Thursday, Aug 28, 2025

An exhilarating Thursday, pals, the fortunate winners of AIG:

Good morning! Let us set out with the sweetest sense of anticipation and hope to seek Thursday's investment answer.

According to last night's official announcement, at 10:00 am Eastern today, we will together witness the listing and trading of AIG's new token.

Can you feel that energy on the verge of breaking out?

Because it is right before us—the debut of AIG's new token trading is about to begin. And this is not merely a transaction, it is a 'supercharged' wealth movement at the very frontier of the crypto world.

Put simply, it is like the entrepreneurial wave of Silicon Valley, or the carnival on the eve of the dot-com boom, and no matter where you stand, you can feel the heat rushing toward you.

Now consider the broader macro backdrop—the Federal Reserve's September rate cut is all but certain. Even more striking is a newly surfaced 2025 list of major U.S. listed companies holding crypto reserves, showing that global corporate reserves have already exceeded \$132 billion.

This is no small sum, it is a super signal, well beyond market expectations.

What does it mean? It means that Wall Street's heavyweights have long been in the game. What you thought was merely a tentative trial has already become a marathon of capital.

History, as ever, echoes itself.

When oil prices fell, the shrewd accumulated reserves; when the internet bubble came, some fled while others endured, and those

who stayed became the winners.

Today, in the crypto world, that same scene is unfolding anew.

Only this time, the 'oil' and the 'internet' are the new token STO projects.

And under the tailwind of a rate-cutting cycle, these projects will emerge as the darlings of wealth, like stars on the stage, with every spotlight trained upon them.

Amid this capital surge triggered by the September rate cut, and within this value revolution led by corporate giants, STO projects will be the fastest, most luxurious, and most dazzling supercars on the track.

Because new token STOs are regulated, grounded in real project value, they are not 'air coins.' They are the bridge connecting the real economy with the crypto future.

And the debut listing of AIG's new token is the starting gun of this

supercharged wealth movement!

This is not merely a transaction, it is a grand celebration, a carnival of wealth!

We have completed all the research, examined every card, and we know which players are seated inside the arena.

History has proven time and again, the winners are never the hesitant, but those who dare to press 'confirm' at decisive moments.

So now, bring your passion, bring your desire, bring your conviction in the future, and join me in embracing this supercharged moment that belongs to us.

On Thursday, after AIG new token makes its debut listing, what should we do?

1. Based on the number of AIG tokens you hold, execute a sell-off immediately after the market opens to lock in profits.

Why the urgency in securing profits?

From the real-world experience of FIG/BLSH listings, we saw that after the initial price surge on listing day, the early holders with cost advantages distributed their positions at the peak, leading to intraday price declines.

FinLogic

Such declines mean that many participants, having secured advantageous subscription costs, choose to lock in profits, adopting a cautious stance toward subsequent secondary market trading. Because they understand that when prices become inflated, risk inevitably returns. Therefore, the optimal choice is clear: once listed, sell the allotment obtained through subscription, lock in profits directly, and turn away with ease.

Do you agree?

Enjoying a 0 risk STO project is not only reflected in the subscription stage, but even more clearly in the very first moment after listing: the advantage of being first.

Indeed, consider today's AIG new token listing price, which has surpassed 2 USDC. This shows that all the tokens you hold were acquired at 0.5 USDC.

That is an exceptionally rich profit cushion, and this is precisely why today, after listing, the strategy is to sell rather than to buy.

The reason is that we cannot be certain how its price will rise or fall in the future. All forms of uncertainty and speculative sentiment may drive volatility. What we must seek is the most certain path to winning: to hold the cost advantage with certainty, and at the right moment, realize it and depart with profits in hand.

This is the best interpretation of 0 risk investing, do you see it clearly now?

As of today's performance following AIG's listing, we can make a brief summary of the subscription experience:

First, the lesson from the allotment results is clear: in the subscription phase, one must adhere to the principle of time priority. This represents the quickest competitive edge in subscription.

And if large-volume subscription capital is combined with time priority selection, it can maximize the weighted advantage in allotment distribution. Our experience with the AIG new token has been sufficient proof of this point.

Second, when passive dilution emerges, it is essential to adopt stacking/additional subscriptions. This subscription approach is intended to secure the most stable protection of the weighted allotment ratio.

Because markets often stage irrational frenzies of over subscription in ways we cannot anticipate, we must be prepared with a response.

Third, once the allotment has been secured, take your cost-advantaged chips and, immediately after the debut listing, sell

in order to lock in profits.

For what we seek is always the safest profit and the most stable cost
—so that we may become the ultimate winners.

This is the new winning mindset for on-chain wealth! Have you
mastered it?

Perhaps your 800 USDC subscription to AIG did not yield an
allotment large enough to make you pop champagne, light a cigar,
and set off fireworks in celebration.

But the excitement and enjoyment of participating in this on-chain
STO subscription have already been validated by your experience,
and they compel us to prepare even more proactively for the next
potential opportunity.

Of course, at this moment, what matters most is that we do not
become carried away with triumph. We still remember who helped
us experience the joy of victory in the AIG subscriptions.

FinLogic

It was the special carnival event from ETHERMAC crypto trading center: staking finance.

Well, according to today's official announcement, your 800 USDC staking finance subscription has now matured.

This was a short term, interest free financing, secured by the market value of the FGT token in your account, pledged as collateral under a trust-based on-chain mechanism. Such financing was made available to you through this system of mutual confidence on-chain.

Will you thank them for it?

I believe we should. For it was, in every sense, a superb subscription experience.

Since the 800 USDC in financing obtained by pledging FGT token has now been officially announced as due, all members of the community program, please take note.

This is your moment to demonstrate credibility and gentlemanly conduct.

Today, sell all the AIG holdings in your account, and repay the 800 USDC to the ETHERMAC crypto trading center.

Please contact the official customer service manager to help you complete this important step.

Once you take this highly creditworthy, gentlemanly action, the great vessel of your on-chain wealth is ready to set sail.

Because by selling AIG today, you not only retain the 800 USDC principal, you also have profits.

Check your account carefully, do you see additional surplus gains? You surely do. Withdraw all the profits you locked in through the 800 USDC subscription to AIG new token.

Consider it a gift, an efficient, winner's experience of profit in an STO subscription!

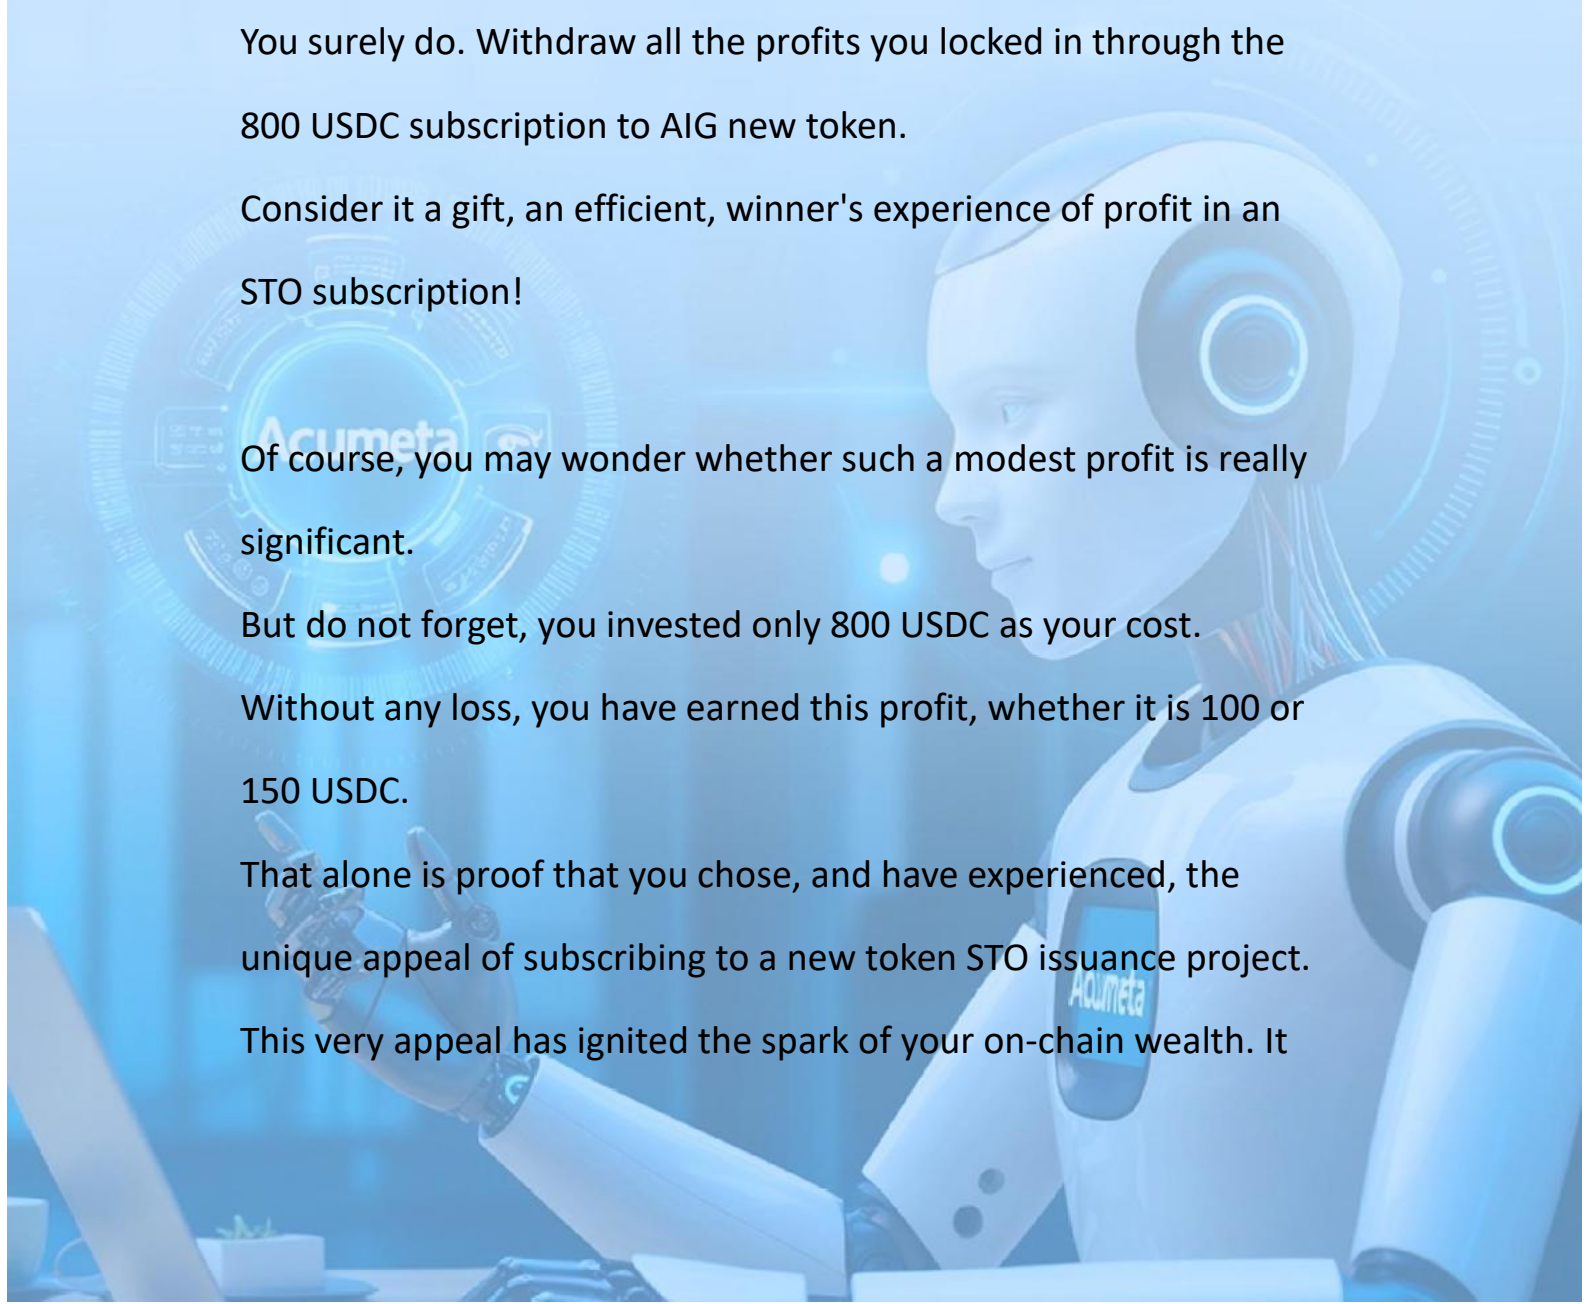

Of course, you may wonder whether such a modest profit is really significant.

But do not forget, you invested only 800 USDC as your cost.

Without any loss, you have earned this profit, whether it is 100 or 150 USDC.

That alone is proof that you chose, and have experienced, the unique appeal of subscribing to a new token STO issuance project.

This very appeal has ignited the spark of your on-chain wealth. It

illuminates the path ahead for your future appreciation in on-chain assets. Is that not, in itself, a fortunate and joyful thing?

Pals, go forth! Experience the ultra efficient profit withdrawal of on-chain assets!

For you must understand, the true value of these profits lies in showing you that you are achieving the right results, and those results came because you found the right investment approach and executed the right quantitative strategy, by choosing the right quantitative community service.

We, like you, feel proud and delighted for this!

The AIG new token frenzy—celebration, blessings, and the enjoyment of profit!

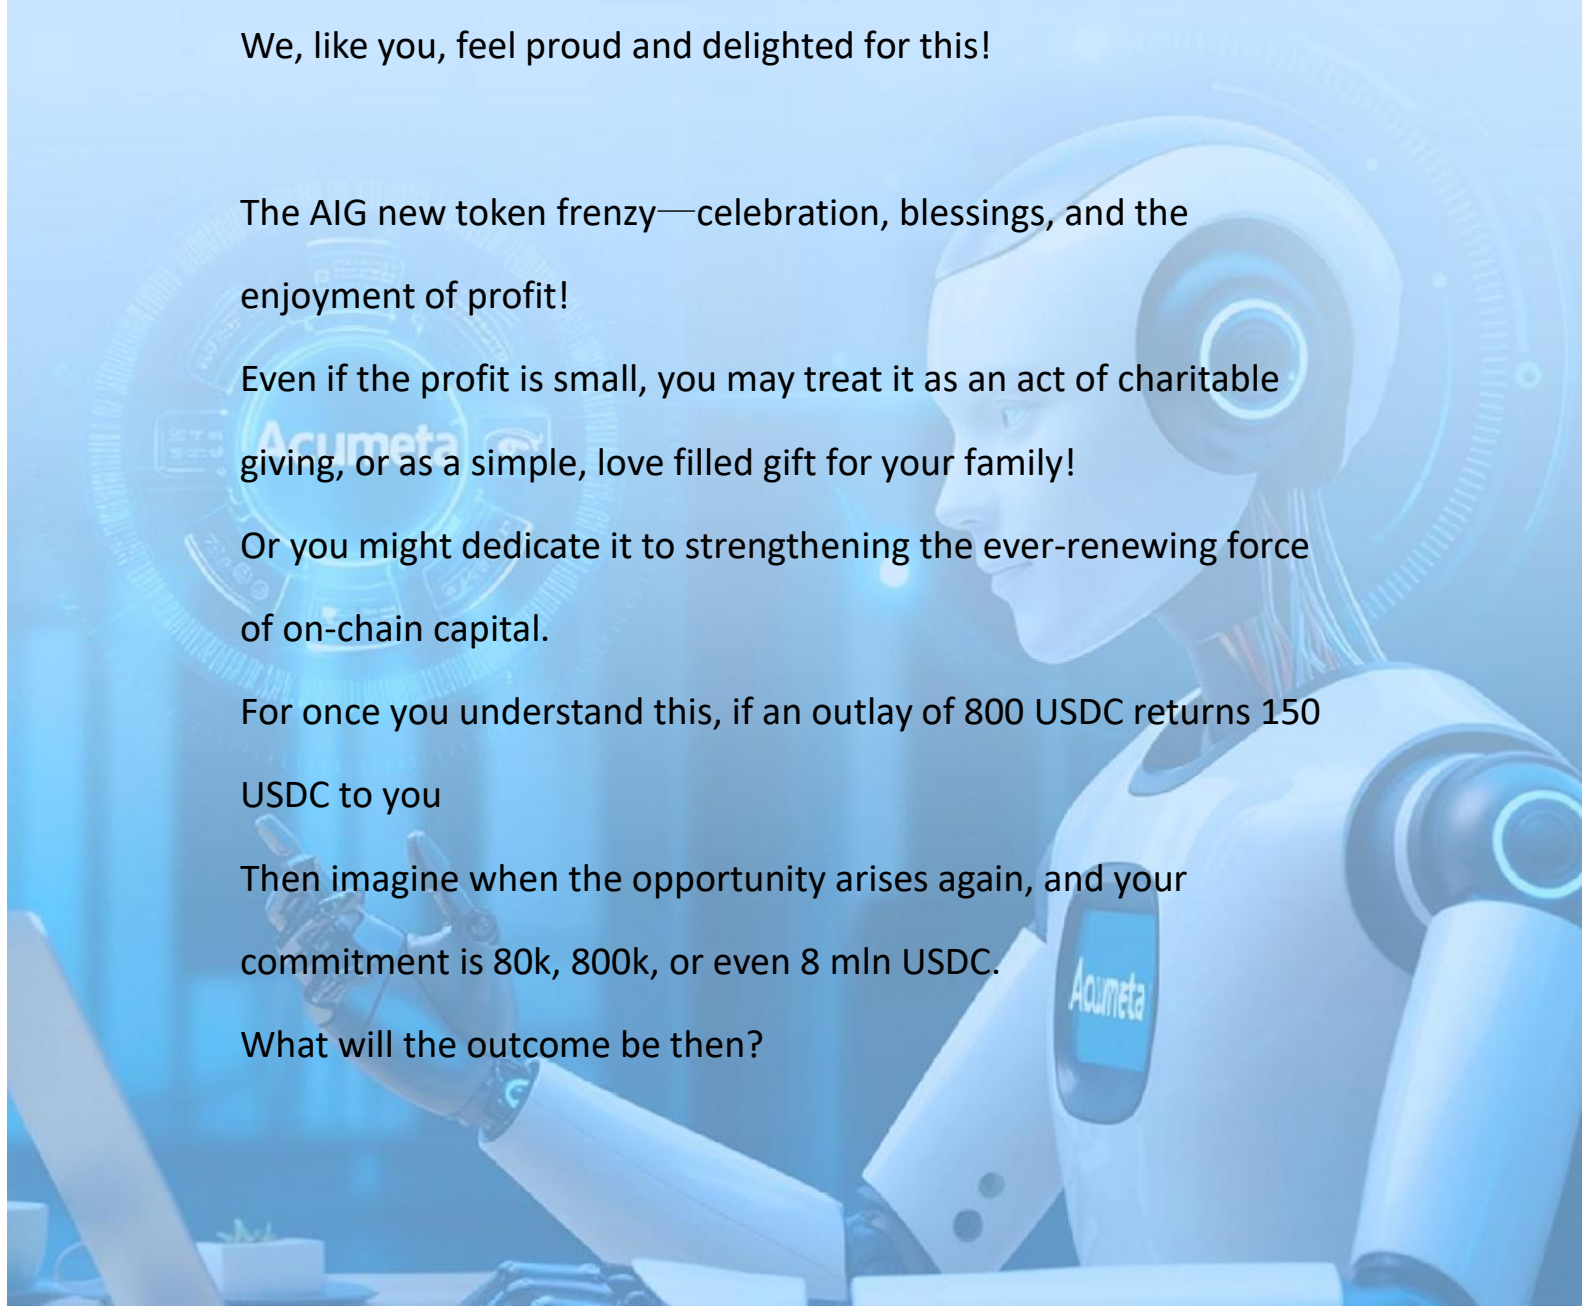

Even if the profit is small, you may treat it as an act of charitable giving, or as a simple, love filled gift for your family!

Or you might dedicate it to strengthening the ever-renewing force of on-chain capital.

For once you understand this, if an outlay of 800 USDC returns 150 USDC to you

Then imagine when the opportunity arises again, and your commitment is 80k, 800k, or even 8 mln USDC.

What will the outcome be then?

You will achieve greatness and become a true winner of on-chain wealth!

Opportunities always favor some, while others miss them, and still others fail even to perceive them.

And all of this depends on whether you truly commit and act.

I believe that through the AIG experience, you have already found the answer: you are one who is both courageous and ready to act.

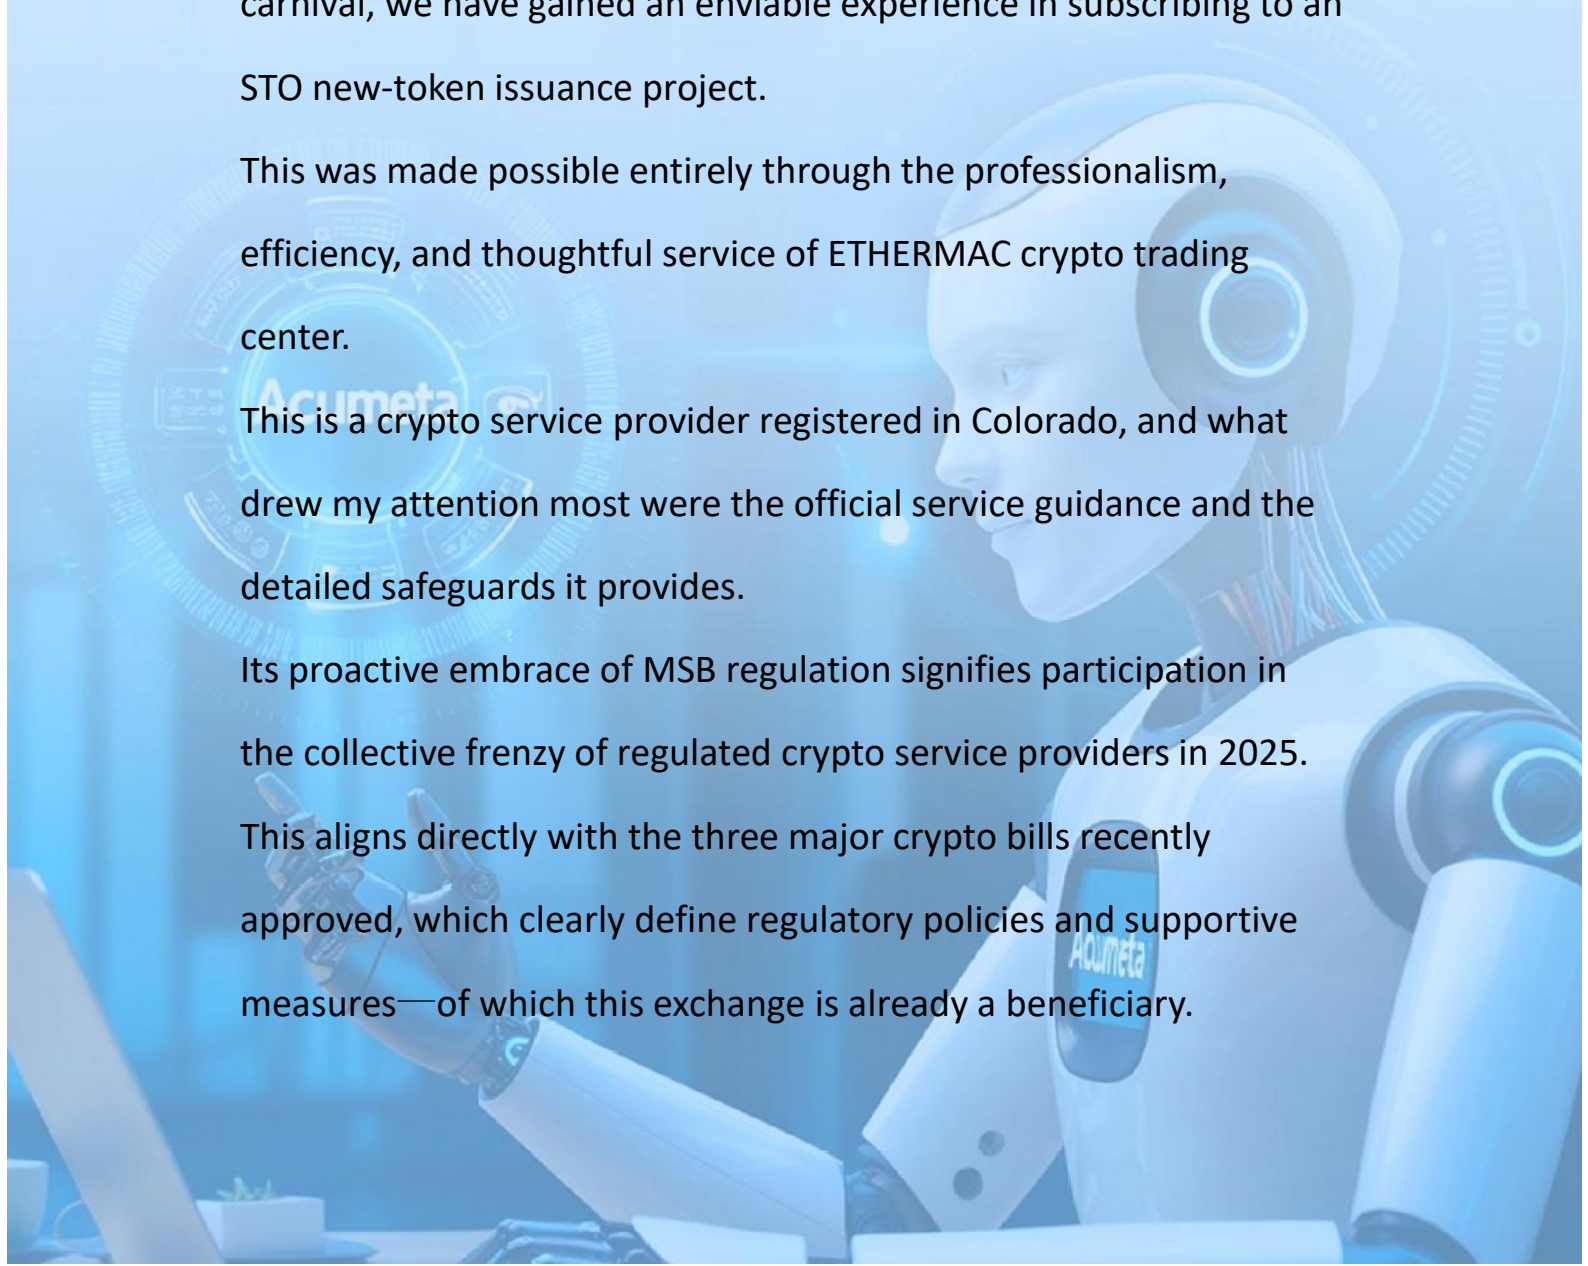

From this point, as we look back on this on-chain token redemption carnival, we have gained an enviable experience in subscribing to an STO new-token issuance project.

This was made possible entirely through the professionalism, efficiency, and thoughtful service of ETHERMAC crypto trading center.

This is a crypto service provider registered in Colorado, and what drew my attention most were the official service guidance and the detailed safeguards it provides.

Its proactive embrace of MSB regulation signifies participation in the collective frenzy of regulated crypto service providers in 2025.

This aligns directly with the three major crypto bills recently approved, which clearly define regulatory policies and supportive measures—of which this exchange is already a beneficiary.

Furthermore, its published list of secure assets, as well as its adoption of USDC as a settlement unit in line with Congressional stablecoin legislation, attest to the importance of embracing regulatory safety.

So, today, having experienced this firsthand, perhaps you can now understand that our choice was the right one.

And with the rising valuation of my FGT token, I particularly welcome the feedback from you, and from every community member holding FGT token, on your own experience.

Do you enjoy trading here?

Once we understand the compliance framework of ETHERMAC crypto trading center, we can confidently prepare, deposit, trade, and withdraw.

Of course, certain KYC requirements will appear in the withdrawal process.

So what exactly is KYC?

KYC means 'Know Your Customer.' In simple terms, it refers to the exchange requiring users to provide proof of identity (such as a passport or driver's license), and even proof of residence (such as bills or utility statements), in order to verify a user's true identity. It is just like opening an account at a bank, where the bank must

confirm who you are to ensure you are not an impostor or involved in money laundering.

On an exchange without real-name KYC, if something goes wrong, say a hacker attack, users will find it very difficult to protect their rights.

With KYC in place, the exchange can establish a stronger compliance system and also demonstrate verified user identities to regulatory authorities such as the MSB, thereby enhancing the platform's credibility.

Users who complete KYC typically enjoy benefits such as:

Higher withdrawal limits

Access to more trading tools (such as fiat on/off ramp leverage (currency surfing), binary options, or smart copy trading)

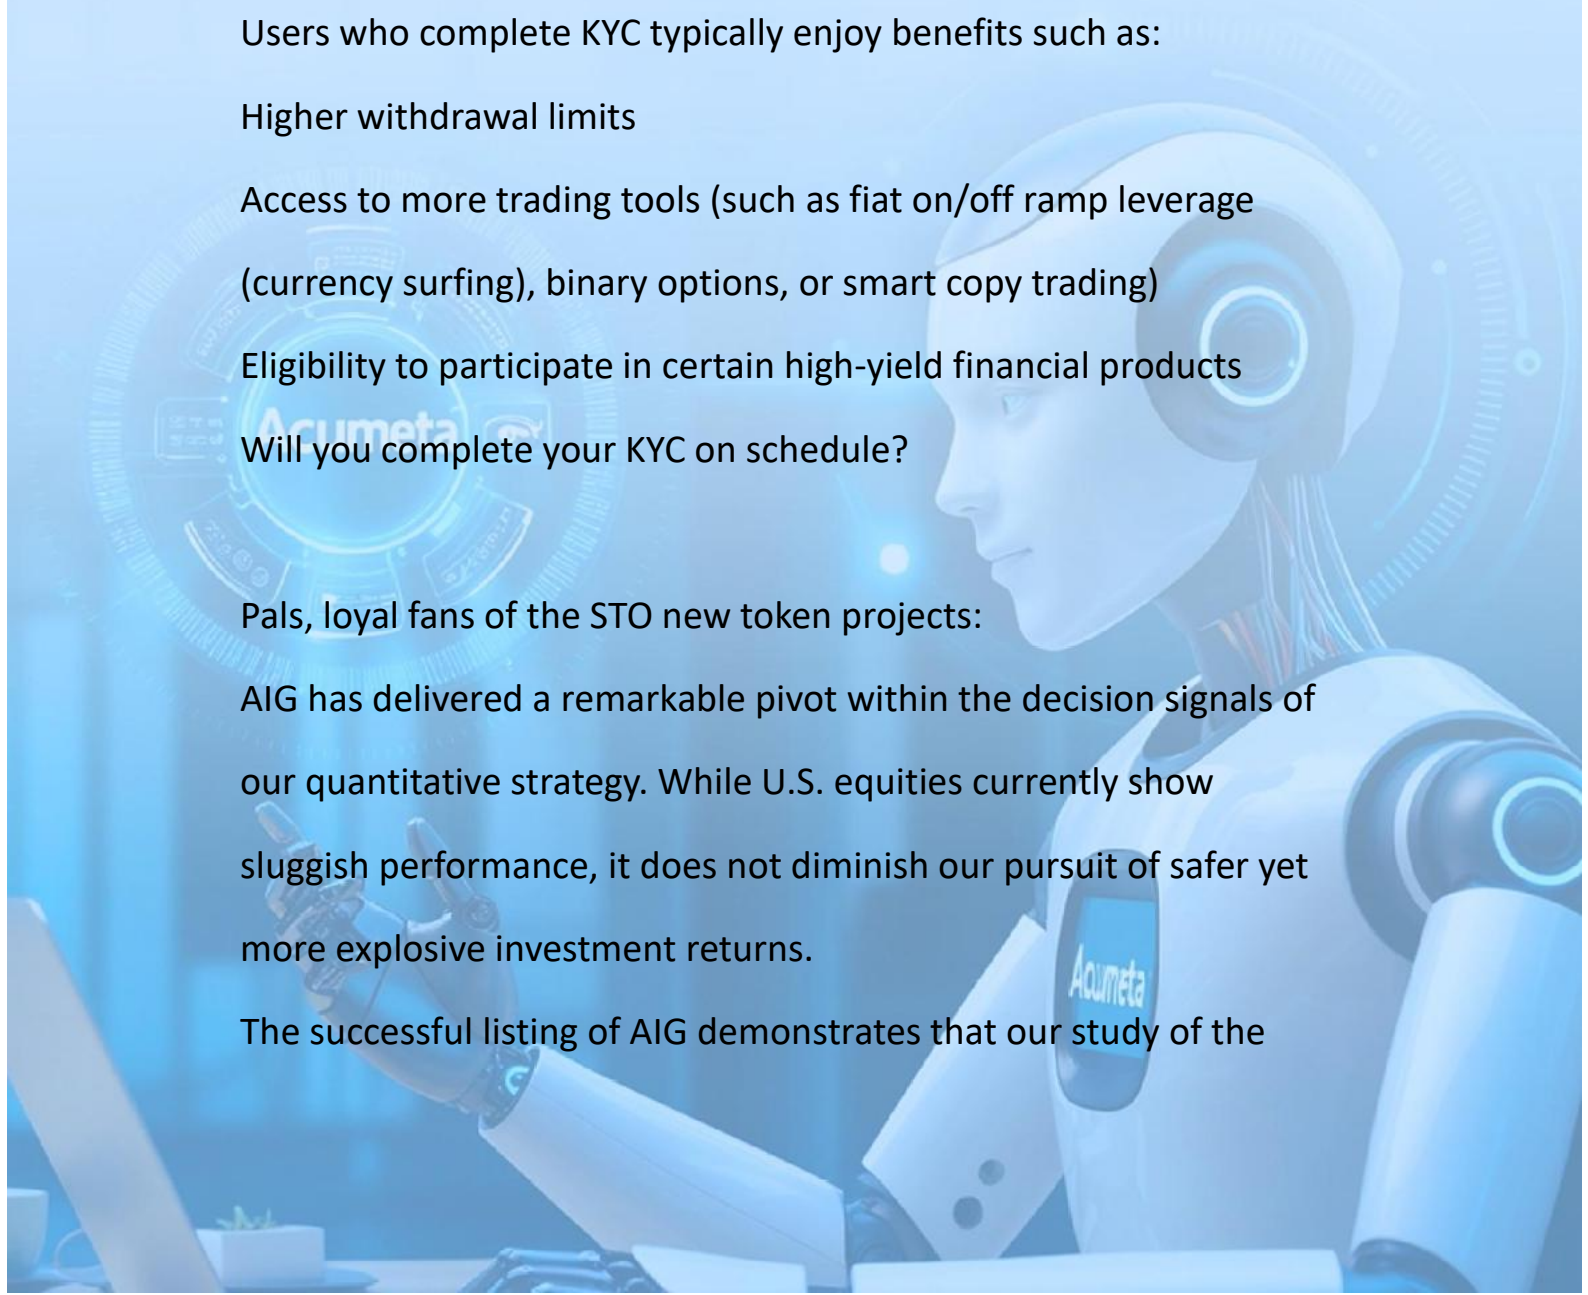

Eligibility to participate in certain high-yield financial products

Will you complete your KYC on schedule?

Pals, loyal fans of the STO new token projects:

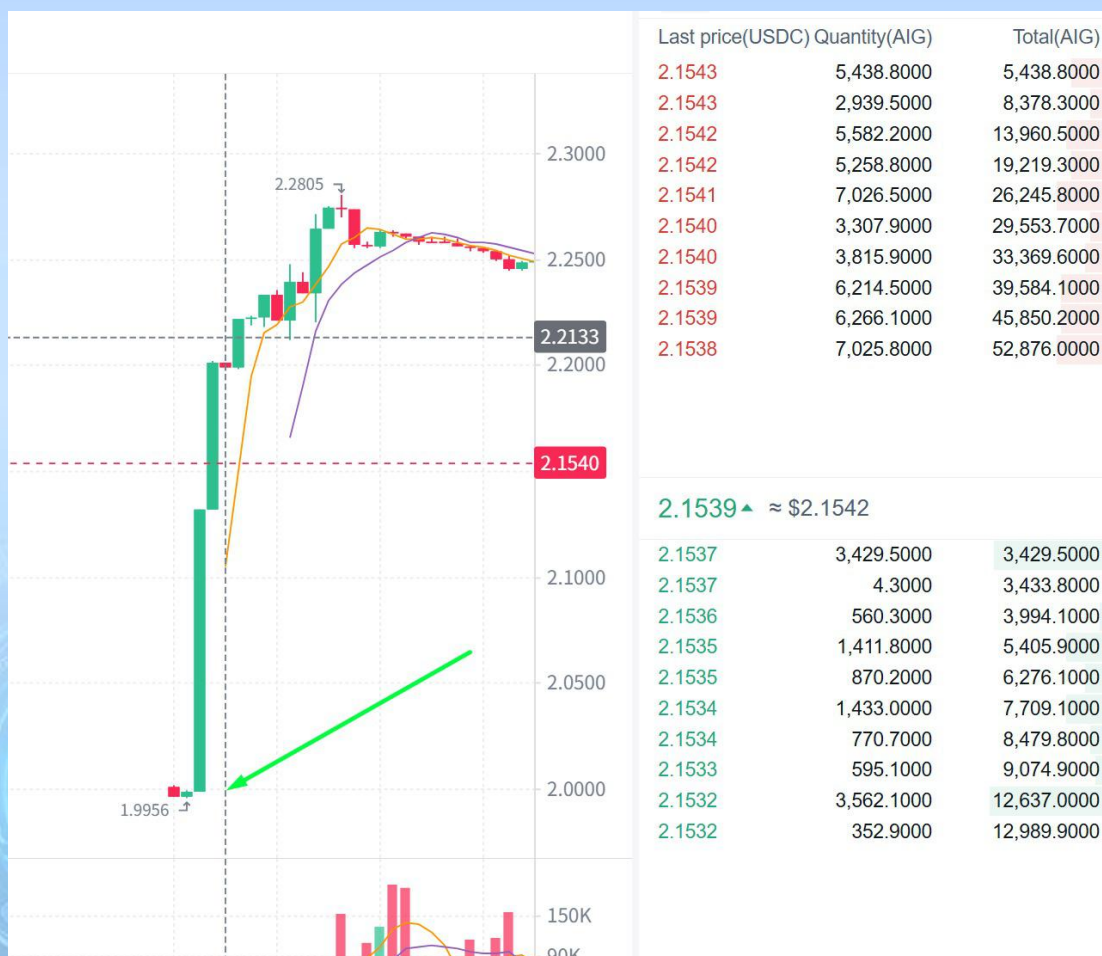

AIG has delivered a remarkable pivot within the decision signals of our quantitative strategy. While U.S. equities currently show sluggish performance, it does not diminish our pursuit of safer yet more explosive investment returns.

The successful listing of AIG demonstrates that our study of the

visualized subscription progress bar has yielded significant predictive value. This transparent subscription mechanism greatly benefits individual investors, for we no longer have to engage in blind guessing, waiting, or anxious anticipation as with traditional IPOs.

At this moment, we have clear, reliable guidance and methodology in hand.

The visualized progress bar also indicated that AIG would list at 2 USDC.

As the trading chart confirmed, the opening price at debut indeed showed the listing price of 2 USDC.

We can therefore reach an even more certain and reliable conclusion: in STO new token issuance projects, the subscription progress bar is an essential data point.

We must hold to it firmly! Watch it closely!

Ladies and gentlemen,

We have just experienced a flawless campaign.

With AIG's new token, we transformed it into a '0 risk subscription movement' and a '0 risk profit lock-in.' This is not merely a victory in numbers, it resembles a marathon of universal participation: some sprinted, others advanced steadily, yet in the end we all arrived at the same destination—security and confidence.

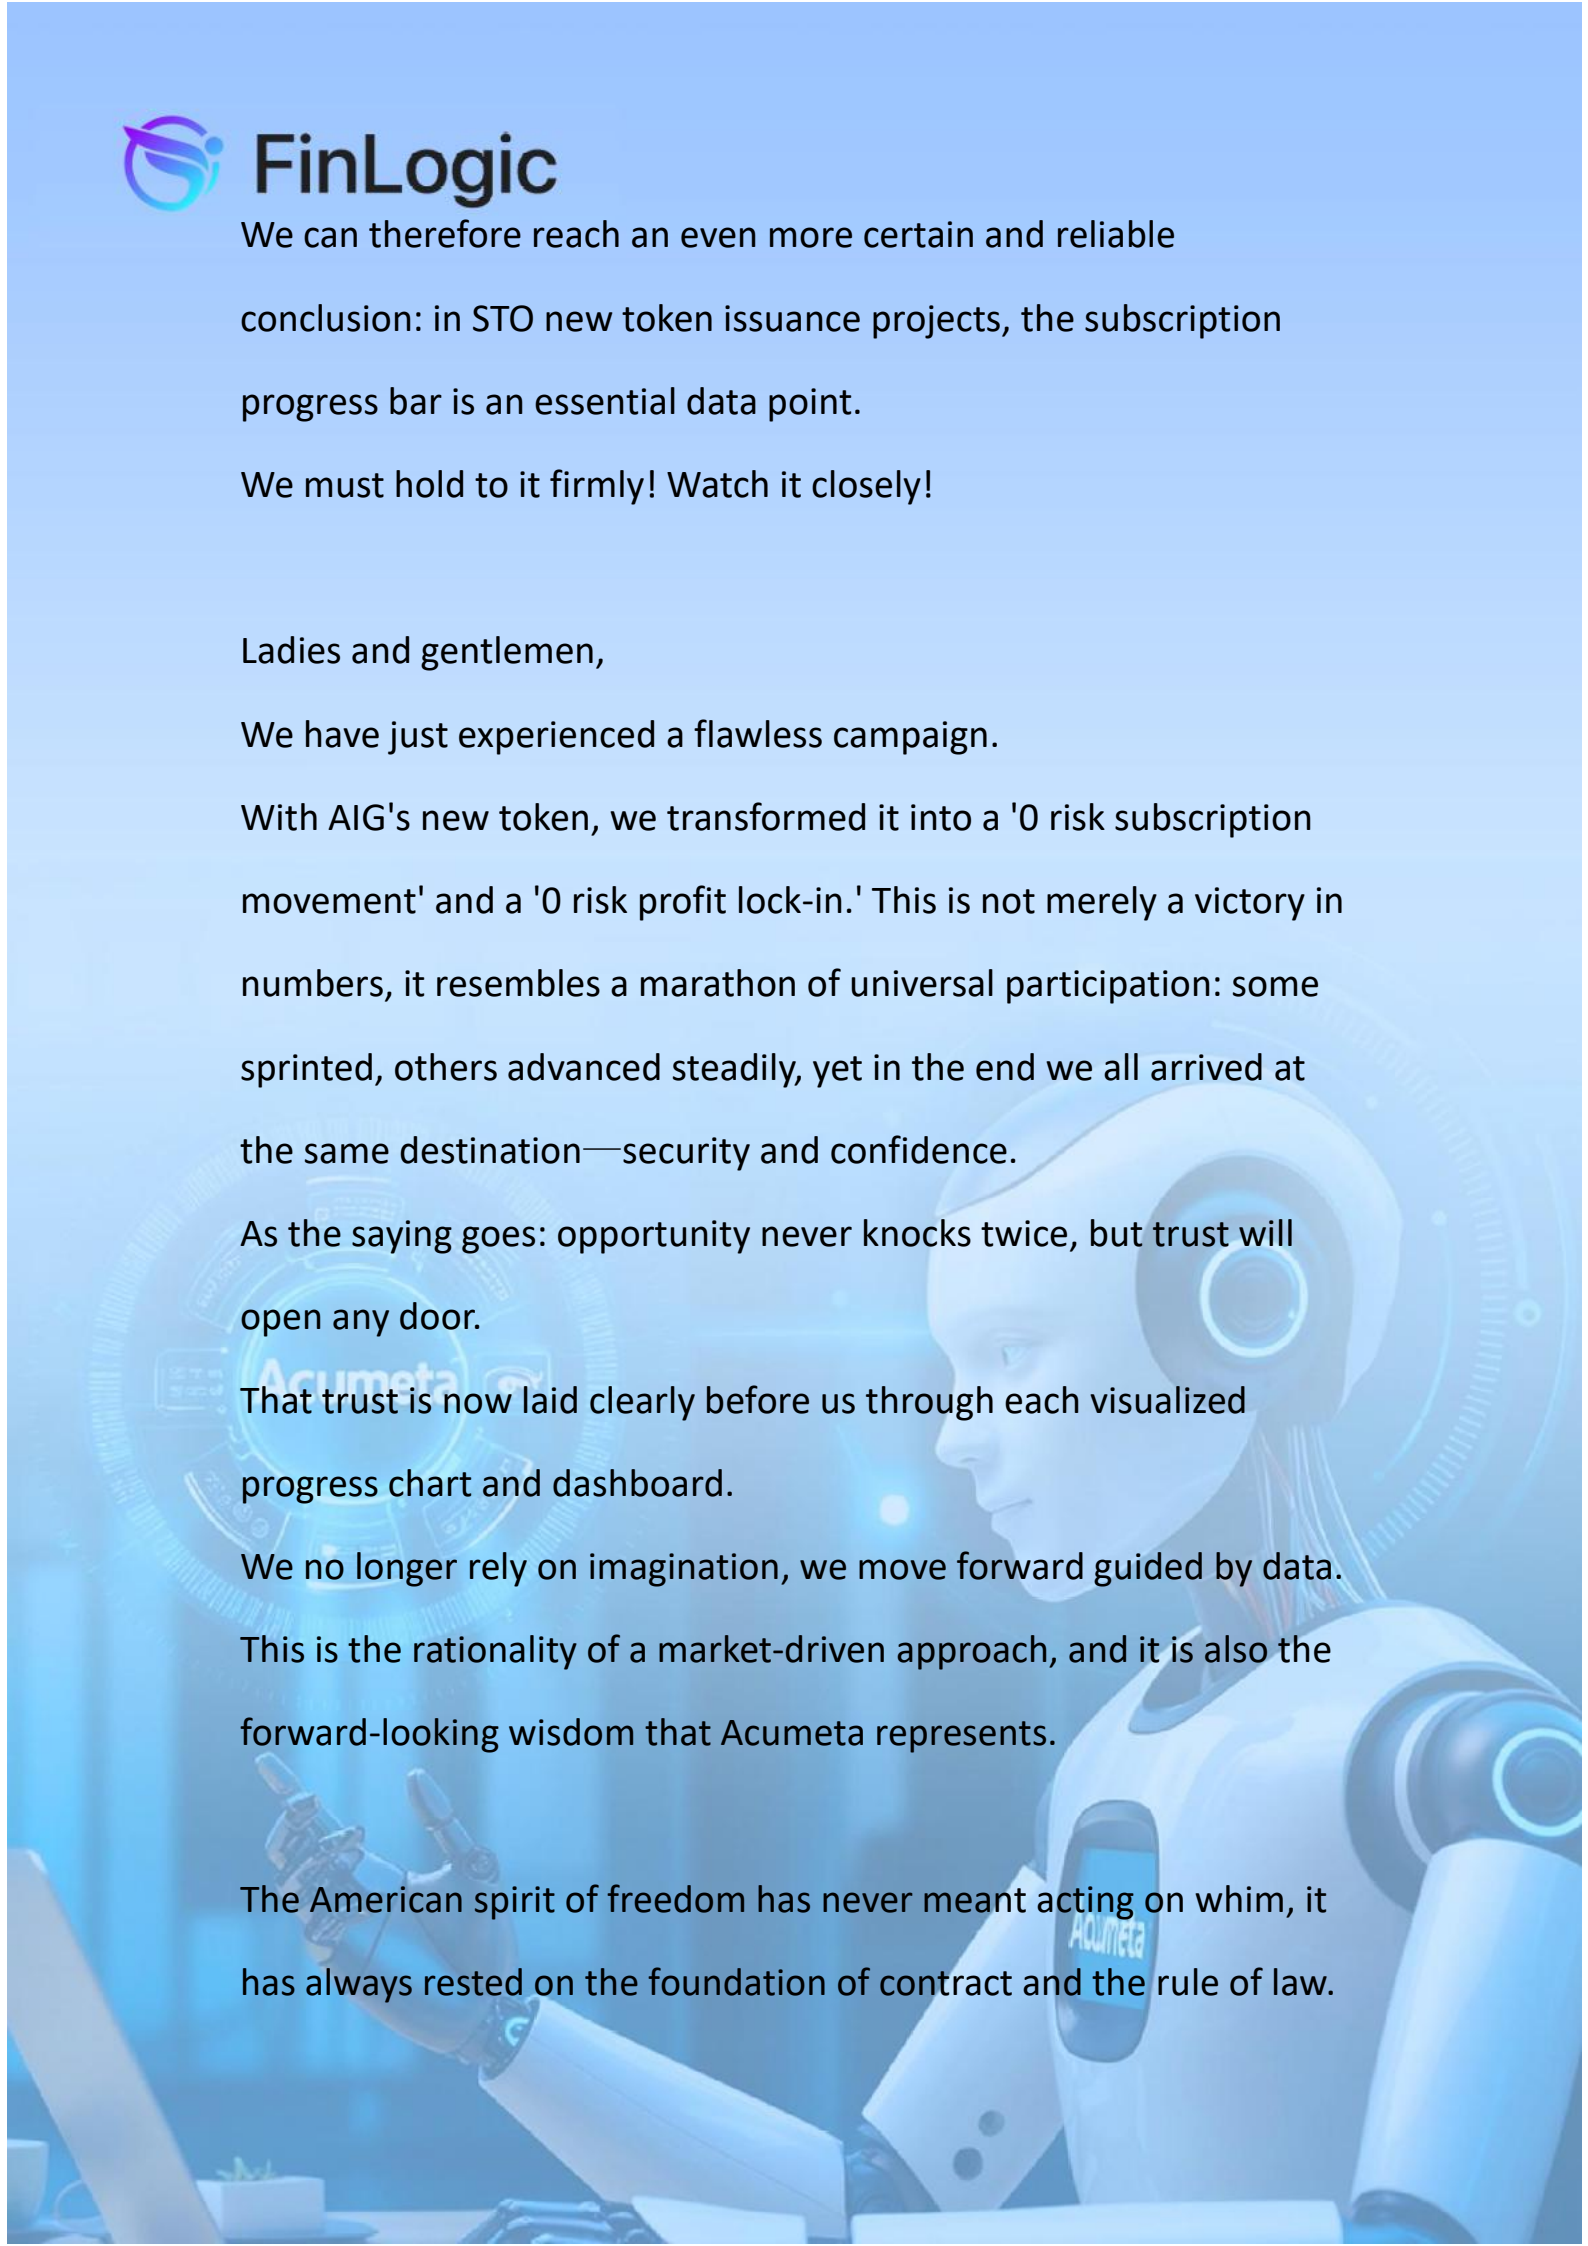

As the saying goes: opportunity never knocks twice, but trust will open any door.

That trust is now laid clearly before us through each visualized progress chart and dashboard.

We no longer rely on imagination, we move forward guided by data.

This is the rationality of a market-driven approach, and it is also the forward-looking wisdom that Acumeta represents.

The American spirit of freedom has never meant acting on whim, it has always rested on the foundation of contract and the rule of law.

Once a contract is signed, it must be honored; once a promise is given, it must be fulfilled. This fidelity to contract is the enduring moat of wealth.

You may earn your first fortune through ingenuity, but only with credibility can you preserve ten fortunes, a hundred fortunes—and carry wealth across cycle after cycle.

So when we repay this 800 USDC today, it is not merely a cold number, it is a gesture, a statement.

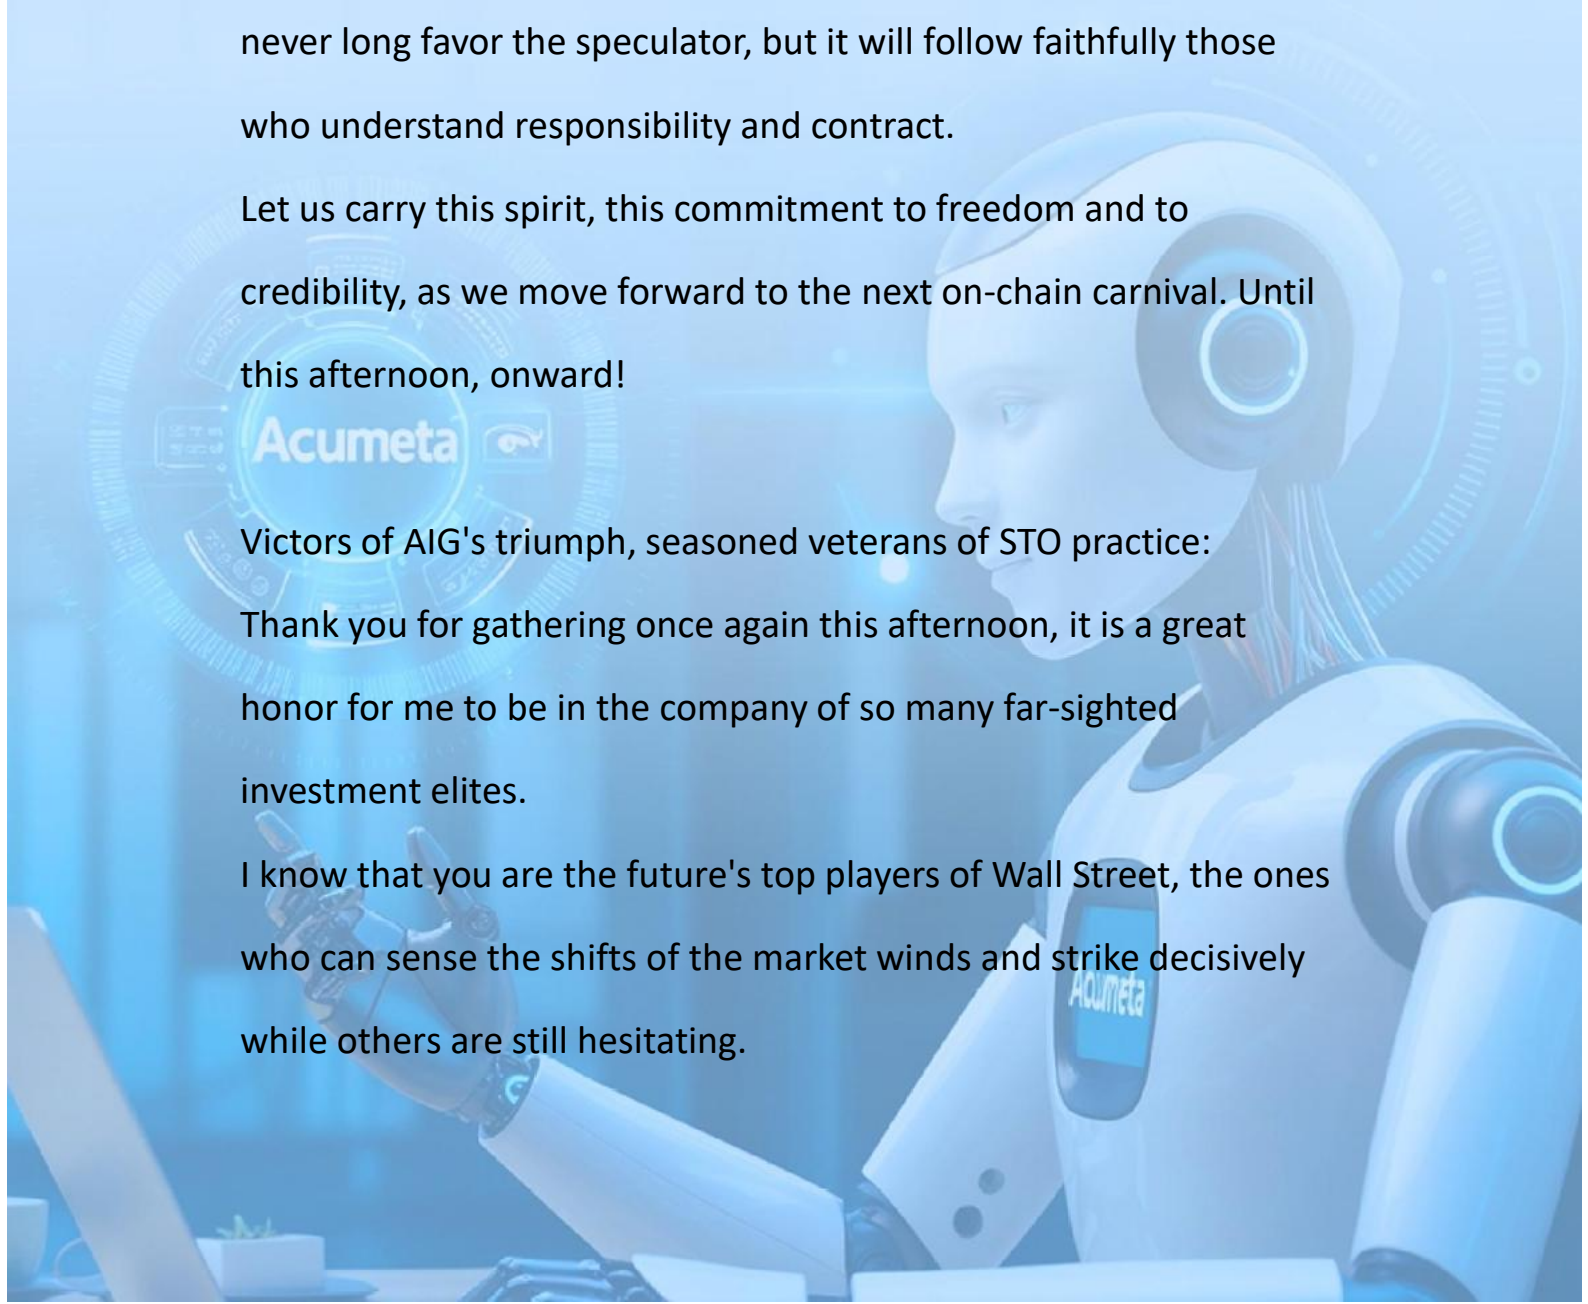

We must not only be winners, but trustworthy winners. Wealth will never long favor the speculator, but it will follow faithfully those who understand responsibility and contract.

Let us carry this spirit, this commitment to freedom and to credibility, as we move forward to the next on-chain carnival. Until this afternoon, onward!

Victors of AIG's triumph, seasoned veterans of STO practice:

Thank you for gathering once again this afternoon, it is a great honor for me to be in the company of so many far-sighted investment elites.

I know that you are the future's top players of Wall Street, the ones who can sense the shifts of the market winds and strike decisively while others are still hesitating.

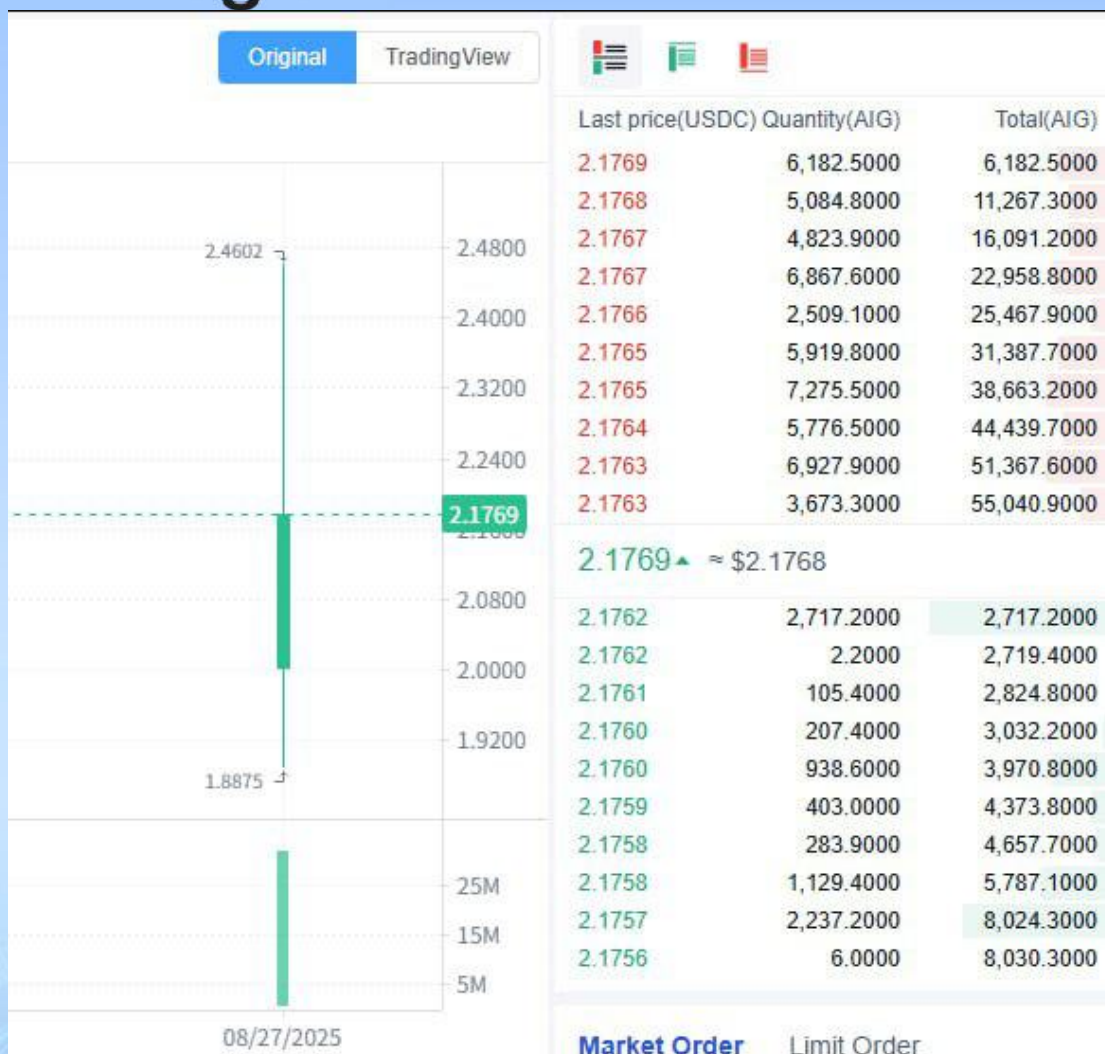

Your grasp of both risk and opportunity already surpasses that of ordinary investors. And today, we are here to discuss how, in the upcoming September rate-cut cycle, we may once again harness wisdom and courage to prevail in this grand campaign of wealth.

We have all seen that AIG's operation this time was nothing short of textbook perfection.

At the moment of its new token listing, market sentiment surged and the crowd cheered, but as it quietly began locking in profits, most were still lost in the euphoria of rising prices.

When the market's direction suddenly shifted and a wave of large AIG sell-offs emerged, we suddenly realized that locking in profits had foreseen everything

It reminds me of an old friend who always used to say: ‘On Wall Street, you must be like a skilled sniper—stay calm, wait for the perfect moment, then pull the trigger.'

AIG's maneuver this time is the best proof of that wisdom.

You are not a passive player carried along by the tide, you are a hunter who strikes proactively, securing your prize through precise

judgment and decisive action.

Thursday's on-chain carnival was a firework of wealth. What it illuminated was not only the numbers in our accounts, but also our conviction in the future. We are not merely chasing short-term gains, we are drawing from STO subscriptions a deeper lesson: wealth has never been a one-off trade, but a long-term contract, built and validated again and again.

I believe the power of the chain will make each of you here today pioneers on the track of wealth.

This is a moment to honor promises, and a moment to practice gratitude.

Whatever we may have gained from the AIG new token feast, even if only a few tokens, let us remember this: we seized the initiative,

and we locked in profits.

In a market full of uncertainty, initiative and profit are like two oars in a storm, steadying your small boat as it rows toward the shore.

But after celebrating victory, we still have one task to complete: the 800 USDC financing obtained by pledging FGT token must be repaid on time.

This is no small matter—it is the baseline of our credibility.

As we often say, ‘Credit is like teeth: once lost, it is hard to grow back.’ You may repair them, but the bite is never the same.

Why are U.S. Treasury bonds considered the world's ‘gold standard of credit’? Not because they never falter, but because commitments are kept.

No matter how fierce the storm, the government must honor payments on time. This principle is a foundation of the American republic, and it is why capital from around the world continues to seek our markets.

What kind of days have Americans lived through these past three years? We have lived through high-interest-rate days! Some joked that, at long last, our bank savings accounts started to ‘look useful’—like a gym membership card finally seeing a bit of action.

The interest from the bank could at least cover a burger and a Coke.

But here's the problem—when rates are high, loans get expensive, and mortgages and car payments weigh heavily. Many households found themselves trapped in this dilemma: savings earned a little interest, but the cost of living rose just as fast.

But now the winds have shifted. This September, a Federal Reserve rate cut is virtually certain. What does that mean? It means
‘money gets cheaper.’

Loan burdens will ease, and crypto will sprout like wild grass in spring. It is like the overture to financial freedom.

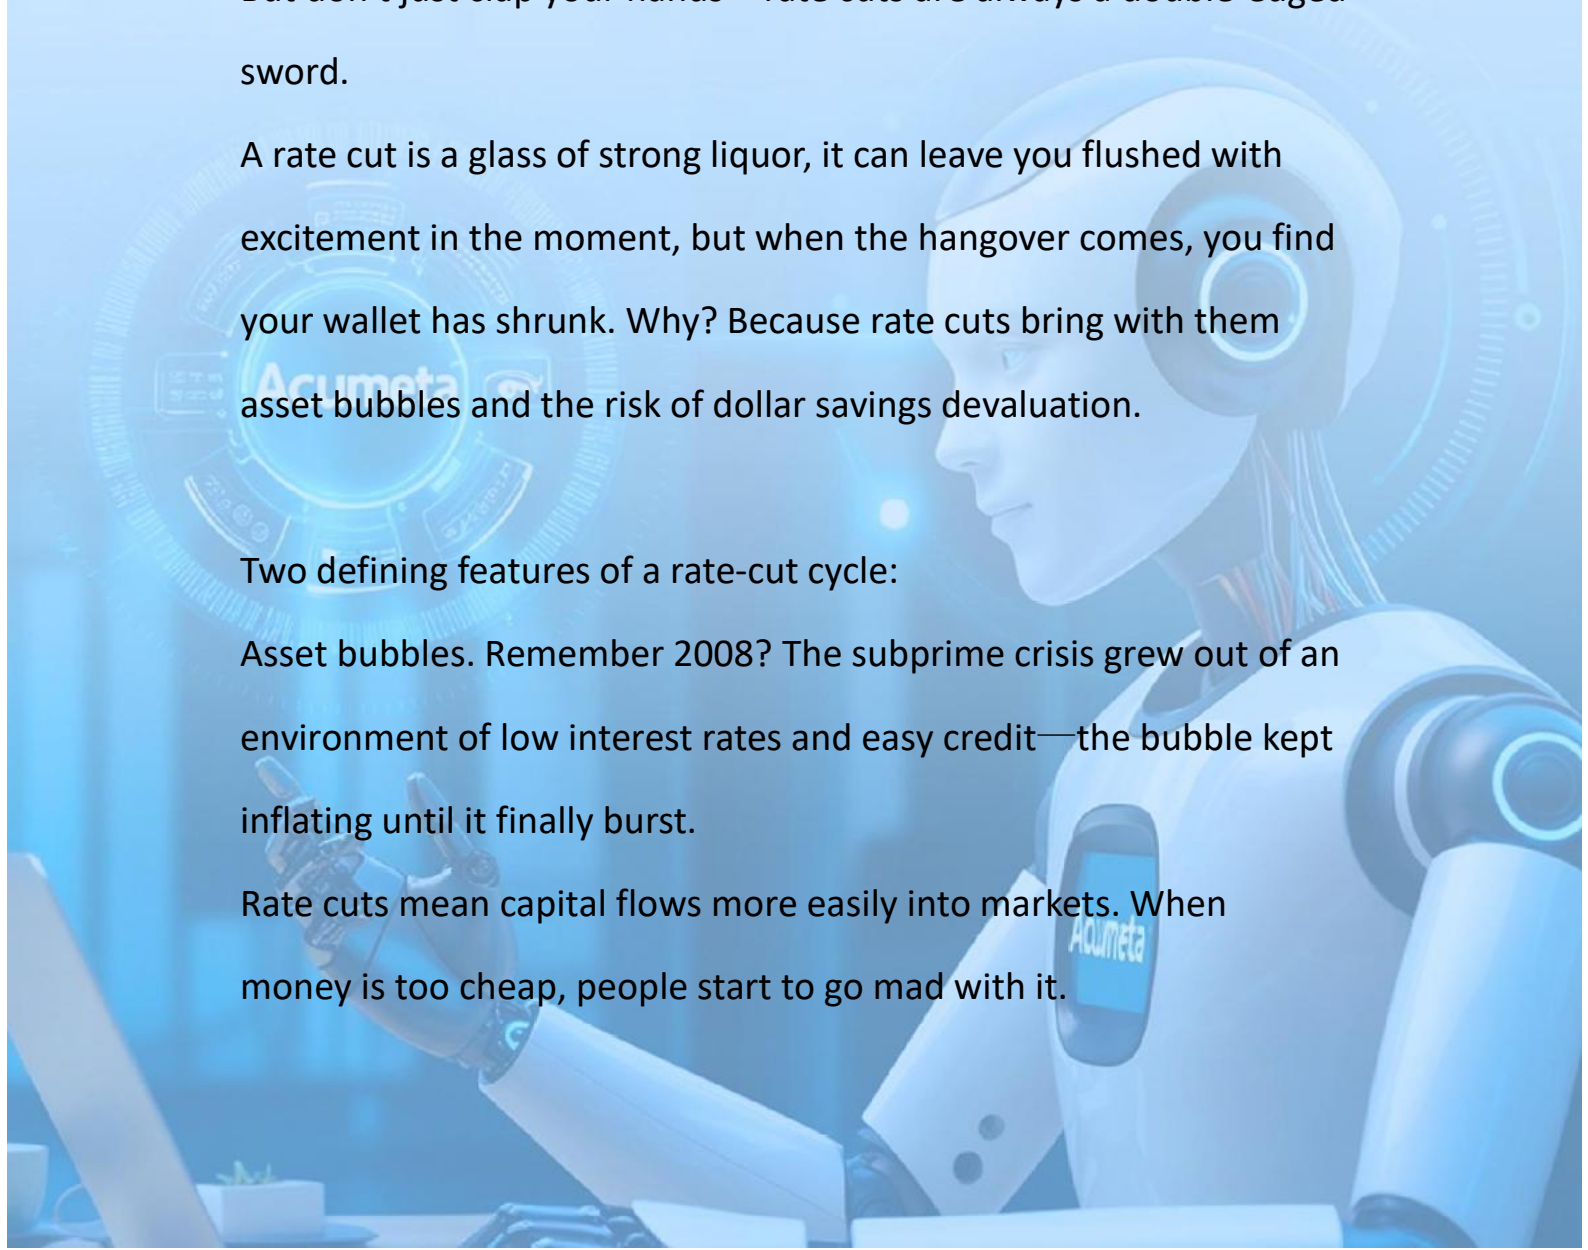

But don't just clap your hands—rate cuts are always a double-edged sword.

A rate cut is a glass of strong liquor, it can leave you flushed with excitement in the moment, but when the hangover comes, you find your wallet has shrunk. Why? Because rate cuts bring with them asset bubbles and the risk of dollar savings devaluation.

Two defining features of a rate-cut cycle:

Asset bubbles. Remember 2008? The subprime crisis grew out of an environment of low interest rates and easy credit—the bubble kept inflating until it finally burst.

Rate cuts mean capital flows more easily into markets. When money is too cheap, people start to go mad with it.

That is the breeding ground for bubbles. In the short term, you may make money, but once the bubble is pricked, what remains is nothing but wreckage.

Savings devaluation.

American household savings rates are not as high as those in many Asian countries, but in recent years, due to the pandemic and high interest rates, many people put their money into banks.

You may think it is safe, but in fact it is merely a slower form of devaluation.

Why? Because when interest rates fall, the real return on the dollar declines, while inflation still lurks, eroding purchasing power bit by bit.

For example, last year, \$100 might have bought you three big bags of groceries, this year, the same \$100 may only bring home two and a half. The number on the account is unchanged, but in reality it has shrunk.

A small story from real life.

A friend of mine in California, rather traditional in mindset, firmly believes that 'saving is safety.'

Over the past three years, he built up a sizable cash reserve, placing it in fixed deposits. Watching the interest accrue gave him a strong

sense of security.

But last month, when we went grocery shopping together for milk and eggs, he suddenly realized that the little bit of extra interest he earned could not even keep pace with rising prices. He gave a wry smile and said to me: ‘Brother, I'm saving money, but what I'm losing is purchasing power.'

This is the central paradox of a rate-cut cycle: the numbers in your bank account remain intact, yet your real standard of living quietly slips downward.

The Federal Reserve's rationale for cutting rates is to stimulate consumption and investment. When money becomes cheaper, businesses find financing easier, and ordinary households can borrow more easily to buy homes, cars, or simply spend on credit cards. The gears of the economy turn faster.

But never forget, the other side of stimulating the economy is eroding the return on savings.

It becomes a kind of ‘wealth transfer show': investors may laugh with gains, while pure savers become the ones footing the bill.

One cannot rely solely on savings. Asset allocation is essential. To avoid being eaten away by inflation, you must, during a rate-cut cycle, identify tools that resist inflation—and allocating to crypto assets is indispensable.

The relationship between rate cuts and the devaluation crisis of dollar savings.

It is as if our money, right before our eyes, quietly shrinks.

When the Federal Reserve cuts rates, deposit rates at banks fall as well.

This means that the money we worked so hard to earn, once placed in the bank, cannot effectively withstand inflation. Inflation becomes the thief in our purse, and a rate cut is like giving that thief a green light.

When a rate-cut cycle begins, inflationary pressure only intensifies.

The goods we buy and the services we pay for all rise in price. The savings in our bank accounts may not decline in number, but their purchasing power steadily erodes. This is the dollar savings devaluation crisis.

It is not a sudden event, but a slow and painful process.

This may mean we must reexamine our investment choices and increase our holdings in crypto. And among all areas of crypto, the most compelling today is the new token STO issuance projects. True wealth does not come from blindly following the market, but from deep insight into the future.

That is why I do not wish to dwell on those tired economic data points and market reports.

What I want to discuss with you is a 'great wealth transfer' that is unfolding before our eyes, though many have yet to see it clearly.

—Bitcoin and Ethereum. From the moment they were created, these assets were designed to be deflationary. Bitcoin has a fixed total supply of only 21 million, never to be increased. It is as though there were only 21 million diamonds on earth—each one rare and precious.

Ethereum, through the 'London Upgrade' and its EIP-1559 proposal, introduced a burn mechanism: the more the network is used, the more ETH is destroyed, meaning that its total supply can actually decrease.

In a rate-cut cycle, these become powerful weapons against inflation. As cheap capital floods the market, people seek assets that can preserve and grow in value, and scarce assets like Bitcoin

and Ethereum will become the natural choice.

With the approaching rate-cut cycle comes the dilution of monetary purchasing power. And it will show you, without mercy: the winners are those who dare to embrace on-chain assets; the losers are those still trapped in the 'illusion of safety' through savings.

They do not believe bank interest can change anything; instead, they believe in code, in the rules of the chain, and in scarcity. In other words, the scales of wealth are tilting across generations.

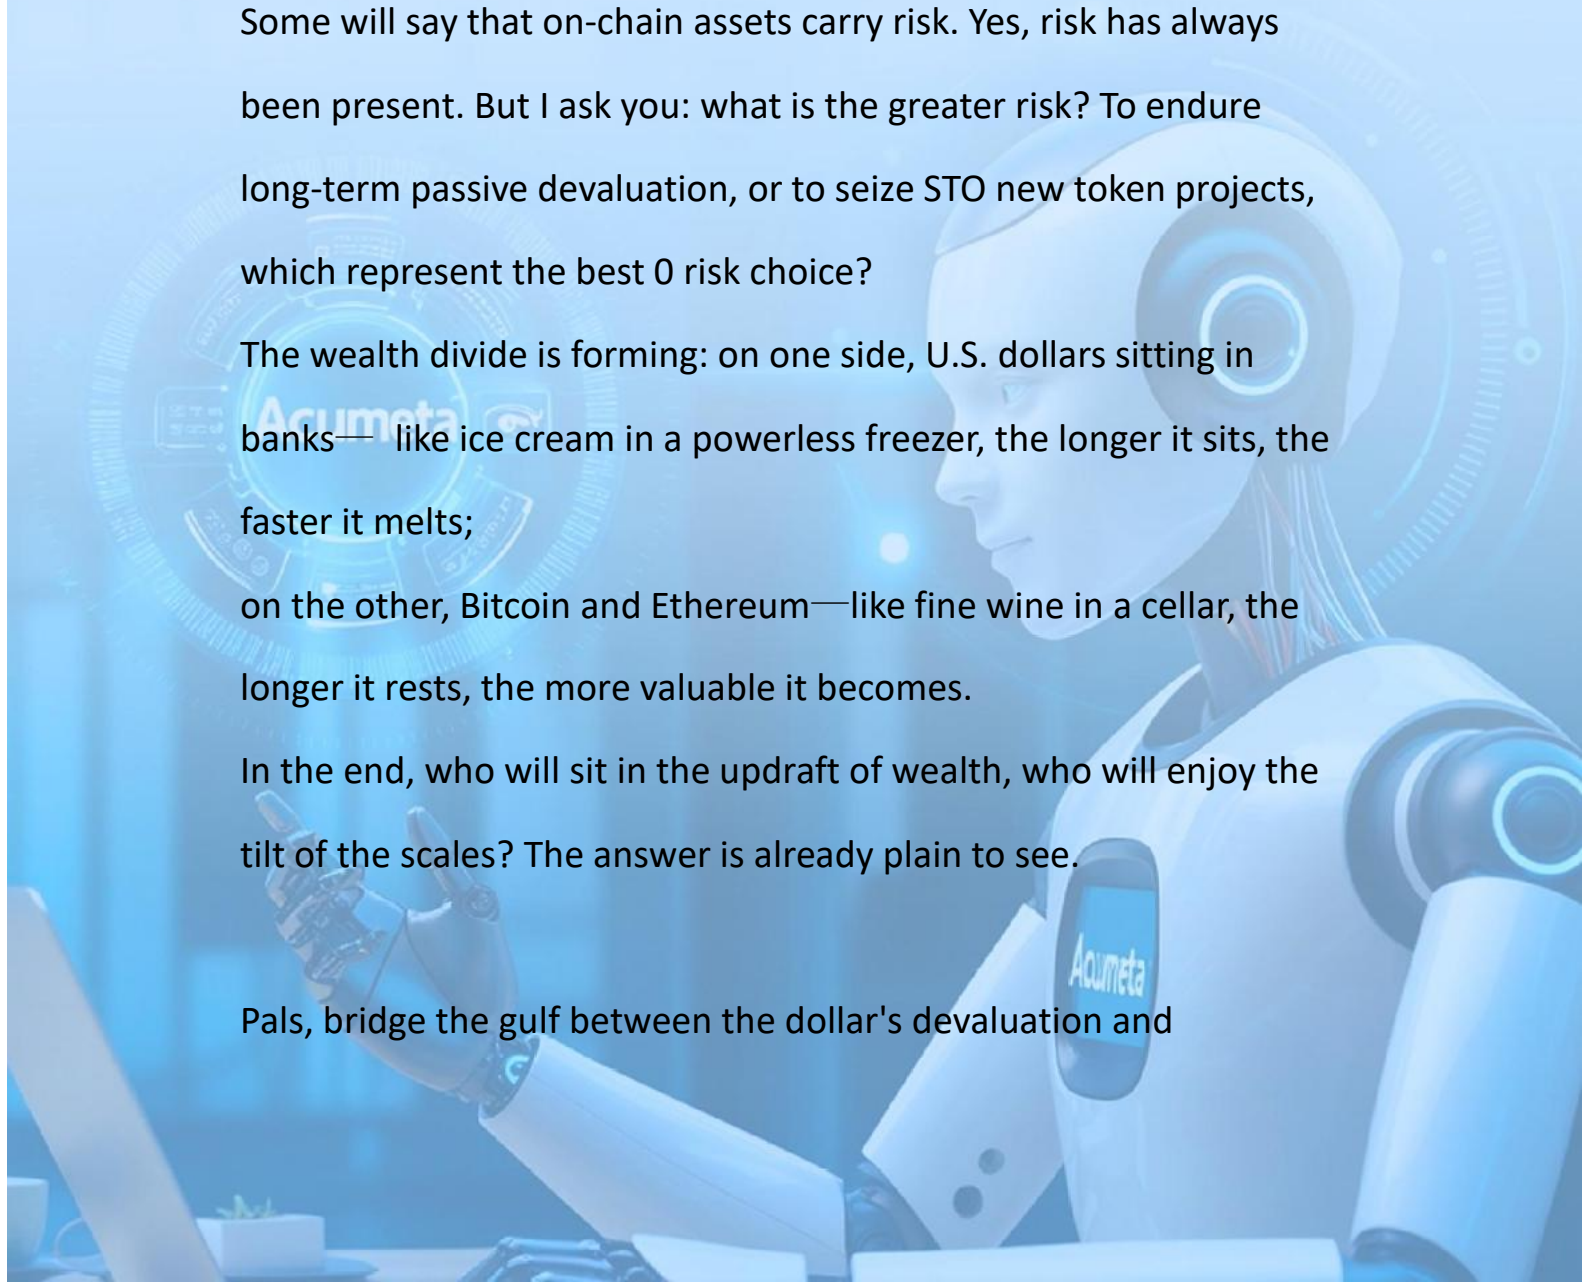

Some will say that on-chain assets carry risk. Yes, risk has always been present. But I ask you: what is the greater risk? To endure long-term passive devaluation, or to seize STO new token projects, which represent the best 0 risk choice?

The wealth divide is forming: on one side, U.S. dollars sitting in banks— like ice cream in a powerless freezer, the longer it sits, the faster it melts;

on the other, Bitcoin and Ethereum—like fine wine in a cellar, the longer it rests, the more valuable it becomes.

In the end, who will sit in the updraft of wealth, who will enjoy the tilt of the scales? The answer is already plain to see.

Pals, bridge the gulf between the dollar's devaluation and

purchasing power erosion brought by rate cuts, and the appreciation of on-chain wealth.

The scales of fortune are tilting toward you!

The crypto world is no longer an unfamiliar place for investment.

We have seen support from Congress through the three major crypto bills, and pro-crypto statements and actions from the Trump administration's cabinet. Together, they confirm that the government now leading America is building a crypto capital—ushering in a flourishing era of on-chain assets.

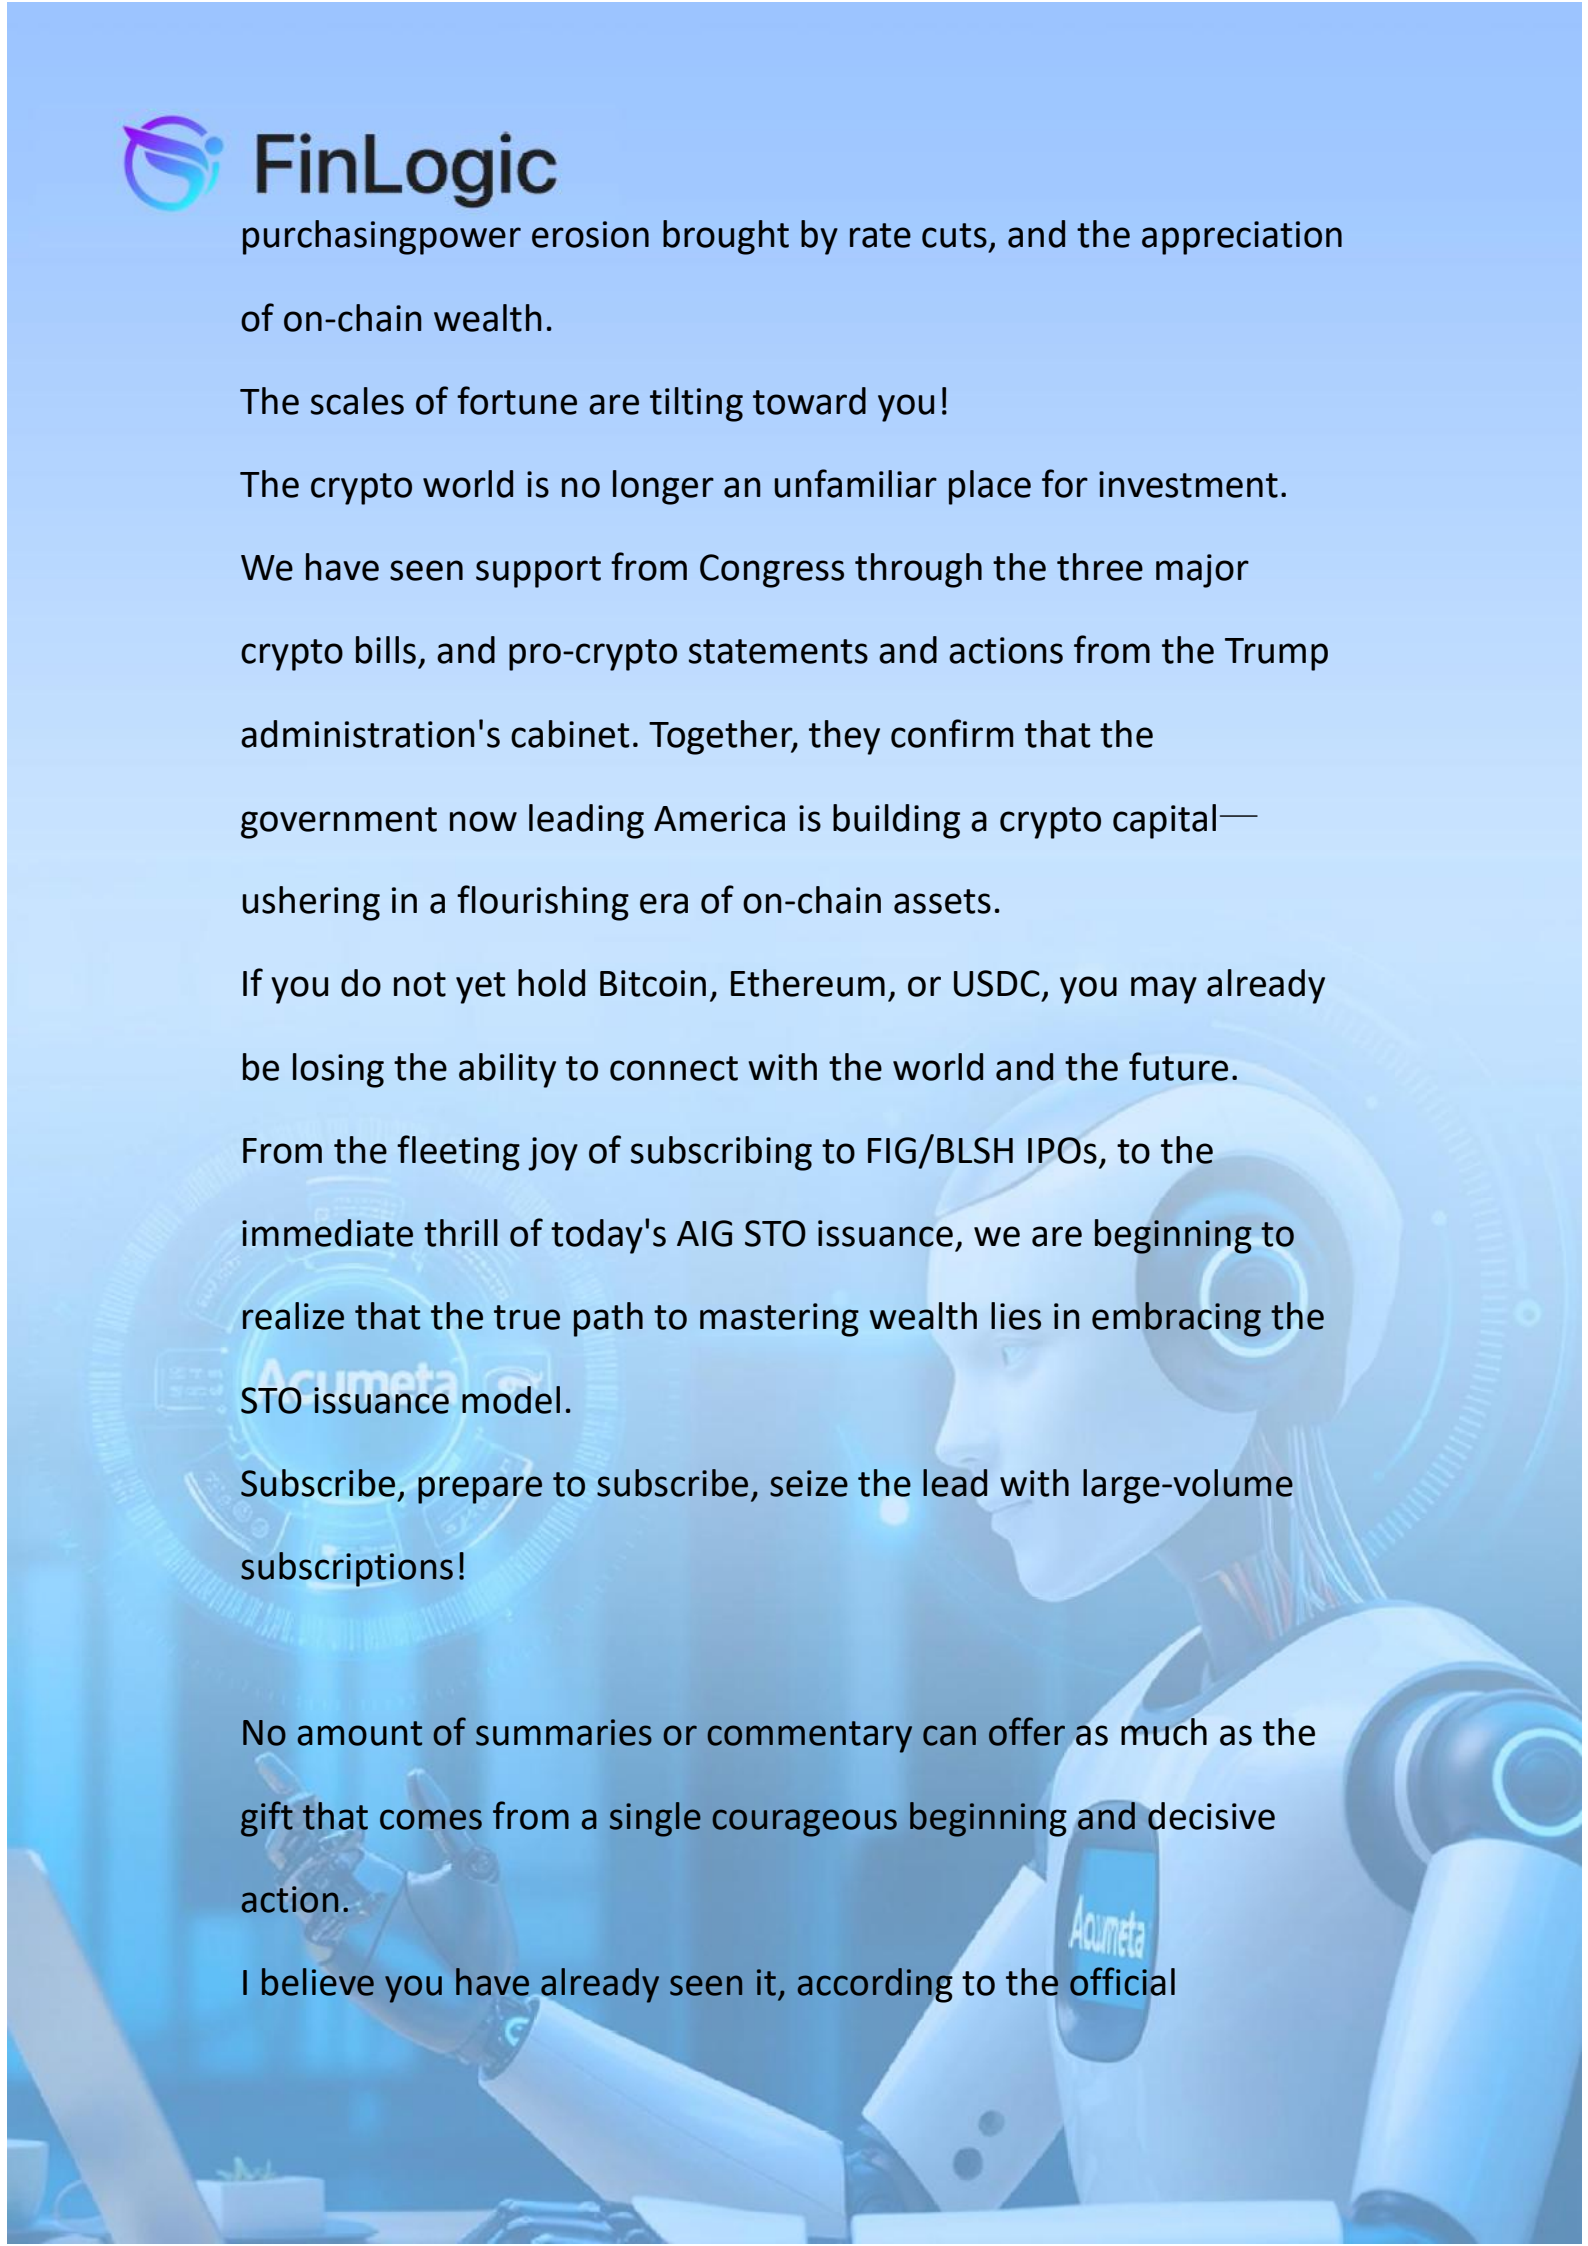

If you do not yet hold Bitcoin, Ethereum, or USDC, you may already be losing the ability to connect with the world and the future.

From the fleeting joy of subscribing to FIG/BLSH IPOs, to the immediate thrill of today's AIG STO issuance, we are beginning to realize that the true path to mastering wealth lies in embracing the STO issuance model.

Subscribe, prepare to subscribe, seize the lead with large-volume subscriptions!

No amount of summaries or commentary can offer as much as the gift that comes from a single courageous beginning and decisive action.

I believe you have already seen it, according to the official

announcement from ETHERMAC crypto trading center, the next new token STO project has entered the [subscription preparation stage].

The pre-issuance information disclosed in the announcement is attracting unprecedented enthusiasm and attention.

Does this focus suggest that the upcoming STO issuance project carries the hallmarks of a high-quality venture?

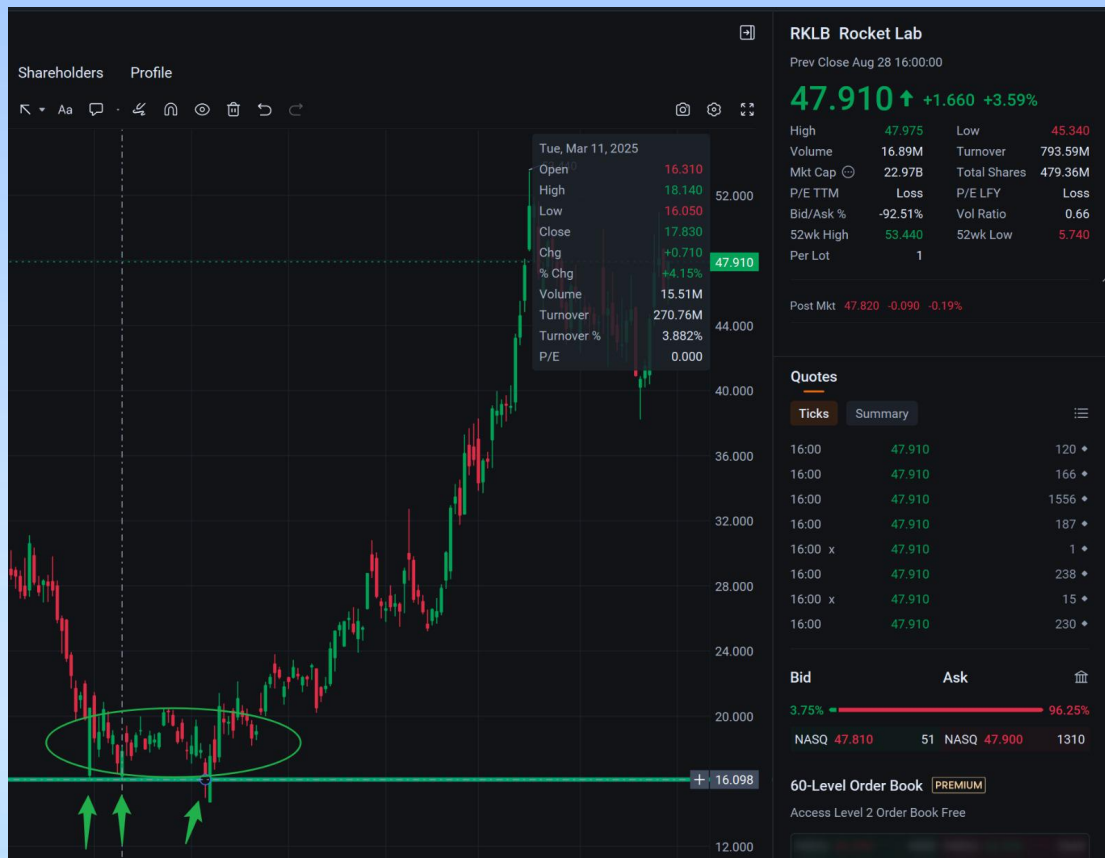

Looking back on our experience with the AIG new token issuance, what are the core factors that define a strong project?

1. Alignment with national development policies and receipt of policy support.
2. Clear market-driven application prospects and demand.
3. Celebrity effect and a pragmatic, real-world character.
4. Industry valuation overlapping with real-world cases.
5. Comparable cases in the stock market that can guide valuation expectations.
6. The pull of other markets, especially the on-chain asset boom around RWA.

Taken together, these elements help us evaluate the cost advantage and quality of a new STO issuance project.

As of today, we cannot yet obtain a definitive answer.

If you are interested in this project, please contact the official customer service manager to obtain the relevant white paper and

Today I took some time to conduct a preliminary review of the [White Paper] for this new token STO issuance project and obtained certain key insights.

I also commissioned Acumeta to prepare a complete analysis and roadmap, which I will share on my program this Friday. Will you be tuning in to watch?

For now, I want to begin with a simple contextual reading, examining the stock case behind this BOM new token STO issuance project and discussing its value.

In the U.S. equity market there are many stocks tied to related concepts. One example I want to highlight is \$RKLB.

As a rocket laboratory company engaged in space exploration, rocket and spacecraft construction, and the provision of launch-platform management services, it has laid a solid foundation for commercial access to space.

As the chart shows, since April of this year the stock has risen from \$15 to today's \$48—an increase of more than 300%.

All within less than half a year, what does this tell us?

It shows that the aerospace industry, America's space program, is winning the favor of Wall Street capital.

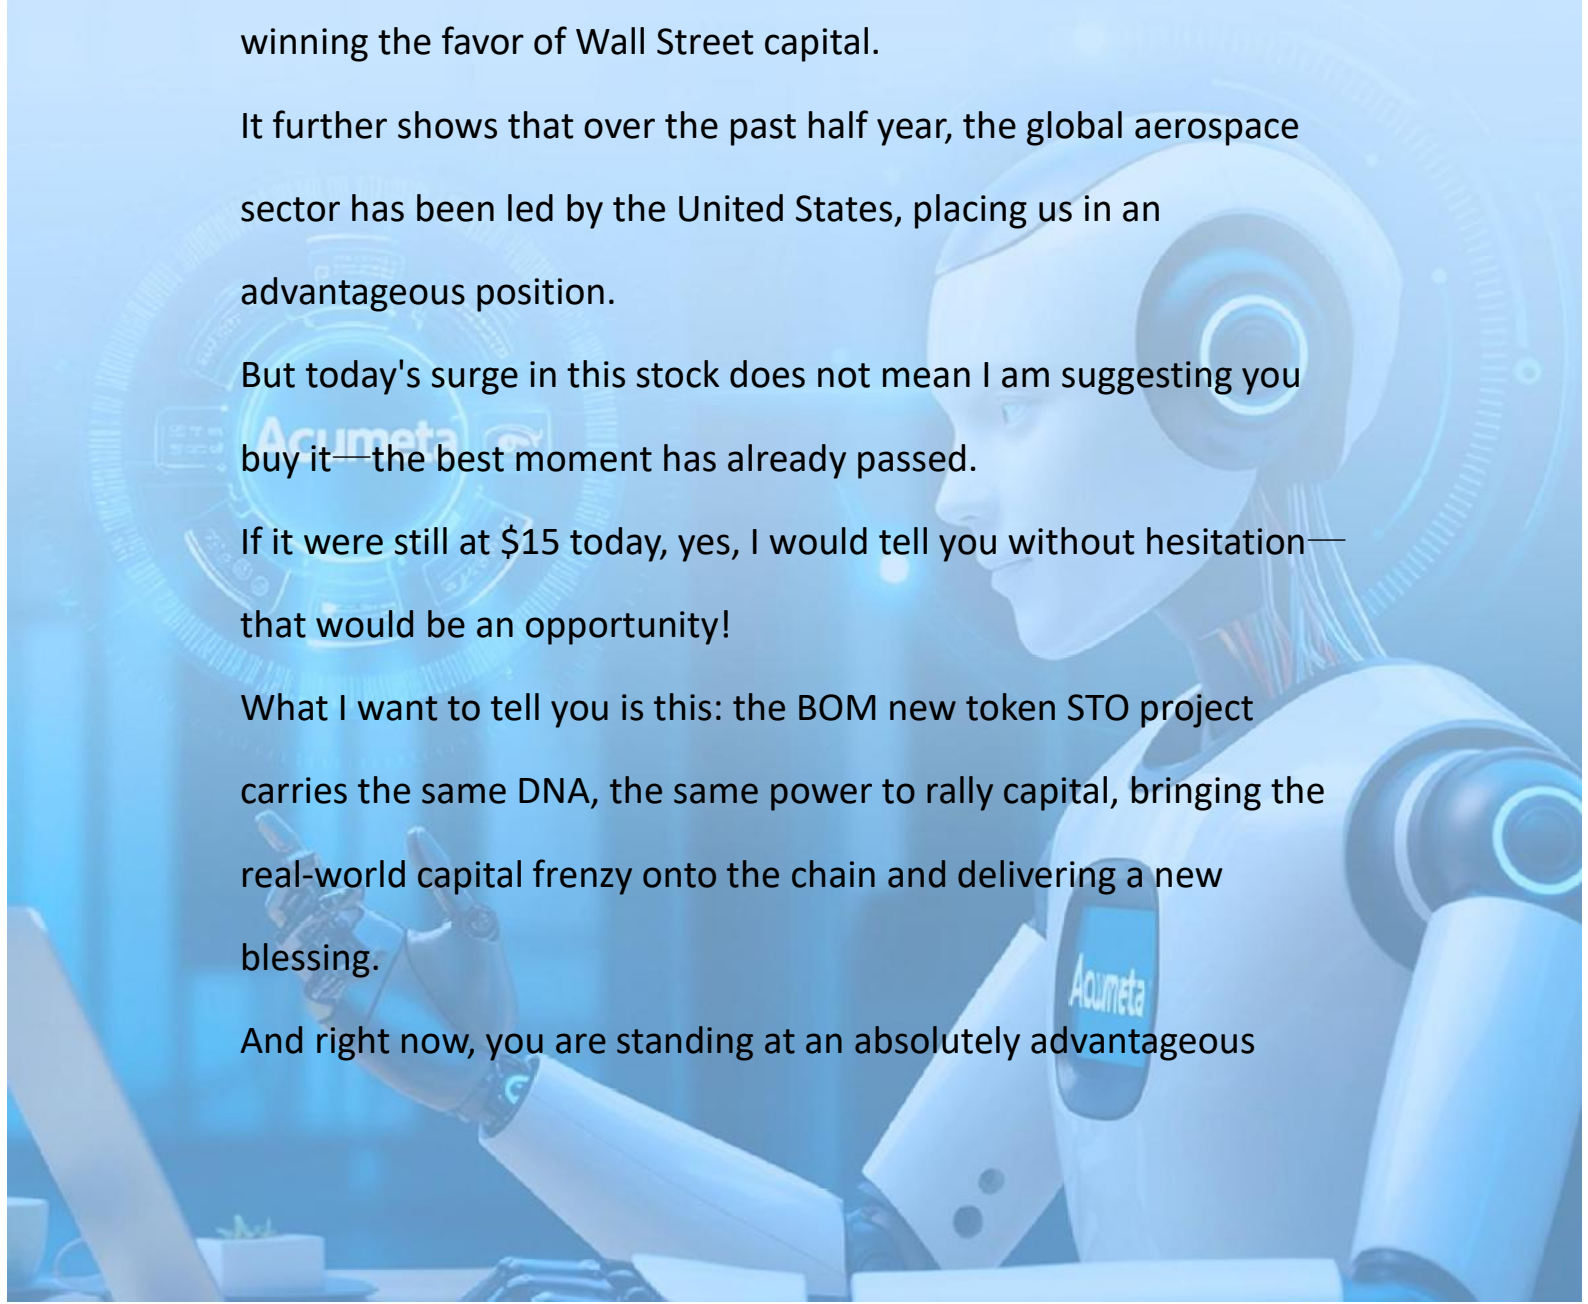

It further shows that over the past half year, the global aerospace sector has been led by the United States, placing us in an advantageous position.

But today's surge in this stock does not mean I am suggesting you buy it—the best moment has already passed.

If it were still at \$15 today, yes, I would tell you without hesitation—that would be an opportunity!

What I want to tell you is this: the BOM new token STO project carries the same DNA, the same power to rally capital, bringing the real-world capital frenzy onto the chain and delivering a new blessing.

And right now, you are standing at an absolutely advantageous

FinLogic

position, far below the \$15 mark of \$RKLB. You do not need to look up to any better choice—before you lies the best choice already. Do you understand?

And now, look—who is lending their backing and rallying support for the BOM new token STO project?

It is Trump, the president elected by the American people, who two weeks ago signed an important executive order calling for the easing of regulations on the aerospace industry. The goal is to foster a competitive commercial space sector and to ensure that the United States retains its leadership in this field.

The executive order calls for the elimination or acceleration of environmental reviews required for vehicle launches and reentries, while also reviewing regulatory requirements to revise or repeal

FinLogic

outdated rules in this area. It establishes a new approval process for emerging space activities, strengthening America's competitiveness and advantage in the space industry.

Elon Musk's SpaceX will be the greatest beneficiary of this order, as the company is developing its experimental Starship rocket program for a series of future missions.

Indeed, just two days ago, Starship's 10th test flight succeeded, marking yet another leap forward in humanity's commercial journey into space.

So Musk has his 'Starship Project', but we have the BOM new token STO issuance project. We, too, are beneficiaries, will you let this opportunity pass you by?

A space journey into the new world of crypto.

You all know I never deal in illusions. From the AIG positioning to

Thursday's on-chain frenzy, we have together witnessed more than a few miracles. We locked in profits with precision, striking decisively while others still hesitated. That is the strength of our Quantitative Think Tank.

And this is only the beginning, just a warm-up. Tomorrow, Friday, I will share with all members my exclusive insights on the BOM new token STO issuance project. This is not merely an investment tip, it is a ticket to a new world.

I dare say this will be the most extraordinary investment opportunity you will hear of this year.

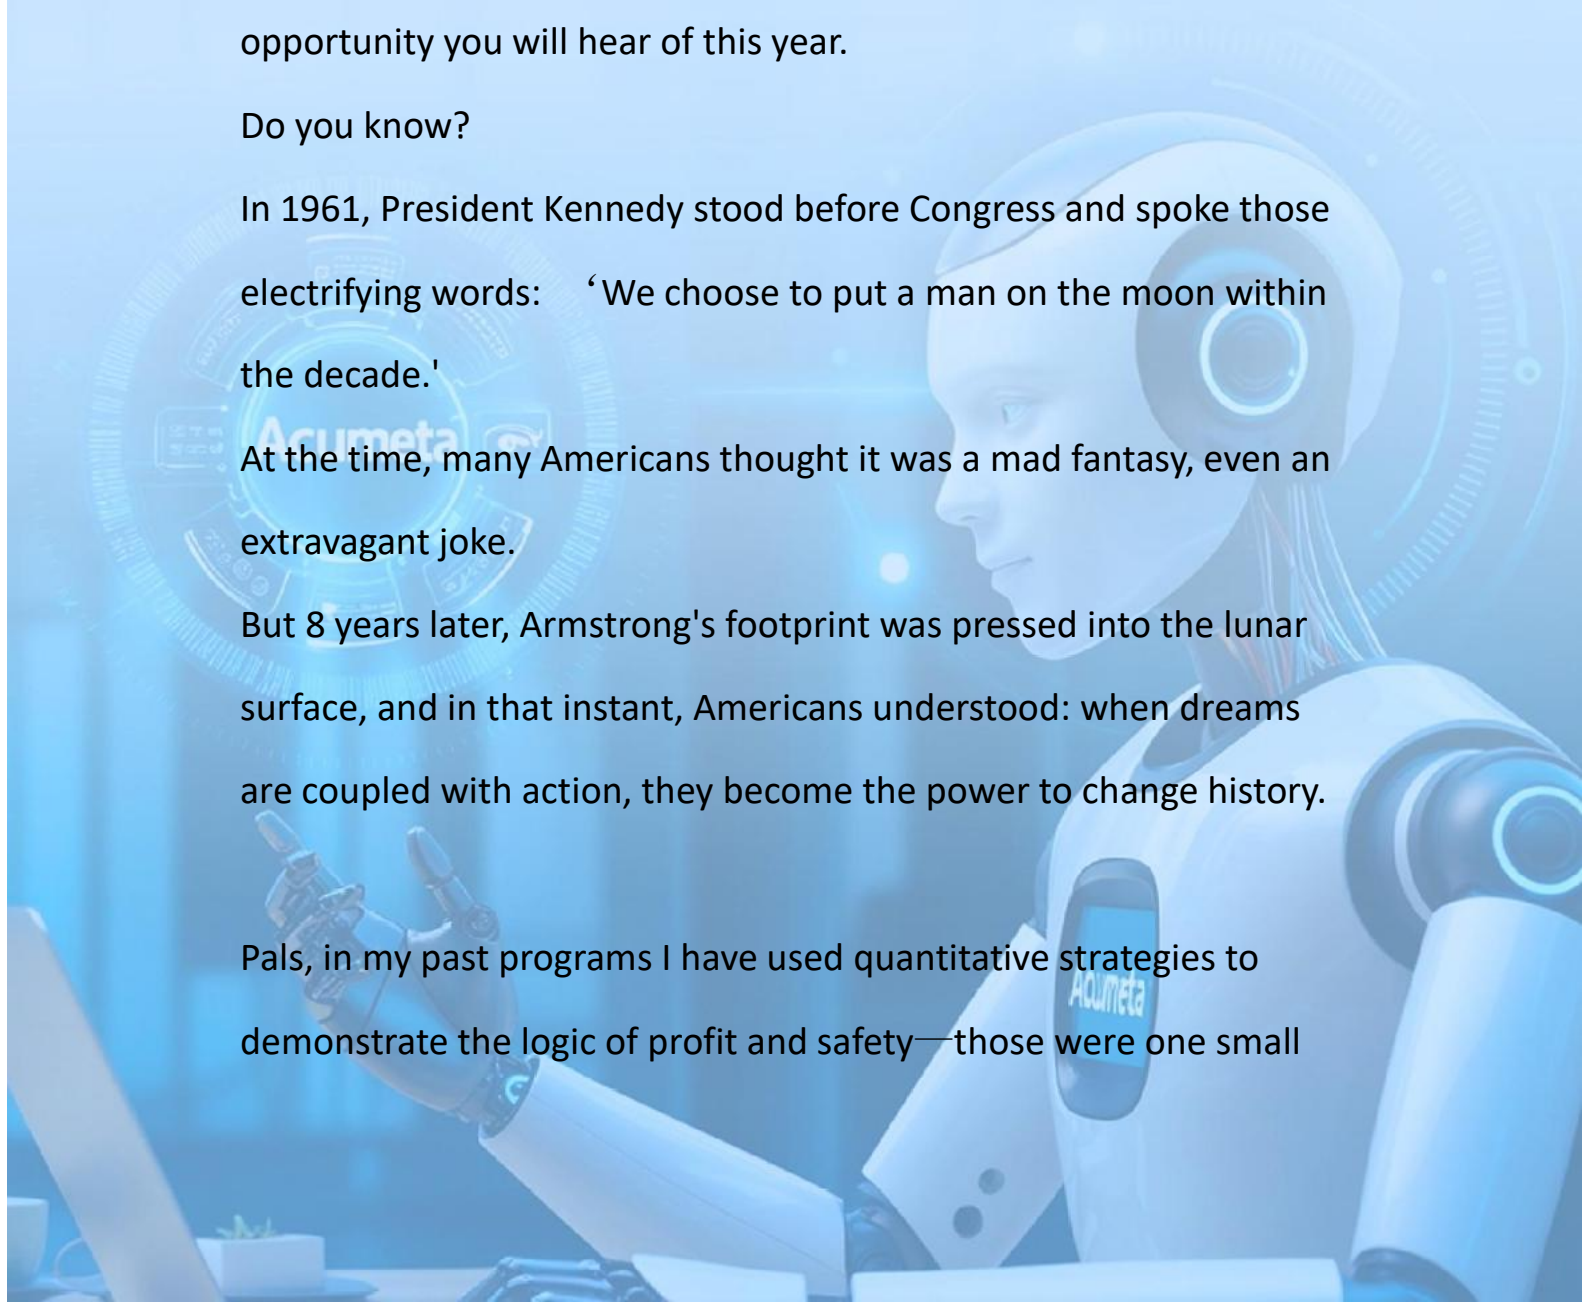

Do you know?

In 1961, President Kennedy stood before Congress and spoke those electrifying words: 'We choose to put a man on the moon within the decade.'

At the time, many Americans thought it was a mad fantasy, even an extravagant joke.

But 8 years later, Armstrong's footprint was pressed into the lunar surface, and in that instant, Americans understood: when dreams are coupled with action, they become the power to change history.

Pals, in my past programs I have used quantitative strategies to demonstrate the logic of profit and safety—those were one small

victory after another.

But today, let me be clear: small victories do not satisfy me, nor should they satisfy you.

For great investors do not seek just pocket money; they build bridges through which wealth can be passed from generation to generation.

After enjoying my programs, after seeing profits validated and horizons broadened, are you willing to join me, together with my Quantitative Think Tank Center, on a deeper path of collaboration? Not a passing impulse, but a long-term partnership.

The on-chain world is turning what once seemed unreachable dreams into realities within our grasp.

America's return to the moon plan will be realized next year, and the manned mission to Mars will be carried out by 'Starship.' And we, as leaders in the on-chain world, must also prepare our groundwork in advance.

The BOM project is our most important 'Starship' right now. We must establish a superior Early-Bird Subscription Plan.

This is not merely to seize the initiative, but to declare to the world that we are the leaders of this new financial revolution.

When we meet again on Friday, tune in to my program and open the exciting on-chain story of the aerospace frontier!
