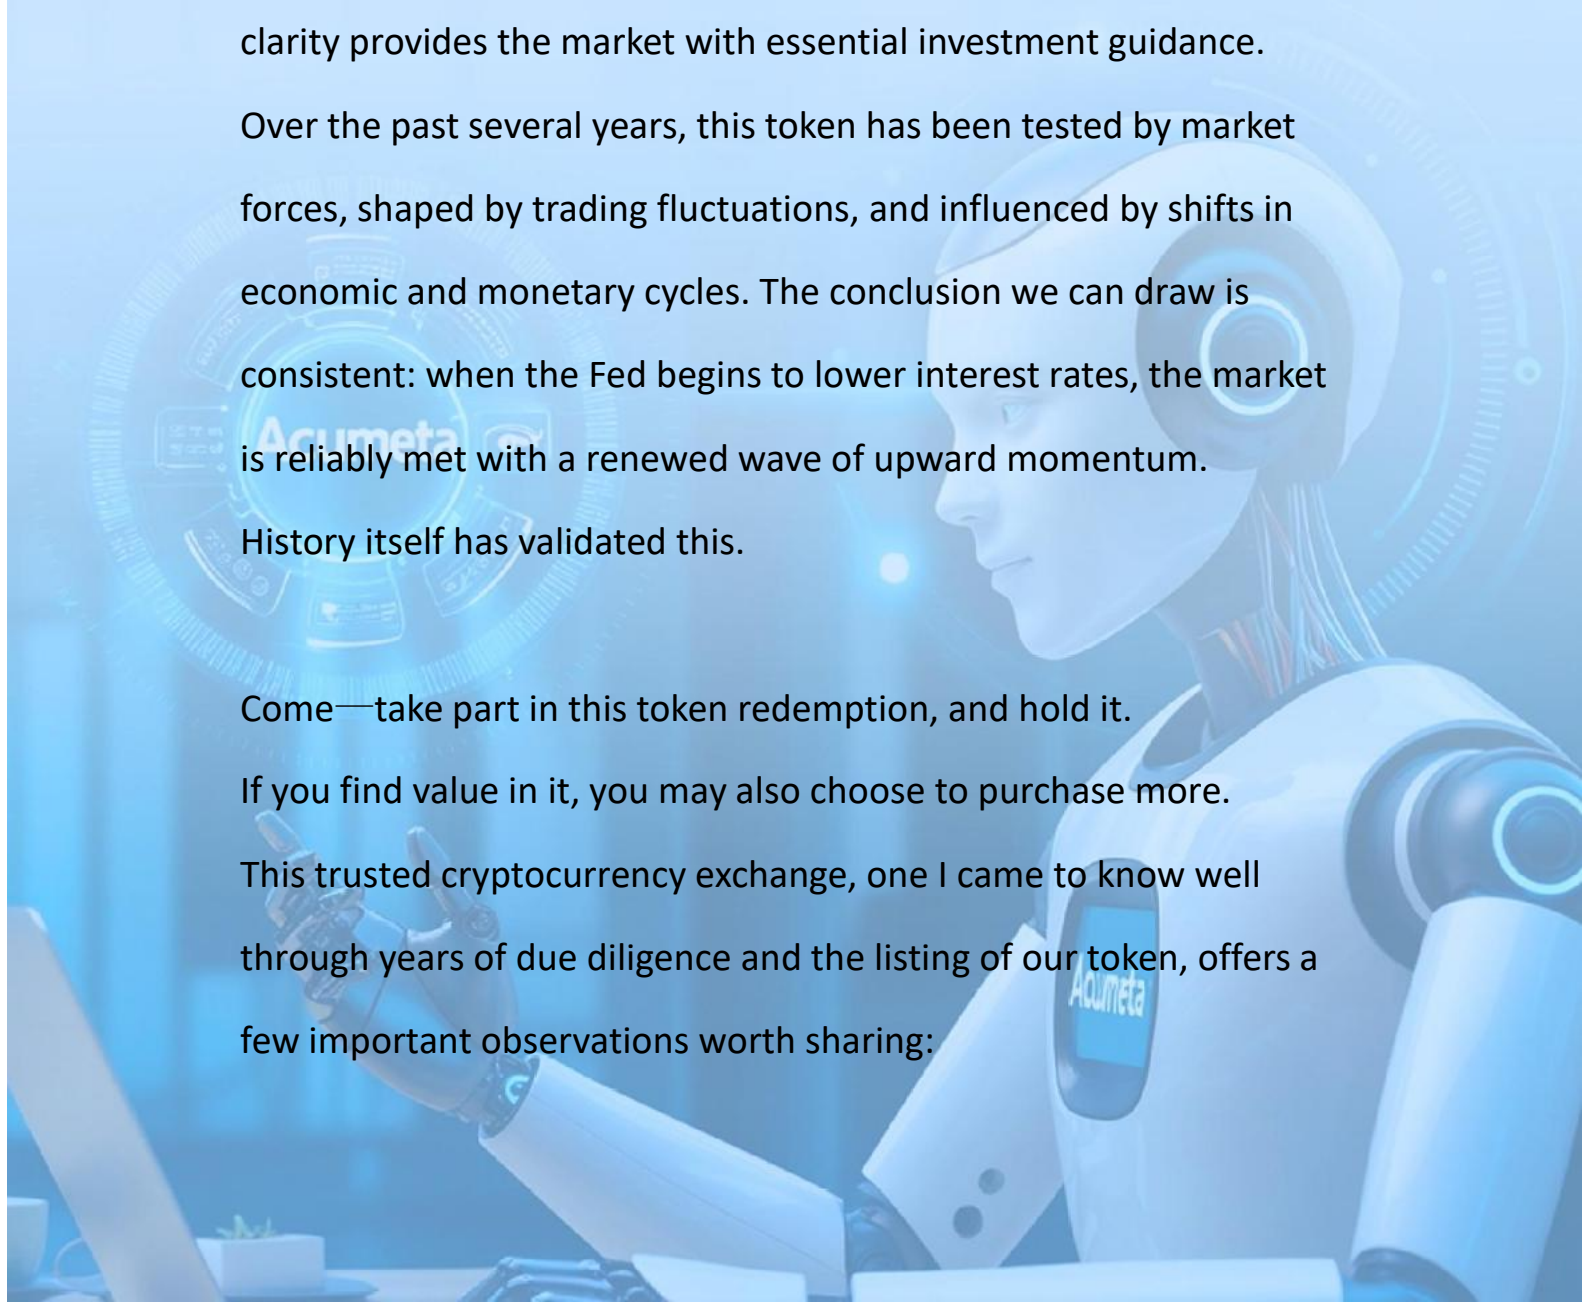

Over the past several years, this token has been tested by market forces, shaped by trading fluctuations, and influenced by shifts in economic and monetary cycles. The conclusion we can draw is consistent: when the Fed begins to lower interest rates, the market is reliably met with a renewed wave of upward momentum.

History itself has validated this.

Come—take part in this token redemption, and hold it.

If you find value in it, you may also choose to purchase more.

This trusted cryptocurrency exchange, one I came to know well through years of due diligence and the listing of our token, offers a few important observations worth sharing:

DECENTRALIZED SECURITY

THE BLOCKCHAIN TRUST MECHANISM

1. Reviewing the tokenomics of Token FGT, one finds that more than 45% of the STO and airdrop allocations are listed and actively traded here. These segments alone represent a market capitalization exceeding 200 million USDC. My own commitments—measured in the hundreds of millions—and the lived experience of deploying capital here attest to the reliability of this exchange.

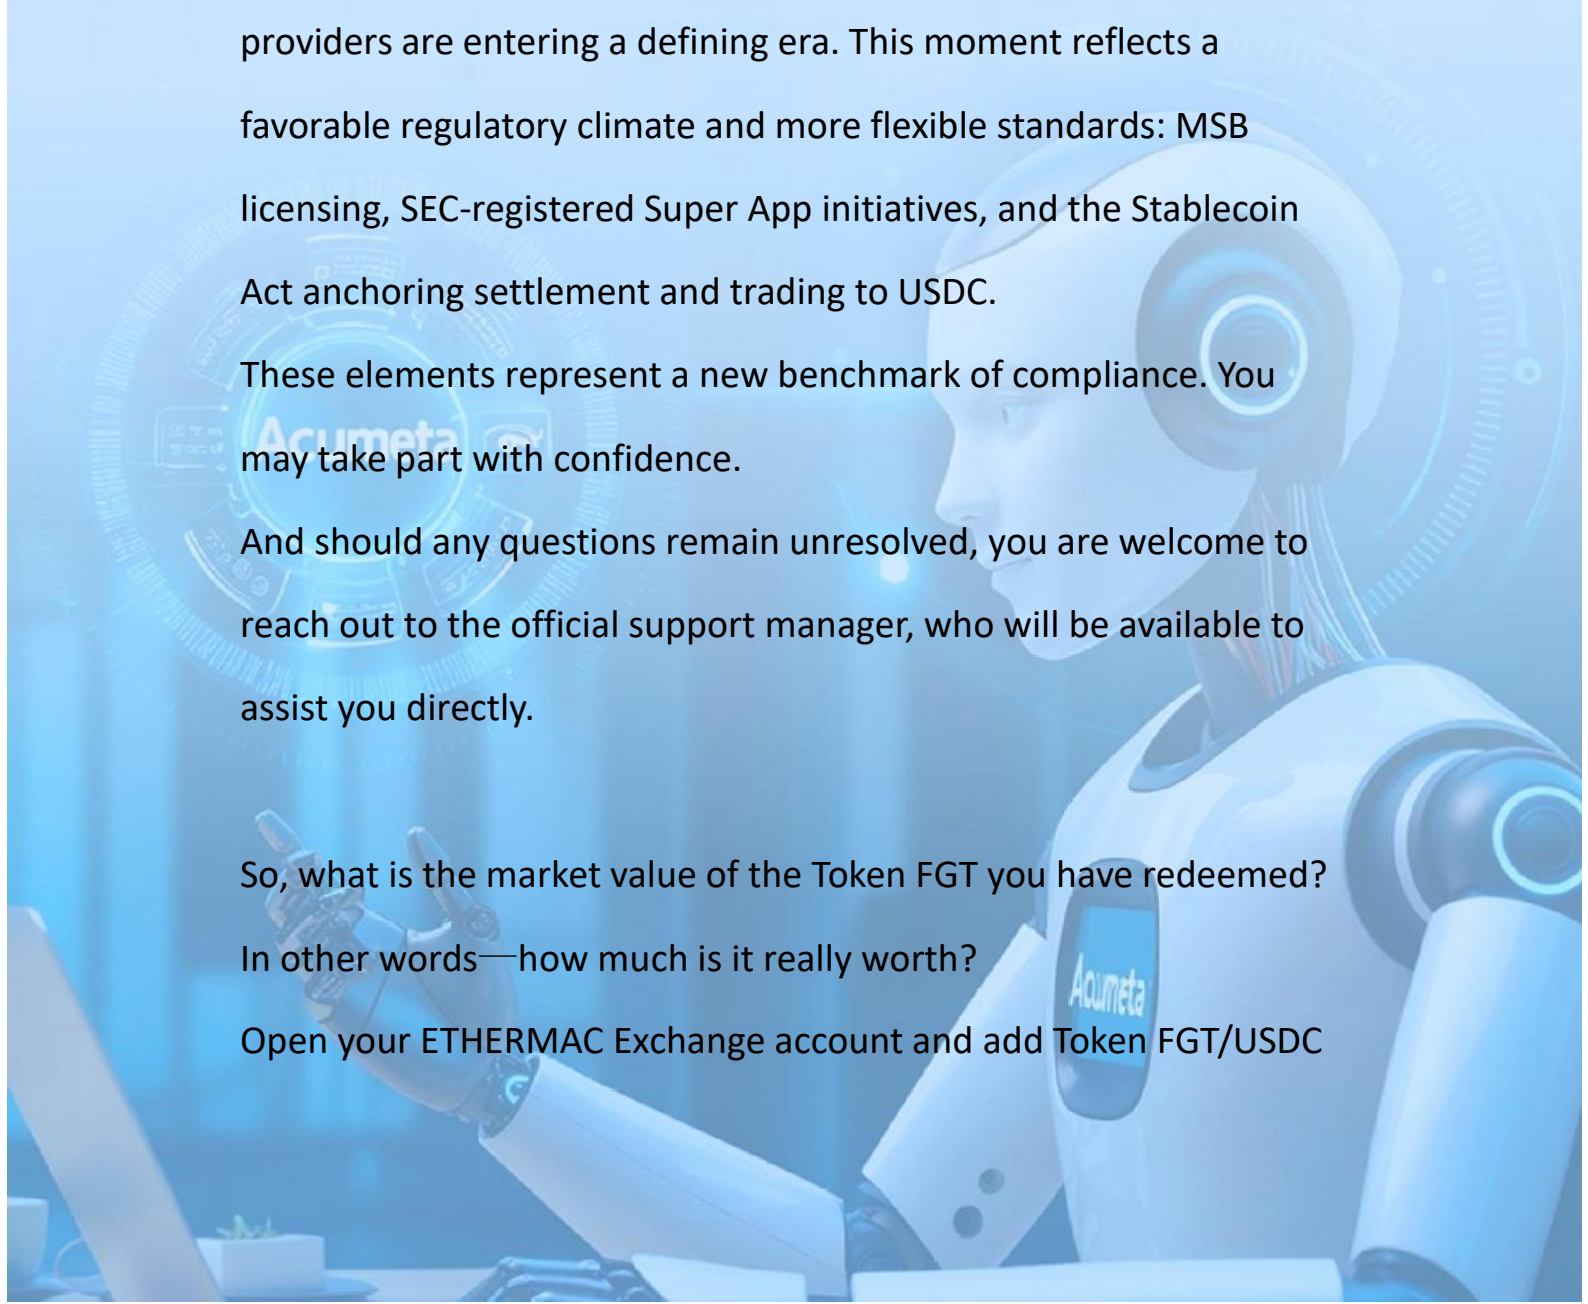

2. As part of America's emerging “Crypto Capital,” we recognize the central importance of compliance. Just last week, the successful public listing of BLSH underscored that U.S. digital asset service providers are entering a defining era. This moment reflects a favorable regulatory climate and more flexible standards: MSB licensing, SEC-registered Super App initiatives, and the Stablecoin Act anchoring settlement and trading to USDC.

These elements represent a new benchmark of compliance. You may take part with confidence.

And should any questions remain unresolved, you are welcome to reach out to the official support manager, who will be available to assist you directly.

So, what is the market value of the Token FGT you have redeemed?
In other words—how much is it really worth?

Open your ETHERMAC Exchange account and add Token FGT/USDC

to your watchlist. Well, from that moment onward, you can track its price fluctuations in real time.

As of now, its price is hovering around 1.1 USDC. Since first observing its movement last Wednesday, the token has shown remarkable gains—driven in part by the market's anticipation of a September rate cut by the Federal Reserve. It also reflects the strong demand and rapid uptake during the current wave of new crypto asset listings.

So—how many tokens did you redeem on Monday? How many vouchers did you exchange on Tuesday?

Your token holdings \times token price = market value of your tokens, representing the real on-chain wealth you now possess.

Now that Token FGT has a market value, what can it do for you?

Given that new users are currently subject to MSB-imposed holding restrictions, what opportunities remain at your disposal?

Of course, there are options. Suppose you hold 1,000 Token FGT, currently priced at 1.1 USDC—your market value would equal 1,100 USDC. At this stage, direct sale or withdrawal is not permitted.

But you can stake. Just as a shareholder might pledge their publicly traded shares, you can stake your tokens.

STAKING FUNDS

EXCLUSIVE USAGE INSTRUCTIONS

How does staking work? The process is straightforward: contact your official support manager and request a staking allocation. Once

approved, your account will receive the corresponding staked funds.

According to official guidelines, a 1,000 USDC stake yields an 800 USDC allocation.

Do you see how staking can secure 800 USDC for you? Don't wait—reach out to your official account manager today.

Why is it so straightforward to obtain funds through staking?

1. The ETHERMAC Cryptocurrency Exchange introduced this mechanism to celebrate our Token Redemption Carnival and to enhance the trading experience in the market, while simultaneously elevating the exchange's visibility and service standards.
2. It reflects the token's active trading on the exchange and its years of stable performance, earning recognition from the market and institutional support. With that credibility comes privilege: whoever holds the tokens in their exchange account gains the right to access this staking-based financing.
3. The staked allocation of 800 USDC is interest-free and specifically intended for investment in the new AIG token STO project. Once the new token is listed, these funds must be repaid in accordance with the official terms.
4. Naturally, any profits you generate from the AIG token STO

project belong entirely to you and may be freely withdrawn or used in circulation.

This, in essence, is the real purpose of the 800 USDC staking allocation. The exchange aims to leverage this initiative to enhance services for new token STO issuances and attract more high-quality participants. Do you understand?

So why is the upcoming subscription for the new AIG token STO attracting such close attention from the exchange and generating such intense market focus?

Much like our experience with FIG/BLSH, both the market and the securities exchanges pay particular attention to companies that demonstrate promising market applications and strong capital momentum.

In the cryptocurrency space, the STO listing of the new AIG token similarly draws intense focus from both the exchange and market participants.

Here is an important distinction:

IPO is when a company sells its stock to the public for the first time, allowing investors to purchase shares on a securities exchange—such as the NYSE or Nasdaq. What you acquire is an ownership stake in the company itself, traded within traditional capital

SUBSCRIPTION AND PURCHASE INSTRUCTIONS FOR THE NEW AIG TOKEN

AIG

STO, by contrast, issues security tokens on the blockchain, typically traded on a compliant platform like the ETHERMAC Cryptocurrency Exchange. What you acquire is digitally recorded equity or debt on-chain.

Both methods are fundamentally avenues for raising capital: a company or project requires funds, so it offers shares or rights to investors in exchange.

If we want to understand whether the new AIG token project is a token STO worth our attention and exploration, we should start with its white paper.

A review of the white paper's core reveals that the project combines AI with genomic algorithmic therapy, aiming to deliver “personalized, precision medical services.”

We can think of this concept as a “future of bespoke healthcare.”

Traditional medical care works like this: you fall ill, and the doctor prescribes a treatment that is generally applicable. It's akin to buying a piece of clothing in only S, M, or L sizes—you pick the one that comes closest to fitting your body.

This project, however, first uses AI and genomic algorithms to map your unique genetic blueprint. AI acts like a master tailor, analyzing your individual “measurements” (your genes) to craft the

perfectly fitted garment—that is, a tailored treatment plan.

This customized, precision therapy—personalized medicine—is far more effective, accurate, and safe than traditional, “mass-produced” approaches to healthcare.

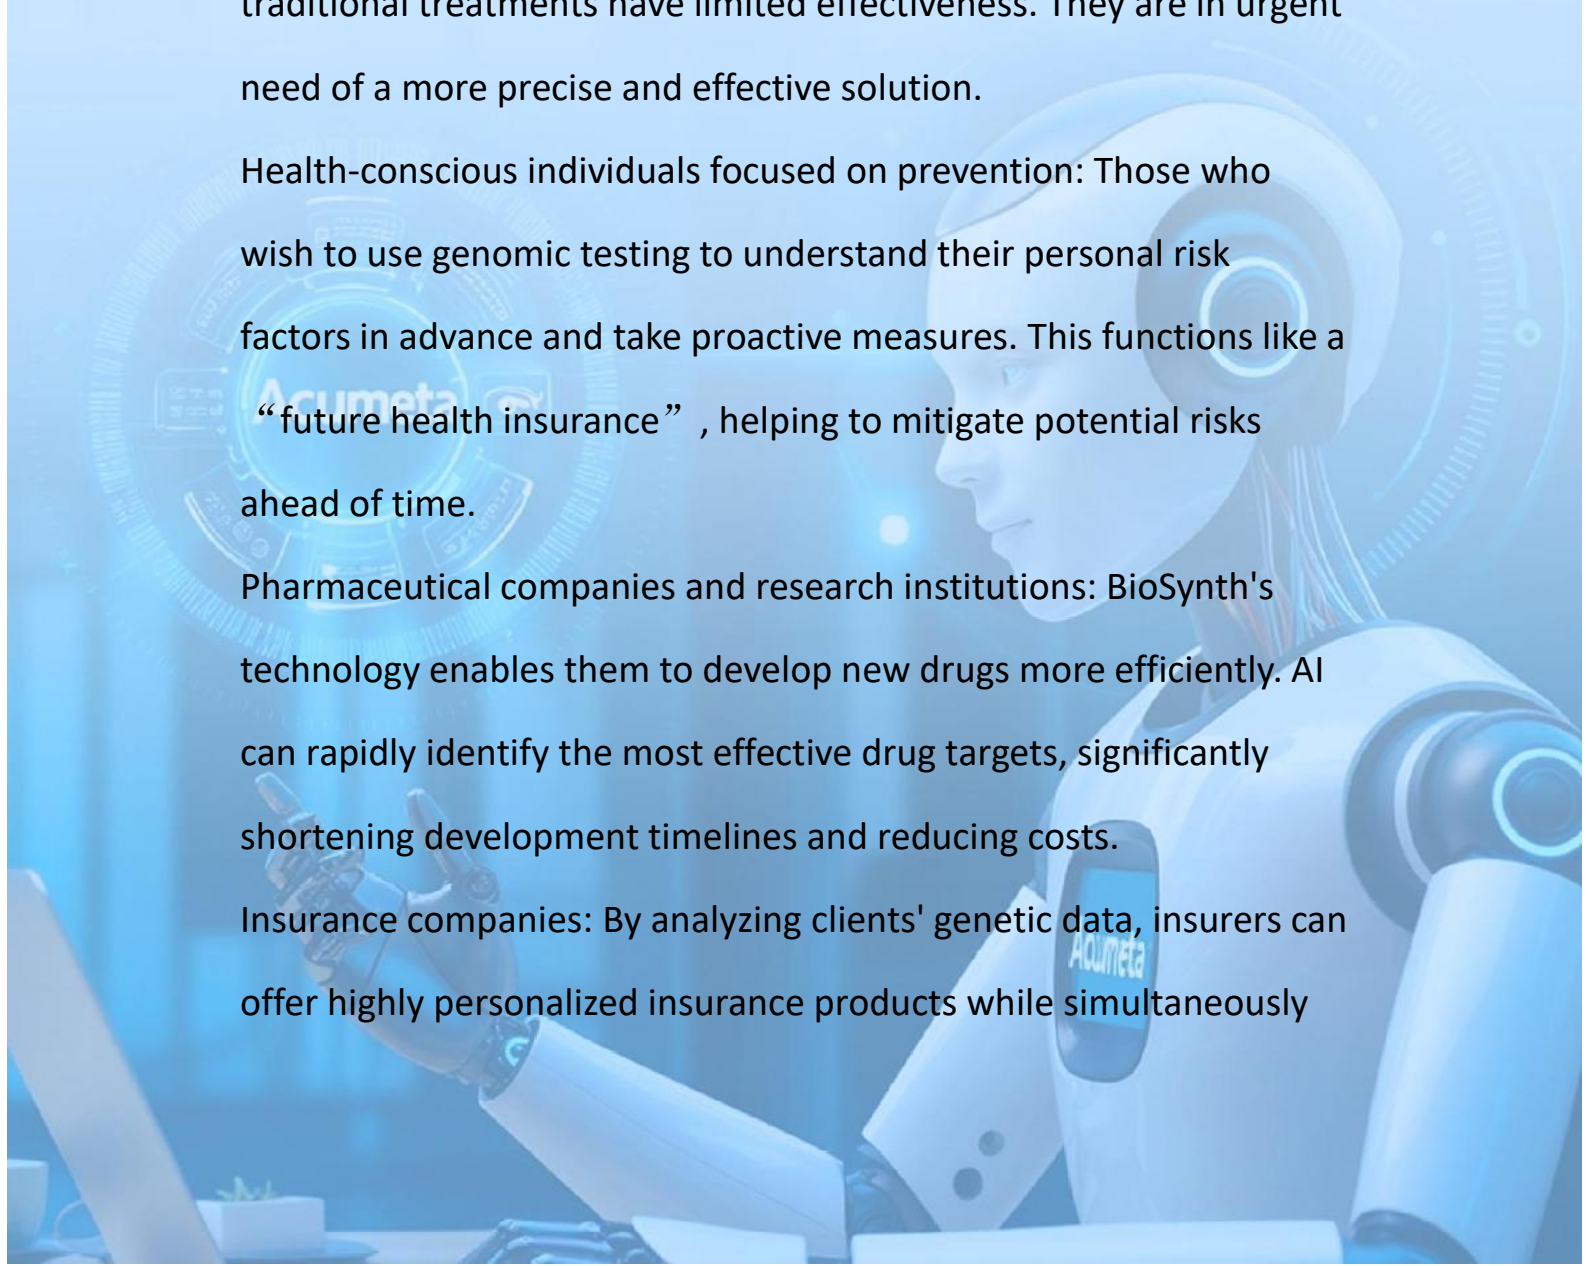

The customer base for the new AIG token project can be categorized as follows:

Patients with complex or rare conditions: Particularly those suffering from cancer, rare diseases, or chronic illnesses, for whom traditional treatments have limited effectiveness. They are in urgent need of a more precise and effective solution.

Health-conscious individuals focused on prevention: Those who wish to use genomic testing to understand their personal risk factors in advance and take proactive measures. This functions like a “future health insurance” , helping to mitigate potential risks ahead of time.

Pharmaceutical companies and research institutions: BioSynth's technology enables them to develop new drugs more efficiently. AI can rapidly identify the most effective drug targets, significantly shortening development timelines and reducing costs.

Insurance companies: By analyzing clients' genetic data, insurers can offer highly personalized insurance products while simultaneously

FinLogic

reducing claims risk.

The technology behind the new AIG token project holds tremendous market potential and promises to disrupt traditional medical paradigms:

Early detection of genetic risk: We can identify potential hereditary diseases in advance and intervene before the condition manifests, including through gene-editing therapies, addressing problems at their root. Over the long term, this approach could significantly reduce overall healthcare expenditures.

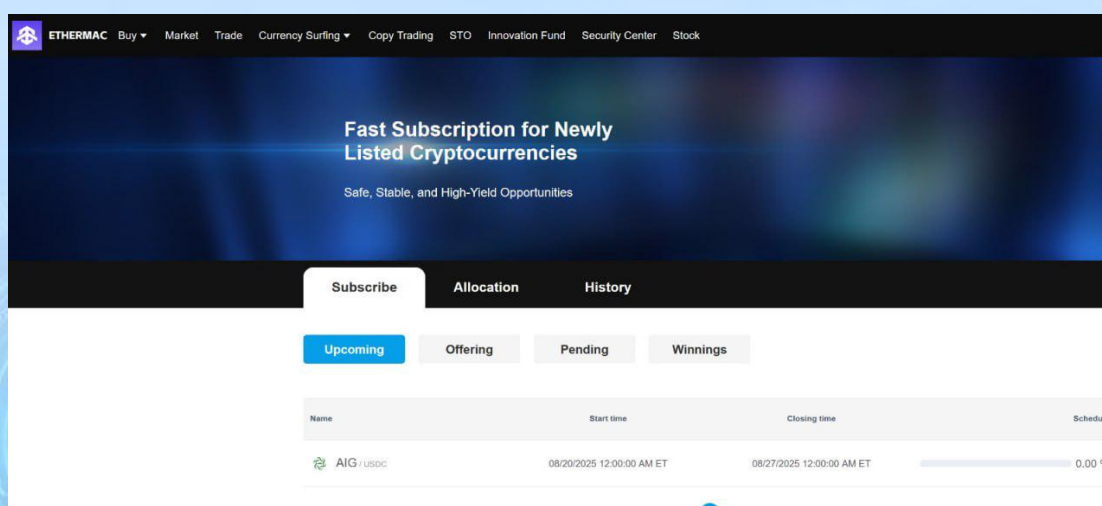

Minimizing ineffective treatments: Traditional “trial-and-error” therapies often squander both money and time. Personalized treatment allows for a direct, targeted approach, avoiding unnecessary drugs or surgeries.

Reducing complication risks: More precise therapies mean fewer

side effects, which in turn lowers the additional medical costs arising from drug reactions or complications.

From treatment to prevention: Genetic algorithms empower individuals to take proactive measures before illness occurs, a far more cost-effective strategy than waiting until after the disease manifests.

Notably, with the passage of Trump's Big Beautiful Act this year, healthcare spending has been reduced—a development that stands as a clear advantage for the vast majority of Americans.

The reduction in healthcare spending under the Big Beautiful Act hasn't shrunk the market—on the contrary, it has shifted the medical landscape from “reactive treatment” to “proactive wellness.” This means that American consumers, businesses, and capital are all seeking new health technologies and services to fill the emerging demand.

In other words, healthcare spending is becoming smarter, more

efficient, and in doing so, it's creating an expansive new market opportunity.

It is against this very backdrop that the AIG token project has emerged—what I can confidently call a true blessing.

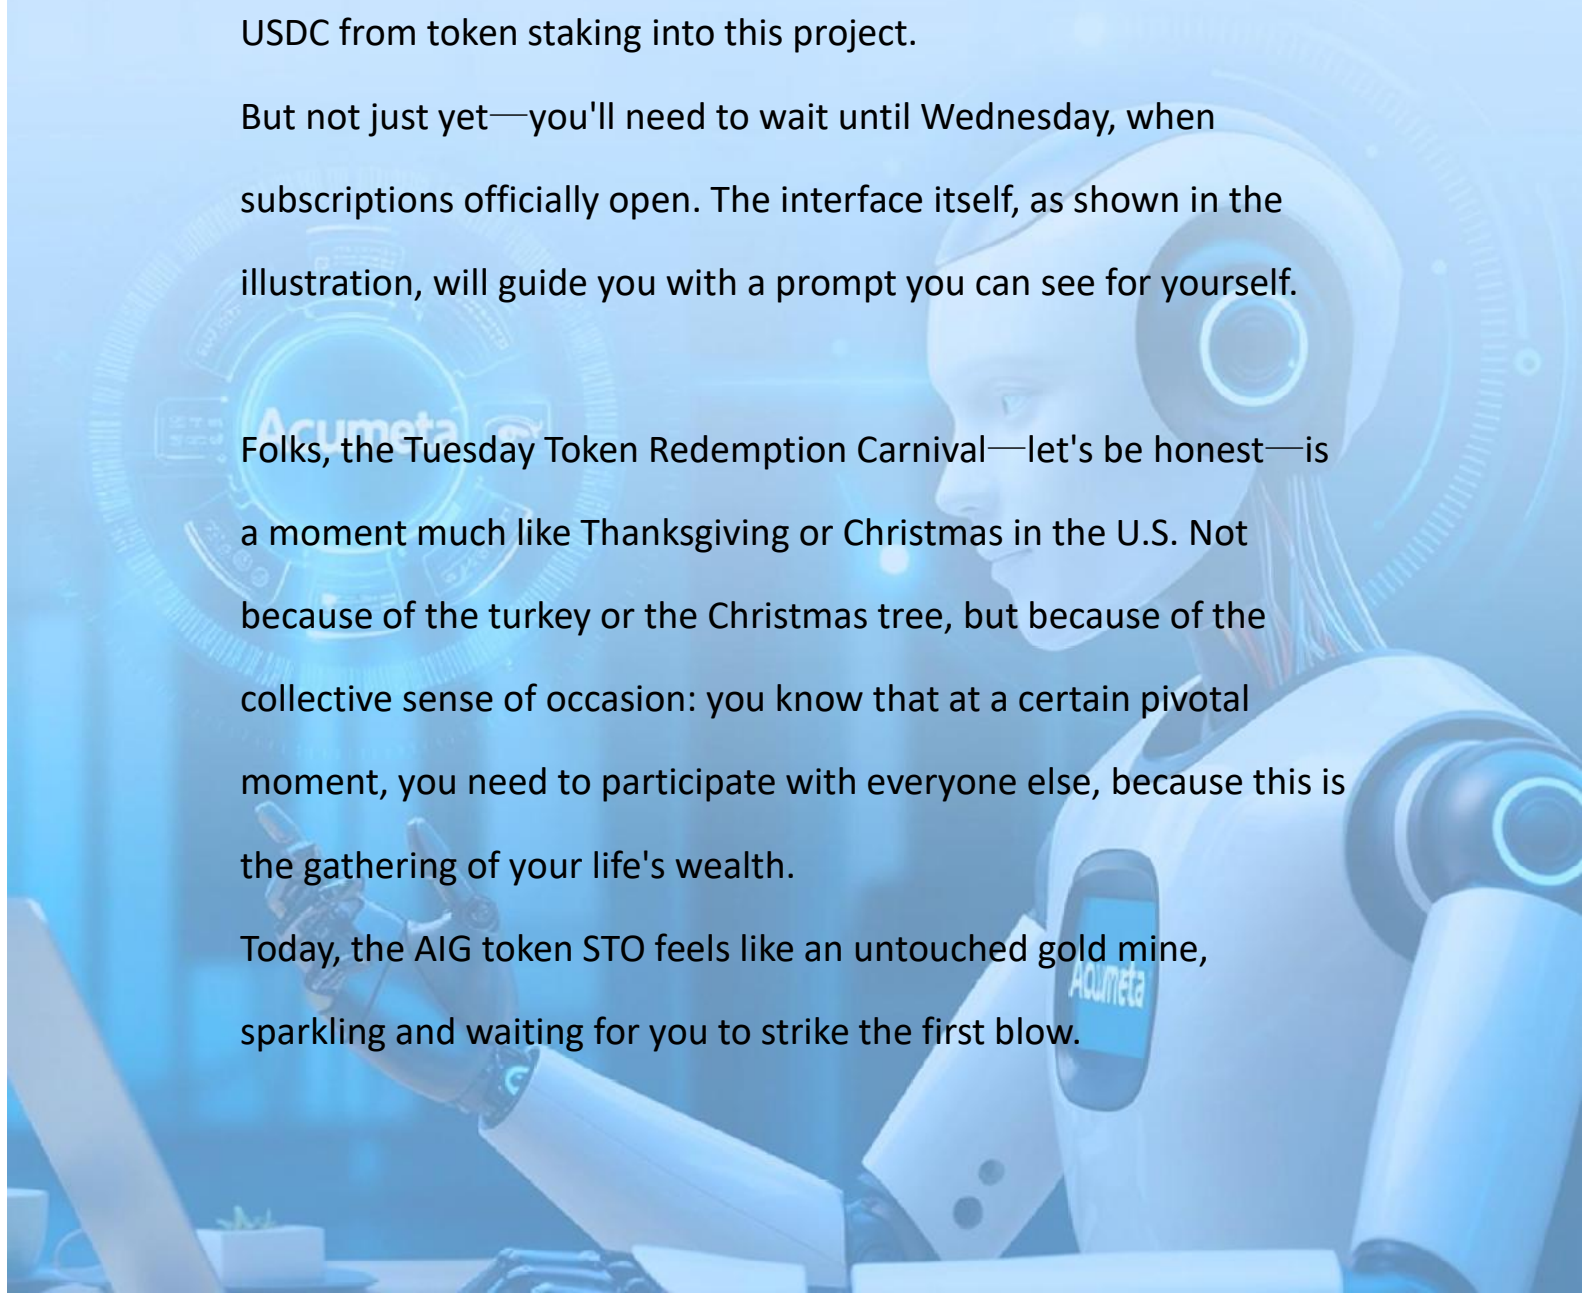

Through careful analysis and deep understanding, I am eager for you to experience the project's future value potential firsthand.

Today is Tuesday. From a “zero-risk” perspective on a new token, and drawing upon our experience with FIG/BLSH IPOs, seize this rare opportunity: from an experiential standpoint, allocate your 800 USDC from token staking into this project.

But not just yet—you'll need to wait until Wednesday, when subscriptions officially open. The interface itself, as shown in the illustration, will guide you with a prompt you can see for yourself.

Folks, the Tuesday Token Redemption Carnival—let's be honest—is a moment much like Thanksgiving or Christmas in the U.S. Not because of the turkey or the Christmas tree, but because of the collective sense of occasion: you know that at a certain pivotal moment, you need to participate with everyone else, because this is the gathering of your life's wealth.

Today, the AIG token STO feels like an untouched gold mine, sparkling and waiting for you to strike the first blow.

Even more intriguing, our token staking functions like insurance.

Step back for a moment: even if things go sideways, you won't hit rock bottom. Why? Because the tokens you hold were earned through the event, and the staked funds provide you with liquidity support. You haven't spent a dime. The risk you bear? Practically zero.

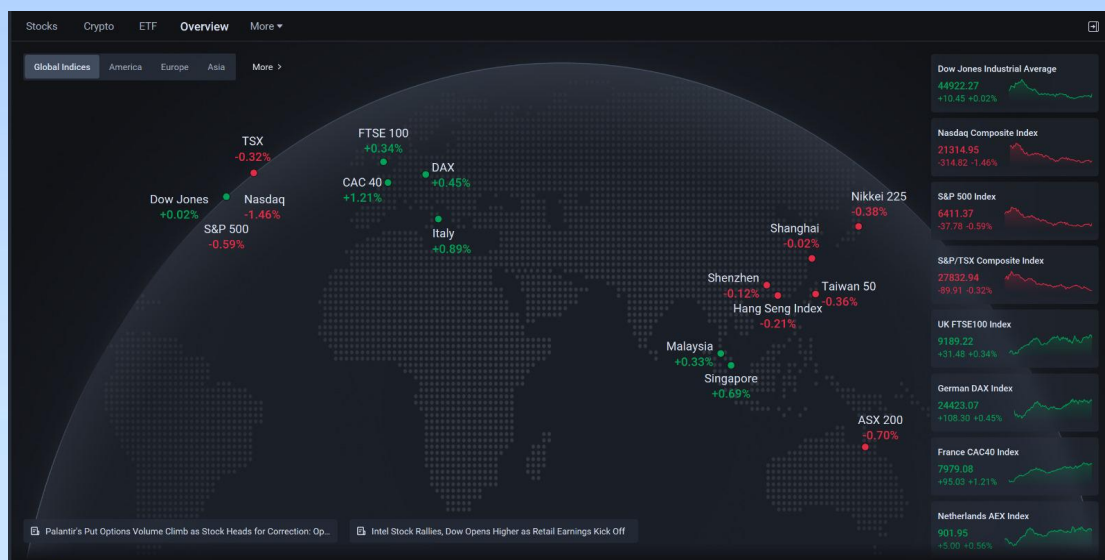

Peter Lynch once said, “The key to investing is finding a way to sleep at night.” Today, you stake your tokens, and tomorrow, you could hold an additional 800 USDC in your hands. This isn't a daydream—it's a “cash-flow miracle” of the blockchain era. And if the AIG token succeeds—if it surges like BLSH/FIG—you'll receive allocated shares, and every bit of profit will belong entirely to you.

A simple question: will you actively participate in this opportunity? You are already on the path toward future wealth, and this is a testament to your investment conviction. Tell me your answer this afternoon. Until then!

Ladies and gentlemen, welcome to today's investment forum.

As anticipated, Tuesday's U.S. equity markets experienced notable turbulence, driven by the Fed's series of meetings and the remarks of its officials.

This downturn resembles a storm at sea—not an indication that the vessel is sinking, but rather a reminder of the importance of recalibrating one's course in advance.

At the same time, BTC and ETH were drawn into a parallel decline.

One might ask: is this a signal of danger, or the outline of an opportunity as rare as gold?

History offers no shortage of such moments. “Markets extend their gifts precisely when fear prevails.” Today's pullback in BTC and ETH may well be less a setback than the wrapping paper around that gift. To the discerning eye, the present resembles nothing so much as a day of quiet discounts.

But opportunity alone is never sufficient. Risk always walks hand in hand with reward—that is the enduring principle of investment.

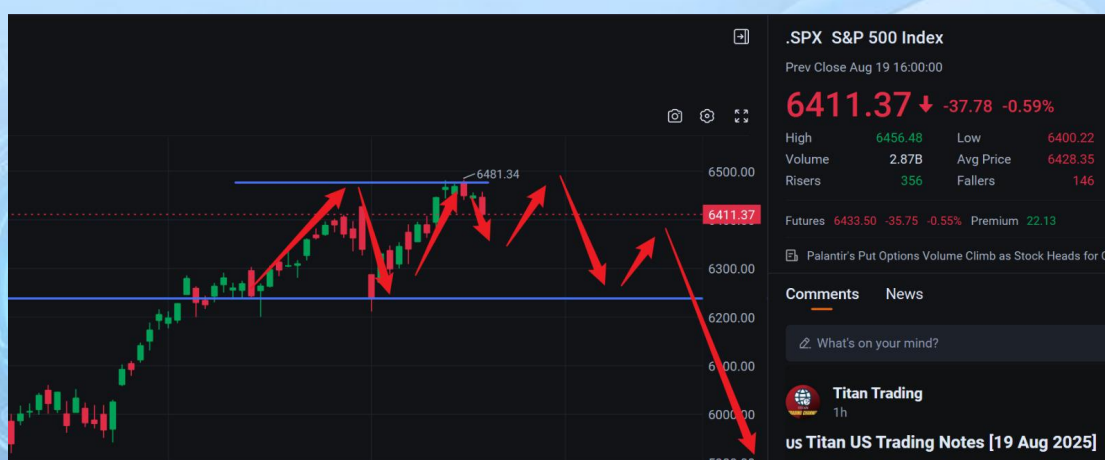

This brings us directly to today's theme: how, in an age of

uncertainty, one might still uncover stability and the quiet elegance of a well-structured portfolio.

That is precisely why, throughout the redemption carnival, we have continued to share perspectives on the frontier of investment thinking. And at this moment, I must also remind you of something essential: our Token Redemption Carnival is still underway.

Even amid such volatility, we remain convinced that stability within the token market allows us to refine portfolios and preserve their balance. It is much like finding the most reliable vessel on a turbulent journey—one that carries you steadily through the waves and, in time, delivers you safely to the other shore.

The recent downturn in U.S. equities aligns closely with the trajectory I anticipated for late August through the end of September. During this period, the market has been unsettled by shifting expectations surrounding Federal Reserve policy—at times leaning toward a pause, at other moments debating the magnitude of a potential rate cut. Such fluctuations in data releases and official

FinLogic

commentary inevitably weigh on market performance.

Taking the S&P 500 as a reference point, the index met significant resistance just below the 6,500 level, precisely as I had projected, and has since pulled back into a corrective phase. This adjustment is likely to continue into the week ahead, with Wednesday's release of the Fed's meeting minutes, Thursday's jobless claims report, and Friday's address by the Fed Chair at the central bank's annual symposium.

A year ago, in the lead-up to the September rate cut, a similar sequence of data points and events unsettled the markets. History does not repeat itself, but it often moves to the same rhythm.

The U.S. Department of Commerce has announced that 407 categories of steel and aluminum products will be added to the tariff list, subject to a 50% rate. This development was a central trigger behind today's sharp market decline.

That said, it is unlikely to alter the course of the Federal Reserve's September rate cut. Both predictive models and the underlying policy considerations—reinforced by a broad set of economic indicators—continue to point toward that outcome.

The greater attention, however, rests on Chair Powell's remarks this coming Friday. His statement may well serve as a market inflection point, and we expect him to signal the likelihood of a September cut.

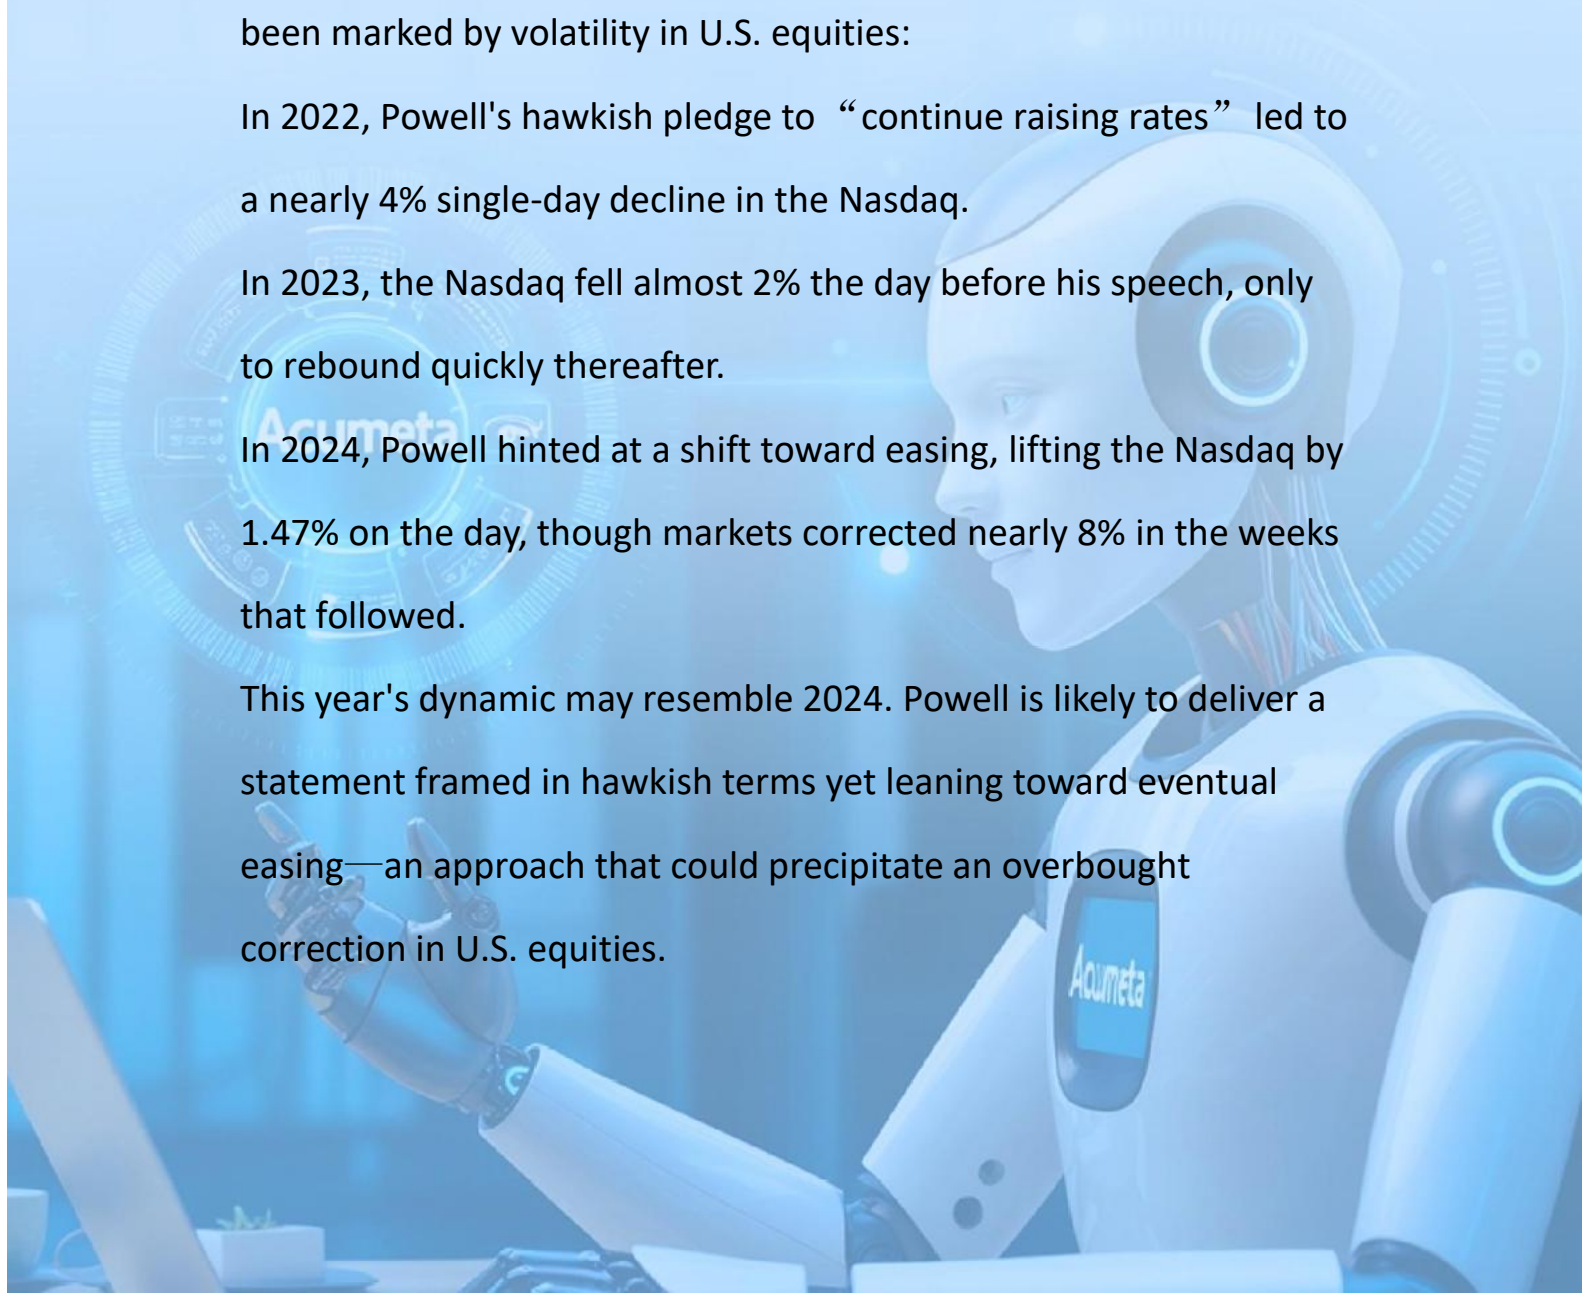

Historically, the days surrounding the Jackson Hole symposium have been marked by volatility in U.S. equities:

In 2022, Powell's hawkish pledge to “continue raising rates” led to a nearly 4% single-day decline in the Nasdaq.

In 2023, the Nasdaq fell almost 2% the day before his speech, only to rebound quickly thereafter.

In 2024, Powell hinted at a shift toward easing, lifting the Nasdaq by 1.47% on the day, though markets corrected nearly 8% in the weeks that followed.

This year's dynamic may resemble 2024. Powell is likely to deliver a statement framed in hawkish terms yet leaning toward eventual easing—an approach that could precipitate an overbought correction in U.S. equities.

Since the rate cut is now a certainty, the short-term pullbacks in BTC and ETH represent, in fact, an optimal entry point at a cost advantage. The **【Win the Race for Reserve Digital Token Challenge】** continues, and the FGT tokens you have received are likewise an integral part of your personal reserve strategy.

Today, Fed Vice Chair for Supervision Bowman suggested that staff should be permitted to hold small amounts of digital assets.

Relaxing such restrictions, she noted, could strengthen recruitment and retention of qualified bank examiners—while even a “minimal” holding of cryptocurrencies and other digital assets would help staff gain practical familiarity with the products themselves. There is no substitute for firsthand experience in understanding the process of

holding and transferring these assets.

Her remarks underscore once again that, under the Trump administration, regulatory agencies are signaling a more constructive stance toward the crypto space. And it is within this environment that our Token Redemption Carnival unfolds.

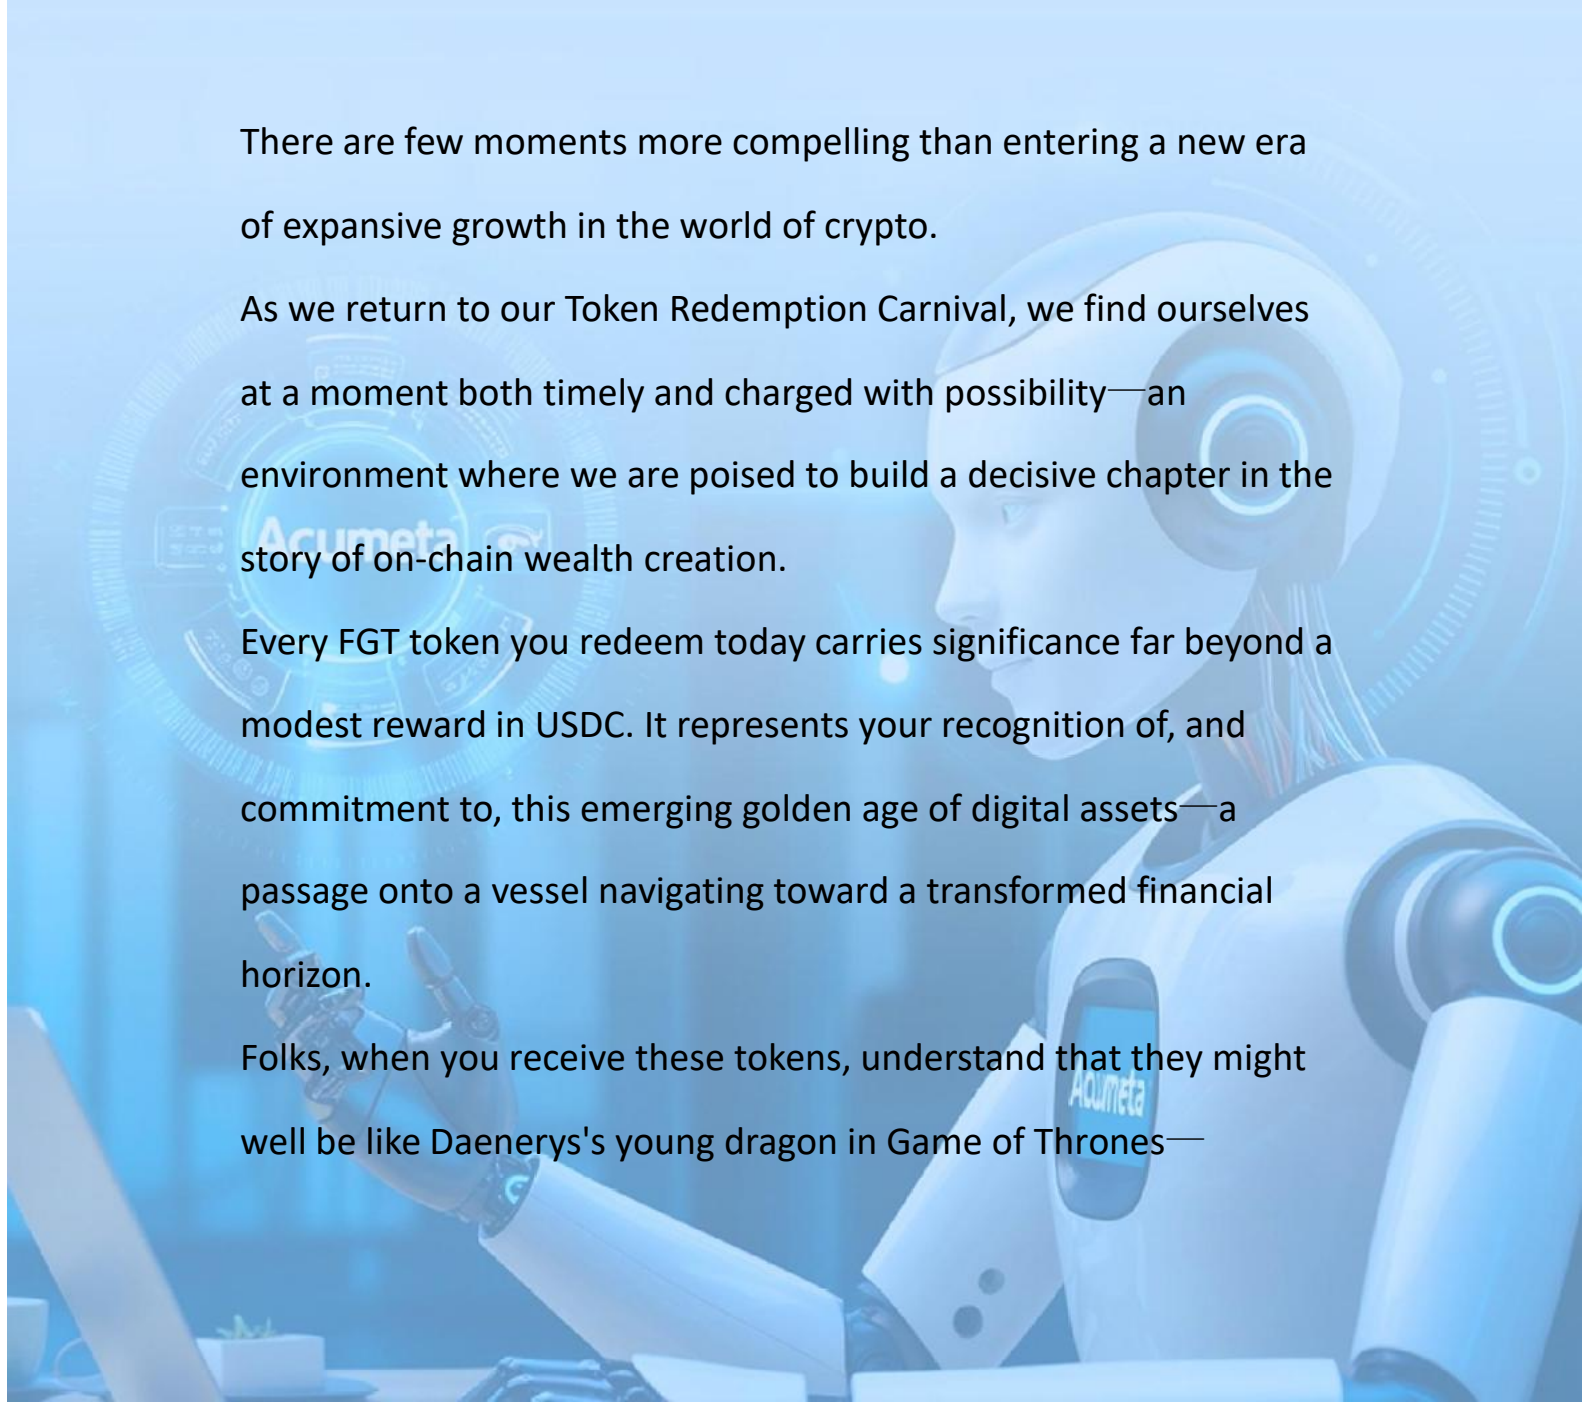

Would you not agree that one ought to recognize—and make full use of—the wealth-building mission this era has placed in our hands?

There are few moments more compelling than entering a new era of expansive growth in the world of crypto.

As we return to our Token Redemption Carnival, we find ourselves at a moment both timely and charged with possibility—an environment where we are poised to build a decisive chapter in the story of on-chain wealth creation.

Every FGT token you redeem today carries significance far beyond a modest reward in USDC. It represents your recognition of, and commitment to, this emerging golden age of digital assets—a passage onto a vessel navigating toward a transformed financial horizon.

Folks, when you receive these tokens, understand that they might well be like Daenerys's young dragon in Game of Thrones—

seemingly small at first, but destined to unleash extraordinary power at the right moment. And make no mistake, the value of my Quantitative Think Tank Center will grow.

This growth rests on two foundations. The first is driven by intrinsic valuation needs, propelling acquisitions and partnerships forward.

The second is the favorable macroeconomic backdrop, particularly the opportunities presented by the Fed's current cycle of interest rate cuts.

The token FGT, as illustrated in the accompanying chart, has registered two consecutive days of price appreciation. What does this signify?

First, within the broader context of a steadily rising market, the successful launch of the Token Redemption Carnival has served as a catalyst. This event drew additional capital from outside the immediate trading community, generating a wave of short-term upward momentum.

Second, a number of committed community members—investors whose convictions are aligned with the project's principles—contributed to the increase in demand. Their actions further supported the appreciation, particularly as the market capitalization of token FGT has become a component in the broader “Win the Race for Reserve Digital Token Challenge.”

In parallel, Acumeta's demonstrable progress in recent cycles—specifically in advancing intelligence and reasoning capabilities—has reinforced institutional confidence and heightened expectations. This, too, has introduced new sources of buying pressure.

At the current price level, with a total issuance of 500 million units, token FGT's market capitalization is now approaching \$600 million.

This trajectory reflects not mere speculation, but the cumulative effect of recognition and validation expressed through sustained market participation.

The prevailing trend of Fed rate cuts in the external environment has been a pivotal catalyst for the recent surge in token FGT's price.

Even in the absence of new account protection restrictions, these tokens are increasingly worth holding for an extended horizon.

A rate cut equates to cheaper borrowing. Such “cheap money” naturally seeks higher-yielding assets, with BTC and ETH

representing classic high-risk, high-reward opportunities. BTC, for instance, surpassed \$70,000 in the first half of 2024, establishing a historical high.

Much of this trajectory stems from investors' reasoning: rate cuts → weaker dollar → liquidity expansion → appreciation of risk assets → heightened demand for cryptocurrencies. Fed easing makes capital more abundant and less costly.

When safe-asset yields decline, capital inevitably migrates toward more dynamic avenues of return. In this context, cryptocurrencies have emerged as the preferred “high-yield playground” for investors. BTC's remarkable ascent in 2024 exemplifies the perfect confluence of rate-cut expectations and ETF-driven liquidity expansion.

What are the promising areas in AI + Healthcare?

Early Disease Detection	Drug Research and Discovery	Multi-omics Sequencing	Virtual Healthcare and Remote Monitoring
 GH Guardant Health	 RXRX Recursion Pharmaceuticals	 TEM Tempus AI	 MOH Molina Healthcare
 EXAS Exact Sciences	 SDGR Schrodinger	 TXG 10X Genomics	 CAH Cardinal Health
 AVAI Avant Technologies	 BIOA BioAge Labs	 ILMN Illumina	 TDOC Teladoc Health

The sustained rise of token FGT represents a long-term strategy—a process, a journey in which you both witness and benefit from the

FinLogic

unfolding promise of crypto.

Today, we cannot afford to sit idle, waiting. Another exciting development at our doorstep is the imminent launch of the new token STO project. It is reminiscent of the moments just before Musk's Starship ignition—charged with anticipation and unwavering focus.

This morning, I discussed the new token STO project: AIG. The project is beginning to generate tangible market effects, integrating AI with genetic medicine. It promises not only to lower healthcare costs but also to deliver more effective treatments.

The attention on AI-driven healthcare stocks in the U.S. market already validates this trajectory. Pelosi's new holdings, for instance, doubled within a matter of weeks. The value of AI healthcare stocks stems from operational capability and expansive patient data repositories. Large-scale health datasets for AI training are immensely valuable, establishing a unique market position for these companies and projects through their AI applications and proprietary data assets.

So we naturally ask: will the AIG new token STO issuance deliver returns beyond expectations?

***SUBSCRIBE TO
THE NEW AIG TOKEN***

EXPERIENCE THE PROFIT CARNIVAL

AIG

Reflecting on our experience with the BLSH/FIG IPOs, I identified several key benchmarks. Ultimately, Acumeta provided remarkably accurate predictive data on the listing prices—an accuracy witnessed firsthand by program participants:

* FIG was issued at \ \$33, Acumeta predicted a listing price of \ \$86, and the actual opening price on day one was \ \$85.

* BLSH was issued at \ \$32, Acumeta predicted \ \$90, and the opening price on day one indeed matched \ \$90.

This exemplifies the meticulous, data-driven valuation process for a new stock, verified through extensive computation.

So the question for today: can AIG undergo a similar validation? Can we anticipate its opening-day listing price with the same level of precision?

Acumeta's comprehensive quantitative analysis indicates:

In 2024, the AI-driven value of the North American healthcare market is projected at \$14.3 billion.

This market is expected to grow from \$19.07 billion in 2025 to \$24.91 billion by 2032, reflecting a compound annual growth rate of 44.4% during the forecast period.

During the COVID-19 pandemic, AI's role in early diagnosis and virus detection accelerated the adoption of AI-based tools in hospitals.

The rising number of R&D initiatives, coupled with the need to support healthcare workloads, underscores market expansion from 2025 to 2032.

The U.S. dominated the North American market in 2024. The presence of advanced medical facilities and highly skilled professionals strongly fueled domestic growth. Emphasizing the adoption of cutting-edge technology to reduce workloads is a major driver behind the expansion of AI-based medical devices and hospital management solutions.

Accordingly, for the new token STO project, if AIG achieves just a 5% market penetration, its potential valuation falls in the \$1 – 1.5 billion range. In other words, the AIG blockchain token is far from a “small-scale innovation” —it holds the potential to become the next major player in the medical blockchain token ecosystem.

This is Acumeta's forecasted data—whether in the successful validation during new stock subscriptions or in the forward-looking

projection for the new token STO project, I consider it a decidedly positive signal.

The screenshot shows the ETHERMAC website with a navigation bar including links for Buy, Market, Trade, Currency Surfing, Copy Trading, STO, Innovation Fund, Security Center, and Stock. The main content area is titled "Announcement of New Token Subscription Launch" and is addressed to "Dear Valued Users." It states that the subscription for the new token [AIG] will officially commence on Wednesday, August 20, 2025, at 12:00 AM EDT. The announcement describes [AIG] as a groundbreaking medical initiative integrating AI with gene algorithm therapies. A sidebar on the left lists other articles, and the main text provides detailed token specifications and subscription instructions.

Announcement of New Token Subscription Launch

Dear Valued Users,

We are pleased to announce that the subscription for the new token [AIG] will officially commence on Wednesday, [August 20, 2025], at 12:00 AM EDT.

[AIG] represents a groundbreaking medical initiative that integrates AI with gene algorithm therapies, aiming to drive innovation and breakthroughs in the healthcare sector. By leveraging advanced AI technologies and genetic algorithms, the project seeks to develop personalized treatment solutions, offering patients more effective and precise medical care.

Token Details

Token Name: AIG
Total Supply: 240 million tokens
Subscription Period: August 20, 2025, 12:00 AM – August 27, 2025, 12:00 AM (UTC-5)
How to Subscribe: Participate via the "STO" section on ETHERMAC Exchange
Subscription Price: 0.5 USDC per token
Minimum Subscription: 1,500 tokens
Maximum Subscription: 500,000 tokens
Winning Announcement Date: August 28, 2025, 12:00 PM (UTC-5)

Subscription Process:

Log in to your [ETHERMAC Exchange] account.
Navigate to the "STO" page.
Select [AIG], enter your desired subscription amount, confirm, and submit.

Important Notes:

Please ensure your account has sufficient USDC. For exchanges or top-ups, contact a trusted P2P merchant promptly.
Successful subscriptions will be announced according to the schedule.
Monitor the subscription progress carefully via the status bar.

Closing Remarks

The subscription launch of [AIG] represents an exceptional opportunity for you to engage in digital asset investing—seize the moment and take action.

[View more](#)

Do you understand what it means that the AIG token project is valued at \$1 – 1.5 billion?

Examining the official white paper tokenomics, it's clear: AIG's total supply is 600 million tokens, which implies an issuance price of 0.5 USDC per token. This corresponds to a current fundraising scale of \$300 million.

Meanwhile, market valuation and trend tracking suggest a valuation of \$1 – 1.5 billion, which translates into a potential 300 – 500% price increase.

In other words, the AIG token's potential opening price on its first day of listing could range from 1.5 to 2.5 USDC.

And the cost for us to subscribe to the new AIG token is only 0.5 USDC.

Is this not a significant opportunity for wealth appreciation? Do you see it?

Indeed, history may not repeat itself, but history, treading familiar rhythms, tells us this is a remarkable on-chain wealth movement.

Since this is a reliable new token STO project, the prospect of a 300 – 500% profit upside is entirely foreseeable.

Your most cautious course of action could be what I call an “experiential participation.” If you feel unfamiliar with cryptocurrencies or harbor concerns about a new token STO, then this type of participation is your optimal choice.

How to participate? Inform the official support team at the ETHERMAC Cryptocurrency Exchange that you wish to stake the token FGT.

You'll gain liquidity in USDC.

Indeed, according to the Token Redemption Carnival guidelines, you can access a minimum of 800 USDC in staked financing funds.

You must ensure that the number of FGT tokens staked is no less than 1,000.

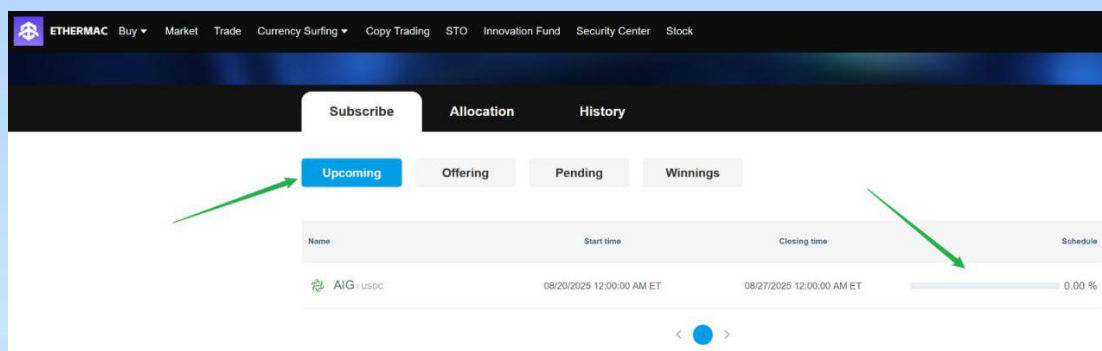

Once you submit this request, you secure the 800 USDC funding to participate.

According to the official announcement, the minimum subscription

quantity is 1,500 AIG tokens—meaning your 800 USDC fully covers this threshold.

Stake your tokens now! Tomorrow, we'll be claiming this experiential advantage!

Of course, this AIG new token STO subscription isn't a blind box.

Unlike subscribing to IPOs like FIG/BLSH, where you endure a long, nerve-wracking wait and leave allocations to the whims of investment banks or auction-style blind processes, nothing like that occurs in the crypto market.

Under MSB regulations for STO new token projects, a reliable, high-fidelity, and secure market-tracking presentation is required.

So, when we subscribe to the AIG new token, we can actually see the market demand data—I call this the “visualized subscription data bar.”

You'll be able to access it in your account under the STO section on the ETHERMAC Exchange.

Of course, since subscriptions haven't started today, the data won't yet appear—but starting tomorrow, all subscription data from the

market will be visible.

This allows you to see exactly how much capital is chasing the token, whether it's hot or cold, and how the market is reacting—giving you a fully informed, first-hand experience of subscribing to AIG.

Do you appreciate this forward-looking data insight? Participate tomorrow and keep a close eye on it!

Folks, brave warriors who are seizing AIG:

Now, we arrive at the most thrilling part of the program—a moment that could make your wallet “dance” !

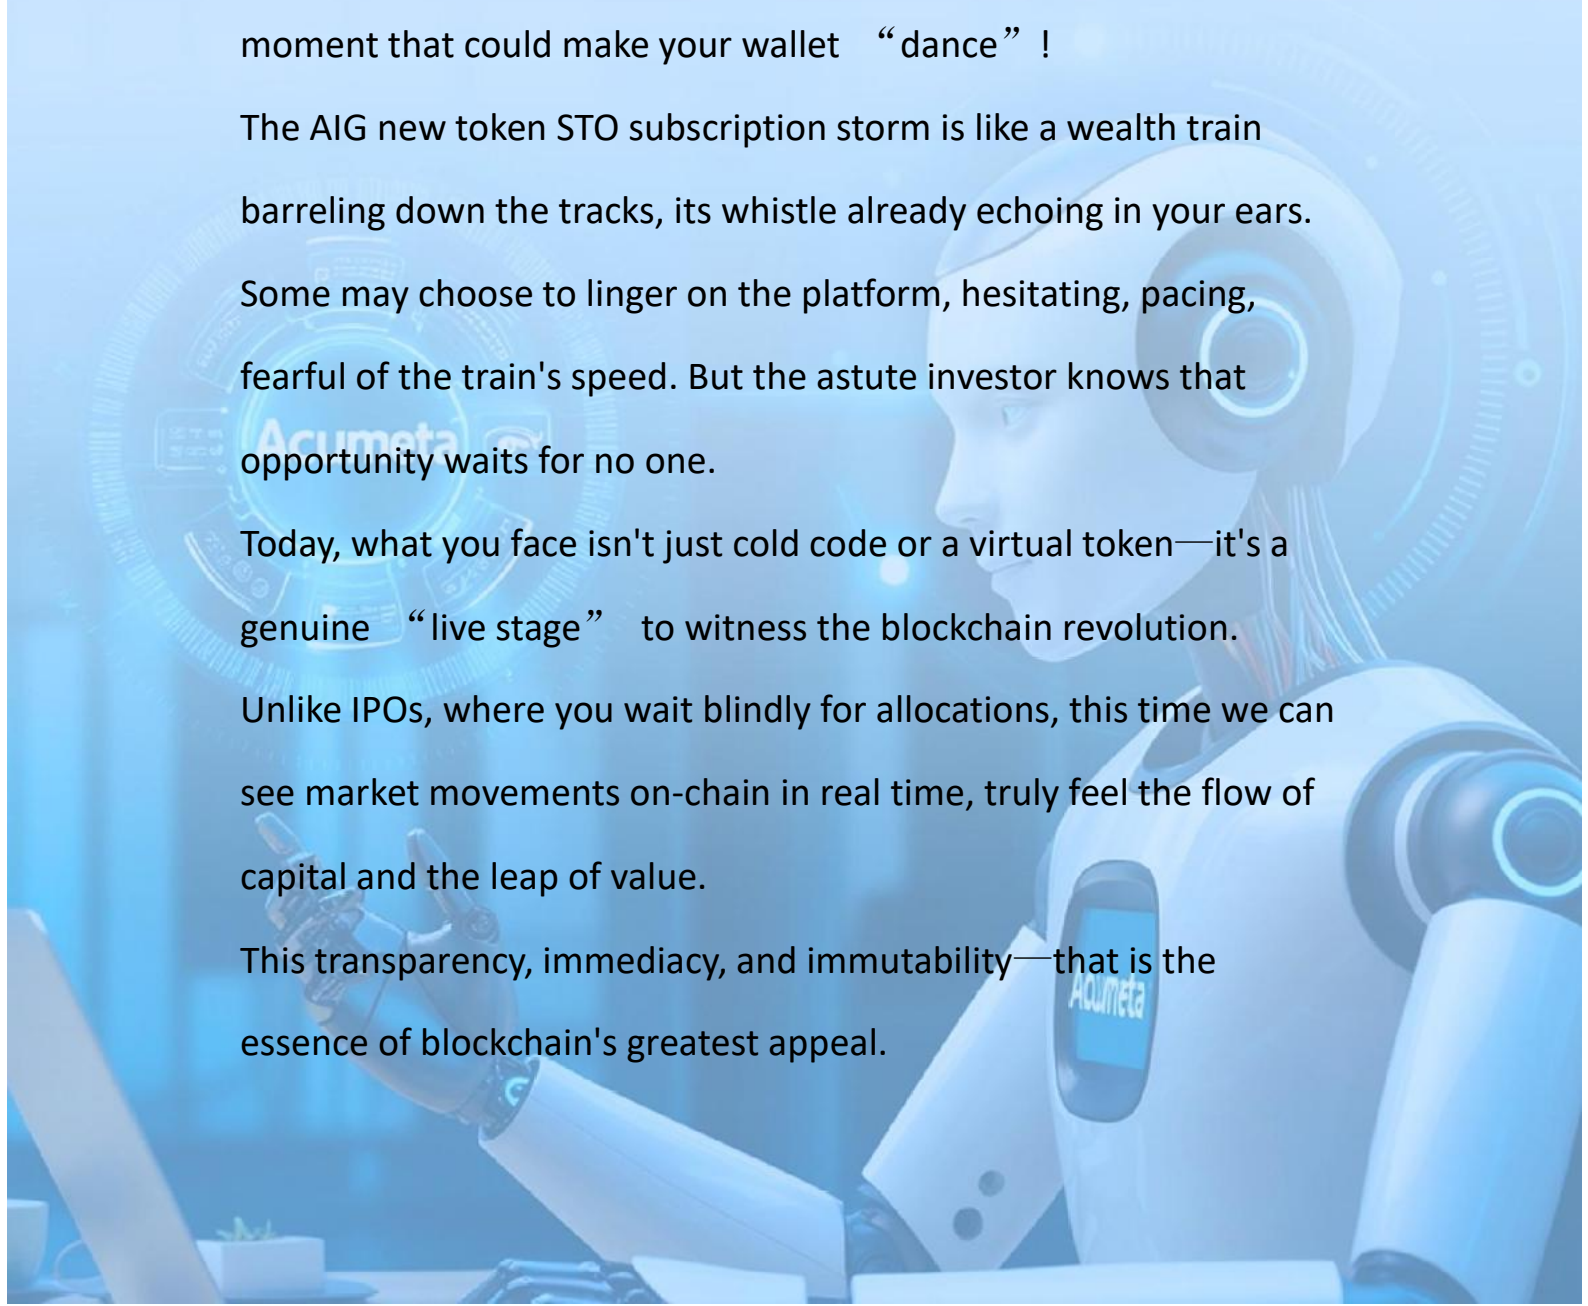

The AIG new token STO subscription storm is like a wealth train barreling down the tracks, its whistle already echoing in your ears.

Some may choose to linger on the platform, hesitating, pacing, fearful of the train's speed. But the astute investor knows that opportunity waits for no one.

Today, what you face isn't just cold code or a virtual token—it's a genuine “live stage” to witness the blockchain revolution.

Unlike IPOs, where you wait blindly for allocations, this time we can see market movements on-chain in real time, truly feel the flow of capital and the leap of value.

This transparency, immediacy, and immutability—that is the essence of blockchain's greatest appeal.

On Wednesday's carnival, you stake the token you redeemed into 800 USDC, then subscribe to the AIG new token. Step back for a moment—even if rough waters hit, your tokens were acquired through the event, so your principal remains intact; and if you secure an allocation, future profits could double, triple, or even increase tenfold.

This is more than an investment—it's a choice of conviction, a statement of courage. In the game of wealth, it has always favored those who step forward first. Tomorrow, the session continues, and we'll meet again!
