Pals, participants in the BOM Early Bird Subscription Plan:

Monday's traditional holiday, Labor Day, is not only a moment for family gatherings, not only about barbecues, lakeside afternoons, beer, and American football. It also reminds us that the wealth and value of this nation have always come from those who give continuously—from the persistence of labor and the courage of creation.

For those of us fighting in the capital markets, the holiday carries another lesson: when others relax, opportunities often appear quietly.

A market closure means no movement in equities, but it does not

mean the stage of wealth comes to a halt.

On the contrary, the 24/7 crypto market, never closing for holidays, can, in such special time windows, deliver profits we might least expect.

This week's non-farm payroll data is, without question, the weathervane for the Federal Reserve's rate-cut expectations.

We've seen it before, when employment data comes in unexpectedly strong, the market immediately fears that rate cuts will be delayed; but when the data falls short of expectations, capital markets begin positioning early, betting on Fed easing.

Do you remember last September? The violent swings in the crypto market served as a wake up call.

Many couldn't withstand the shock of short-term declines and exited in haste—only to watch as the real trend quietly unfolded around the Fed's signal of policy easing.

In other words, those who jumped out too early not only missed the profits, but handed the opportunity over to more patient rivals.

My friends, volatility is not the enemy—fear is.

In this kind of volatility, there are two kinds of people: those who are afraid and get thrown off the ride; and those who embrace the swings, like surfers riding the crest of the wave, enjoying the profits

it brings.

Currency surfing is, without doubt, the most valuable strategy for us this weekend and Monday.

The screenshot shows the 'Upcoming' tab of the FinLogic interface. It displays a table with columns for Name, Start time, Closing time, and Schedule. The table lists the BOM / USDC token subscription, which starts on 09/02/2025 at 10:00:00 AM ET and ends on 09/10/2025 at 12:00:00 PM ET. The schedule is currently at 0.00%. There are green arrows pointing to the 'Upcoming' tab and the 'BOM / USDC' entry.

Name	Start time	Closing time	Schedule
BOM / USDC	09/02/2025 10:00:00 AM ET	09/10/2025 12:00:00 PM ET	0.00 %

More importantly, I have news to quicken the pulse: after the holiday, on Tuesday, BOM's new token subscription week officially begins.

This is not merely a trade, it is more like an entirely new track—a feast of asset allocation.

We saw the market's fervor with AIG; this time, the story, runway, and potential behind BOM are destined to draw even greater attention.

I'd like to frame our thinking with three keywords:

Holiday insight: let the holiday be more than rest—treat it as a window for finding value.

NFP signal: it shapes more than the dollar and rates, it is already etching the path of crypto.

BOM's opportunity: more compelling than the holiday itself is its

potential for wealth compounding.

We will unpack, step by step, why, at moments like this, staying sharp and executing marks the clearest dividing line between high-net-worth investors and the ordinary crowd.

This is not just another ordinary market fluctuation, it is an unprecedented super cycle of wealth revaluation and allocation. Well, I use the word 'super' deliberately, because if you truly compare with history, you will find that what is unfolding now is almost a replay of last September.

Let's travel back to early September 2024. The market then was like someone who had just downed three shots of espresso—the heartbeat was racing.

Bitcoin's price was whipping up and down; many watched it slide from 64k to 52k and muttered to themselves: Is this about to soar to the skies, or collapse off a cliff?

Unfortunately, most were spooked by the short-term drop right in front of them. Believing a storm was imminent, they jumped off in panic—only to miss the real breakout.

Buddy, don't forget, this is the crypto market, not a pension fund. Volatility is not the enemy, it is the bridge to opportunity.

When the Fed's rate cut decision hit, the market ignited like a rocket launch, with Bitcoin putting on a dazzling fireworks display of

wealth.

And in that instant, it became clear: patience and foresight are the market's ultimate trump cards.

Friends, this is what I want to stress—September 2024 already gave us a clear rehearsal.

**\*\***On the eve of a rate cut, the market is often full of volatility and uncertainty;

**\*\***Many, out of fear or shortsightedness, exit too early;

**\***But the real breakout arrives only after the rate cut is delivered.

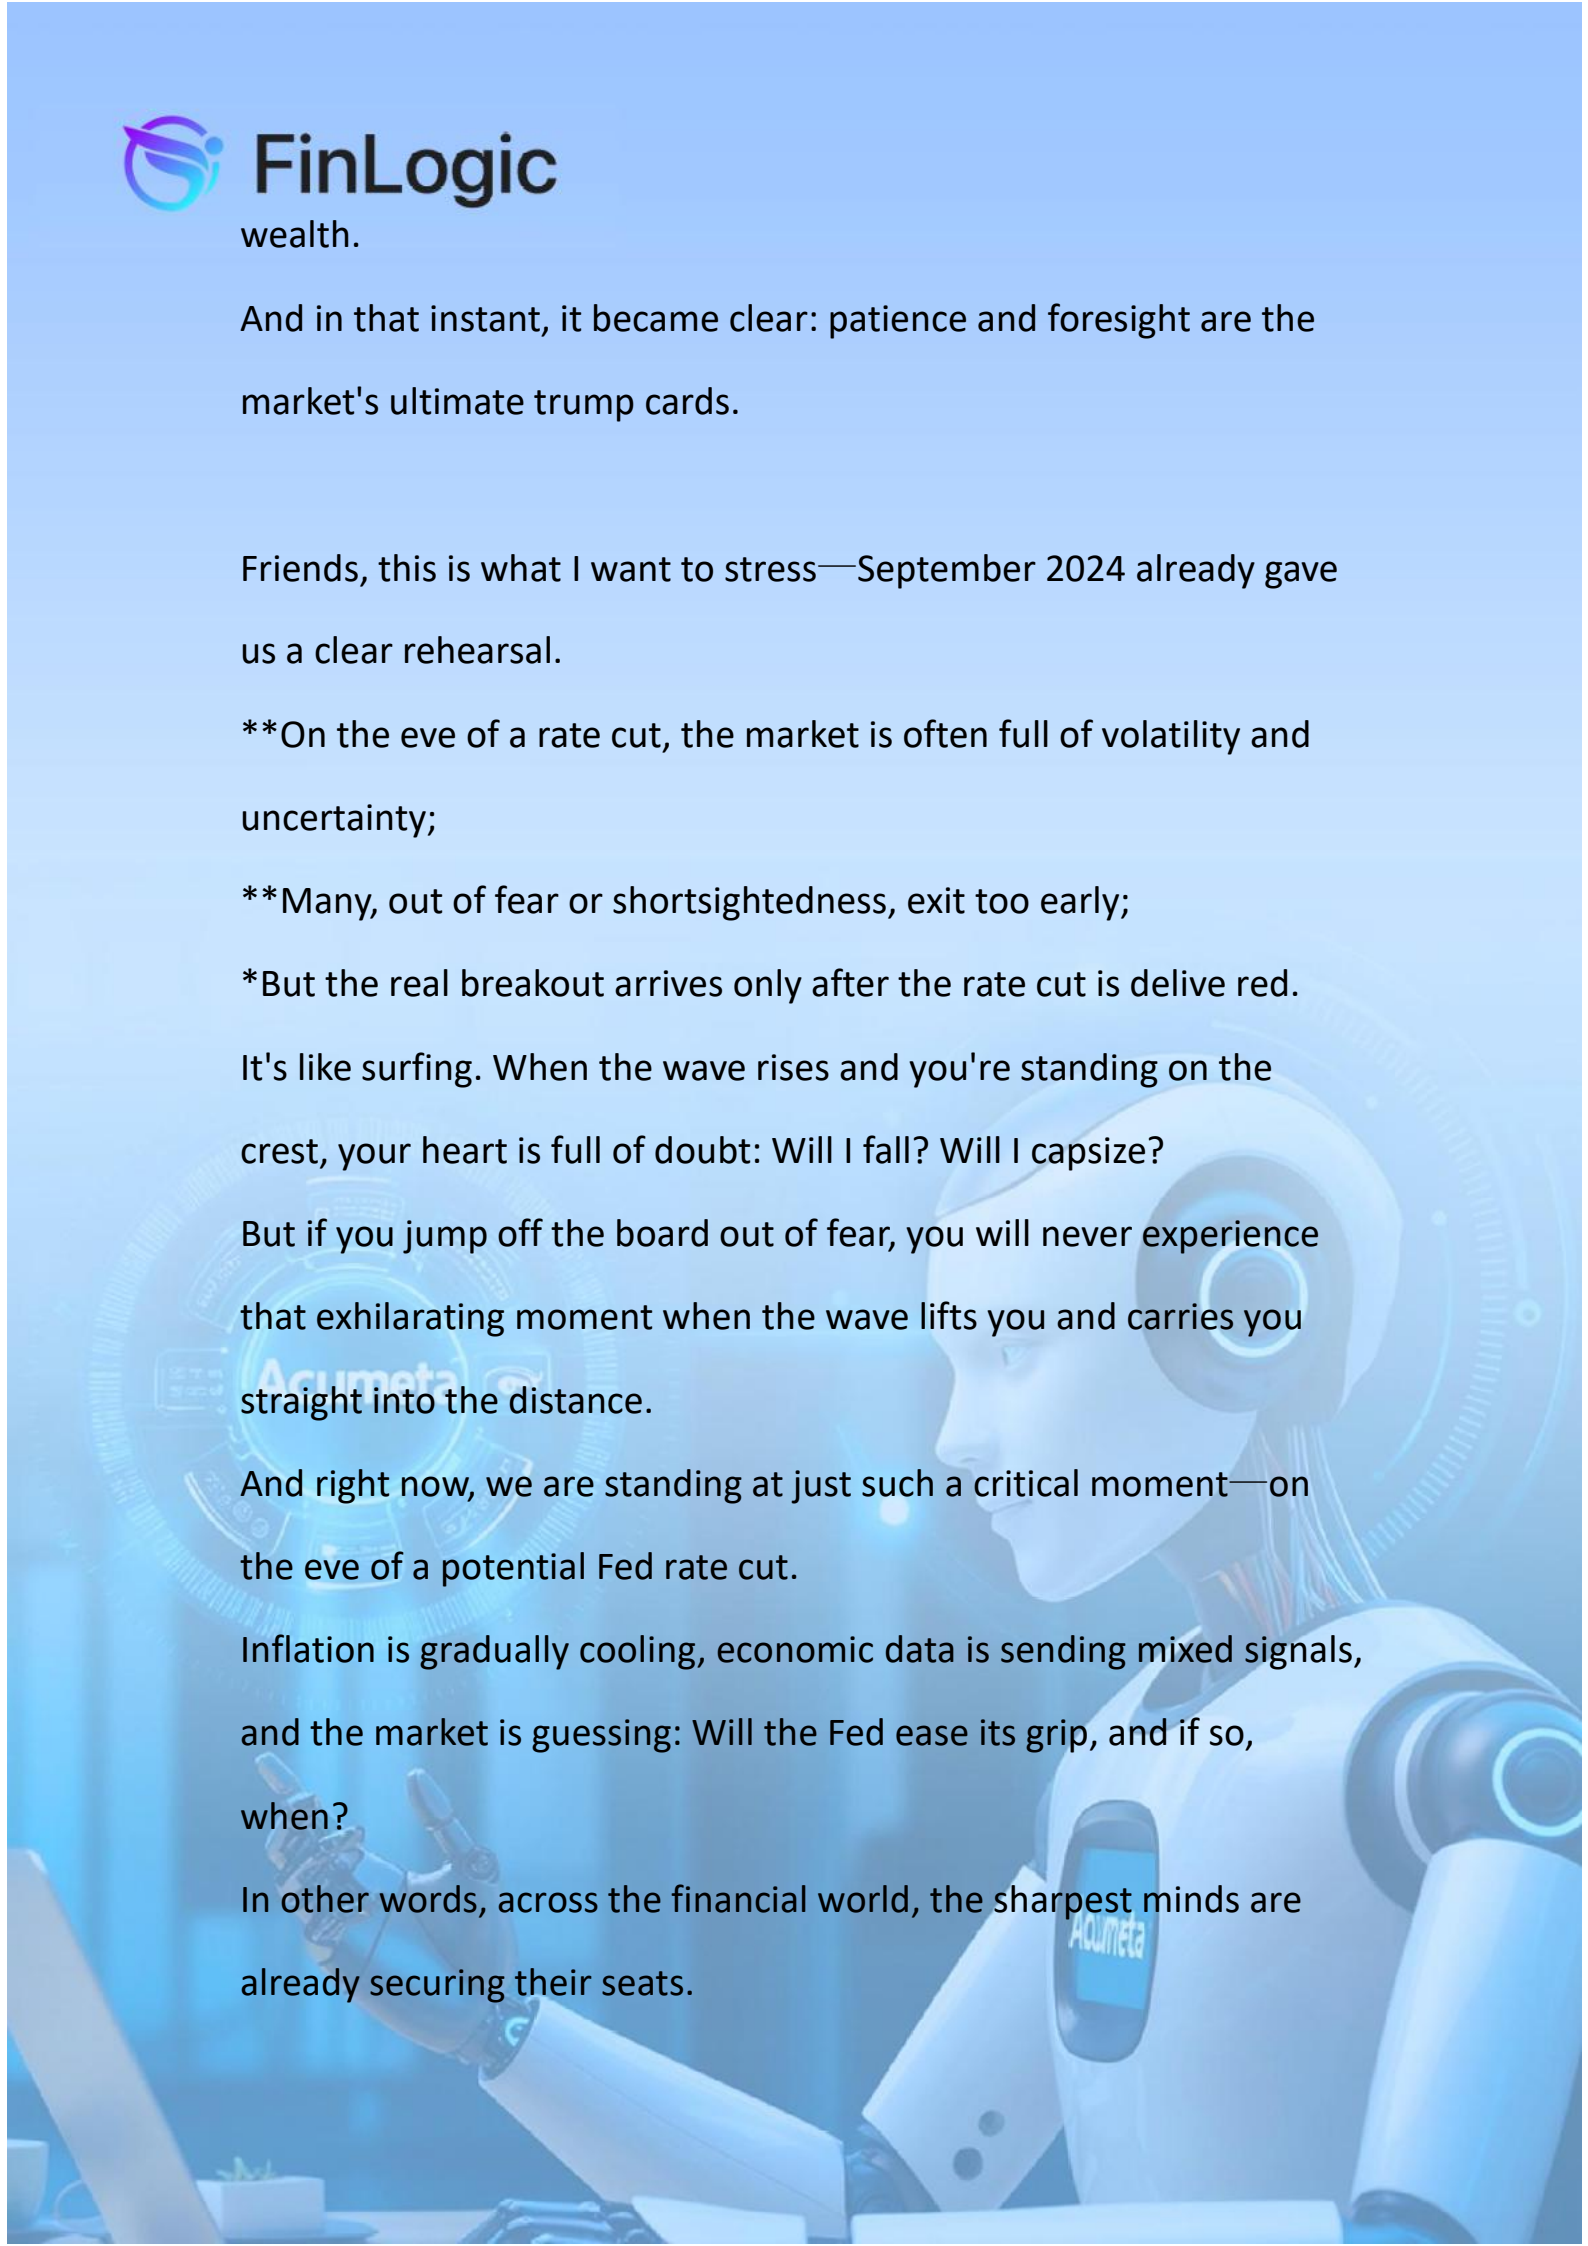

It's like surfing. When the wave rises and you're standing on the crest, your heart is full of doubt: Will I fall? Will I capsize?

But if you jump off the board out of fear, you will never experience that exhilarating moment when the wave lifts you and carries you straight into the distance.

And right now, we are standing at just such a critical moment—on the eve of a potential Fed rate cut.

Inflation is gradually cooling, economic data is sending mixed signals, and the market is guessing: Will the Fed ease its grip, and if so, when?

In other words, across the financial world, the sharpest minds are already securing their seats.

Now, history is repeating itself.

We are living through a moment strikingly similar to last September.

The crypto market is once again volatile, and some are once again uneasy. But I know this is only the calm before the storm. The real opportunity is quietly approaching.

What we are undertaking is an unprecedented super-cycle of wealth revaluation and allocation. With our wisdom and courage, we are capturing the opportunities that are about to arrive.

A Fed rate cut is, in essence, a massive monetary expansion, unleashing waves of cheap capital. And our task is to identify the projects that can transform that capital into our own wealth.

We have tested the BOM new token project, and it is the superstar' capable of realizing our vision. It fuses launch-management in aerospace with blockchain technology, offering unique imagination and extraordinary valuation potential. In the flood of cheap money that will follow the Fed's rate cut, it will stand as one of the greatest beneficiaries, because it is truly scarce and one of a kind.

Because BOM—the major project that was thoroughly validated last Friday through 6 perspectives—is using its outlook to reveal to us the wealth code of the future.

Combined with Acumeta's data modeling, this is no flight of imagination, but a conclusion drawn from cold, rigorous logic: a staggering range of 700% to 1000% potential valuation growth.

Does that sound crazy?

Well, many people's first reaction is: 'Impossible.'

But let's break it down calmly: the current subscription cost is just 1 USDC per token, while once the logic is validated and market demand confirmed, the listing price could be 7 USDC, or even 9 USDC.

You heard correctly. This is not a lottery ticket, nor is it fantasy. It is a mathematical projection built on market trends, policy support, and an industry at its inflection point.

We are not judging BOM's value on empty talk.

Last Friday, with the precision of a microscope, we dissected the project across 6 dimensions, and the conclusion was unanimous: it stands at the crest of the future wave.

Trump's executive order flung open the doors of the space market, releasing an immediate policy dividend;

America's return-to-the-moon program has ignited a new surge of aerospace innovation;

Industry giants like Blue Origin are introducing crypto payments into

space commerce, with BTC and ETH stepping in directly;

Celebrity billionaires' space tourism has sparked a consumption wave, much like the first adopters of the iPhone;

Rocket logistics is accelerating, with blockchain-based management models embedded within;

Musk's Starship program has driven capital into a frenzy, rushing headlong into the sector.

Taken together, these 6 perspectives form not just a logical loop but '6 keys to wealth'

BOM is no longer a mere concept—it is the future, lifted by reality itself.

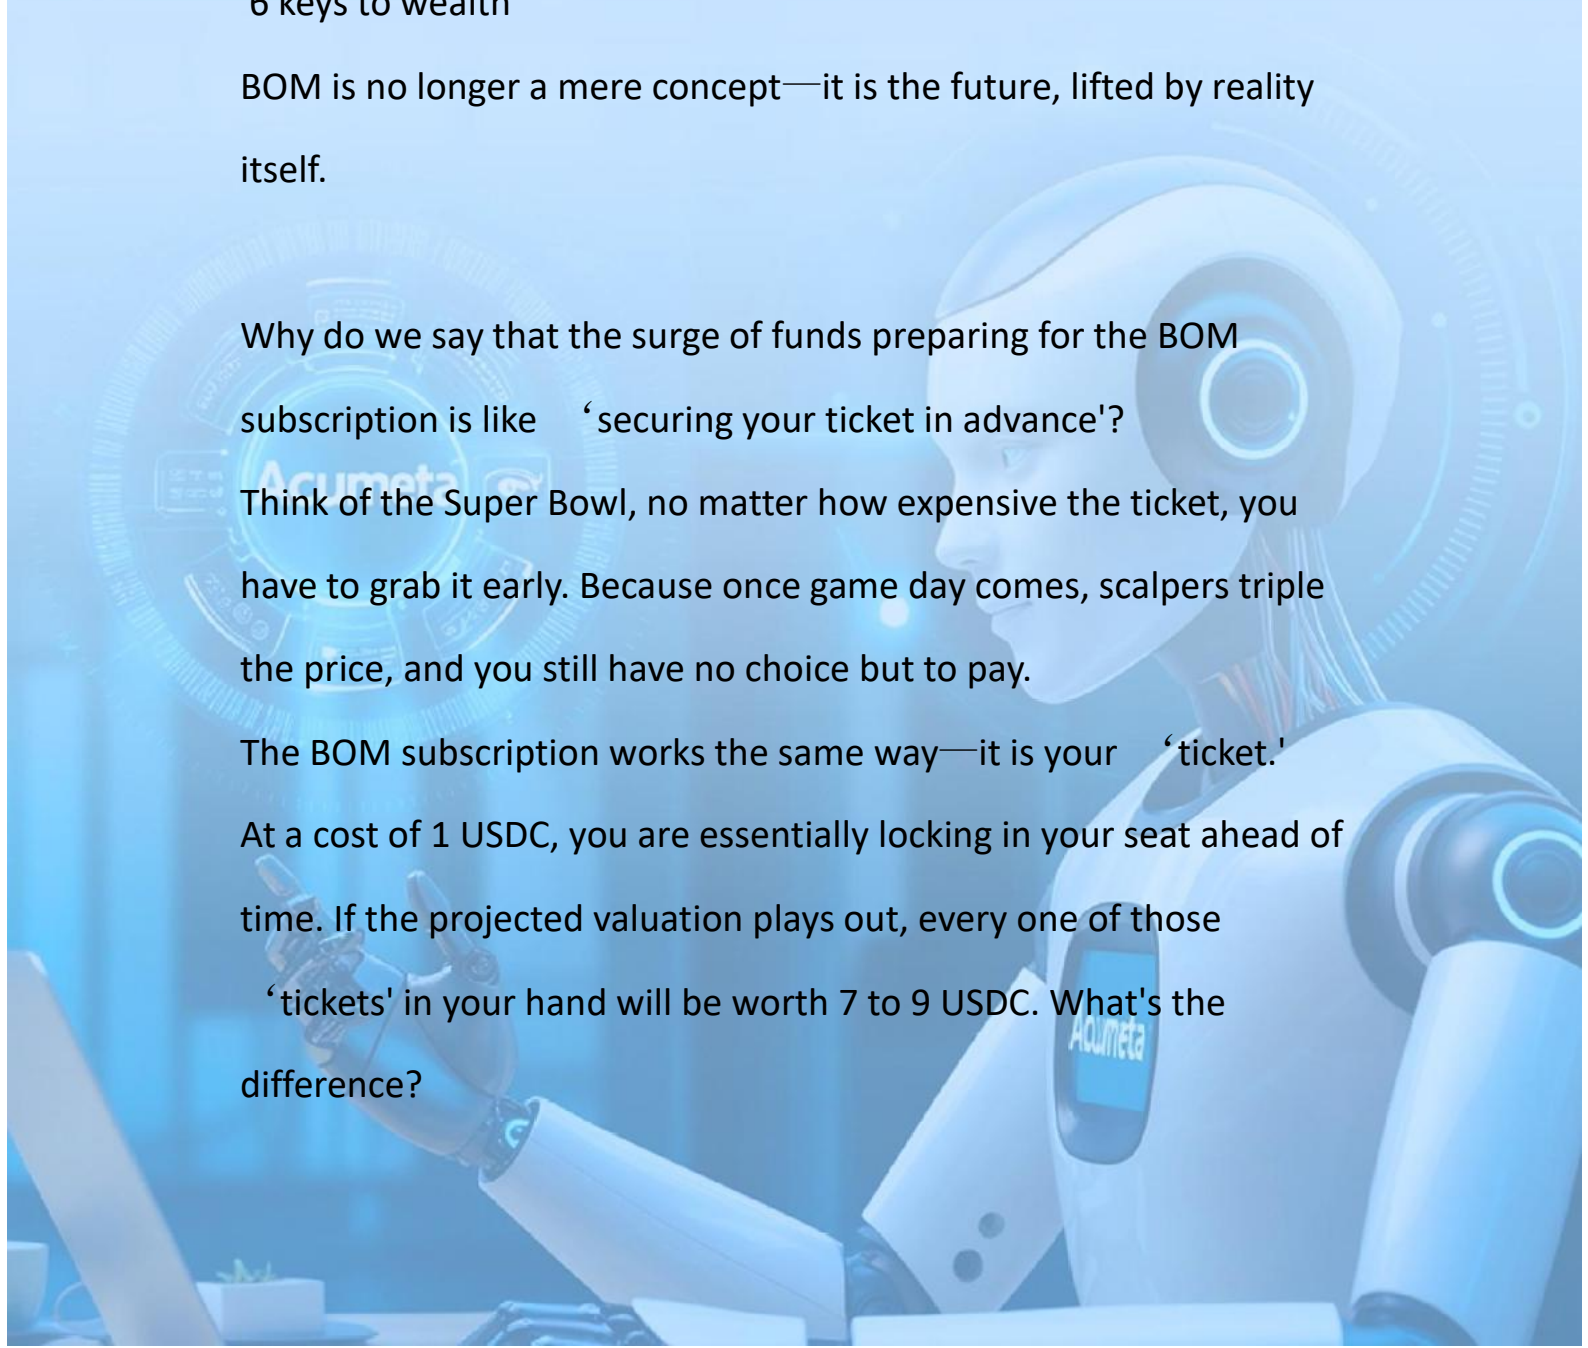

Why do we say that the surge of funds preparing for the BOM subscription is like 'securing your ticket in advance'?

Think of the Super Bowl, no matter how expensive the ticket, you have to grab it early. Because once game day comes, scalpers triple the price, and you still have no choice but to pay.

The BOM subscription works the same way—it is your 'ticket.'

At a cost of 1 USDC, you are essentially locking in your seat ahead of time. If the projected valuation plays out, every one of those

'tickets' in your hand will be worth 7 to 9 USDC. What's the difference?

The difference lies in whether you are willing, today, to take the time to ready your account, convert into USDC, and secure that first-second subscription slot.

Because when the subscription opens tomorrow, Tuesday, only those who actually hold USDC in their trading accounts will be able to move at top speed to claim that position in the very first second. And that position reflects the very wisdom we gained from AIG's token allocation results, the execution of the time-priority principle. Have you prepared the funds for your first-second subscription? The BOM Early Bird Subscription Plan is designed to help you secure a larger share of BOM!

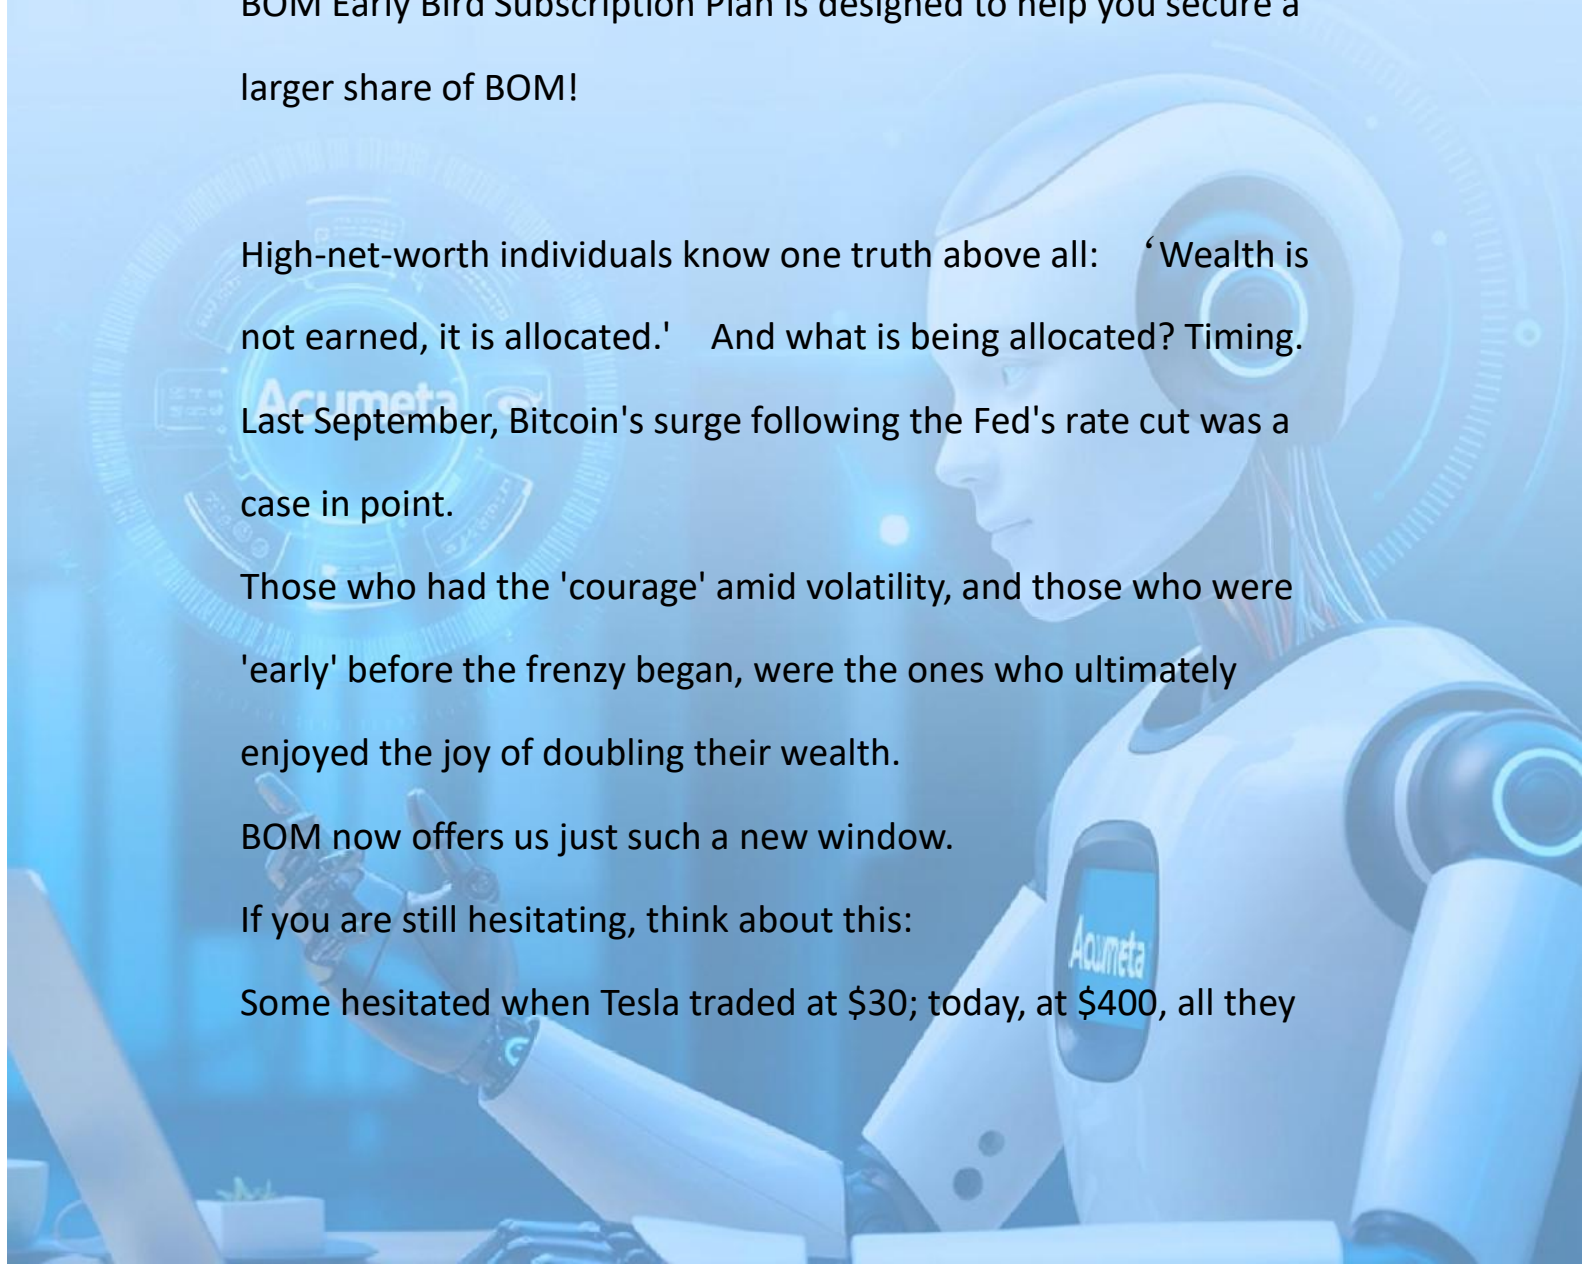

High-net-worth individuals know one truth above all: 'Wealth is not earned, it is allocated.' And what is being allocated? Timing. Last September, Bitcoin's surge following the Fed's rate cut was a case in point.

Those who had the 'courage' amid volatility, and those who were 'early' before the frenzy began, were the ones who ultimately enjoyed the joy of doubling their wealth.

BOM now offers us just such a new window.

If you are still hesitating, think about this:

Some hesitated when Tesla traded at \$30; today, at \$400, all they

can do is sigh.

Some doubted Amazon when it was still just a small e-commerce shop; today, with a trillion-dollar valuation, they can only mutter,

‘If only I had...’

Some shook their heads when Bitcoin was at \$2,000; today, at \$110,000, they can only smile bitterly.

**\*\*Pals, the essence of wealth is this: ‘courage + timing.’\*\***

Whether you are willing today to prepare that 1 USDC is the dividing line between whether you will capture a 7 to 9x return in the future, or not.

Whether through directly purchased crypto or through your prepared crypto assets, you can transfer them straight into your account at ETHERMAC crypto trading center.

This is a crypto service provider registered in Colorado, and what attracted me most were the official service guidance and the detailed security protections it offers.

Its active embrace of MSB regulation signals participation in the broader regulatory feast of 2025. Congress's passage of the three

major crypto bills has already laid out specific policy support for this sector, and this trading center is among the beneficiaries.

In addition, its secure asset registry, together with USDC settlement units structured in line with the Congressional Stablecoin Act, confirms the importance of embracing secure regulation.

And today, having experienced this firsthand, you can see why our choice was the right one!

How to turn your traditional assets into capital power on-chain—safely, quickly, and seamlessly.

You may hold cash, gold, or even large sums in bank wire transfers.

But without the right channel, they are like a luxury car parked in the garage without fuel: no matter how dazzling, it cannot move.

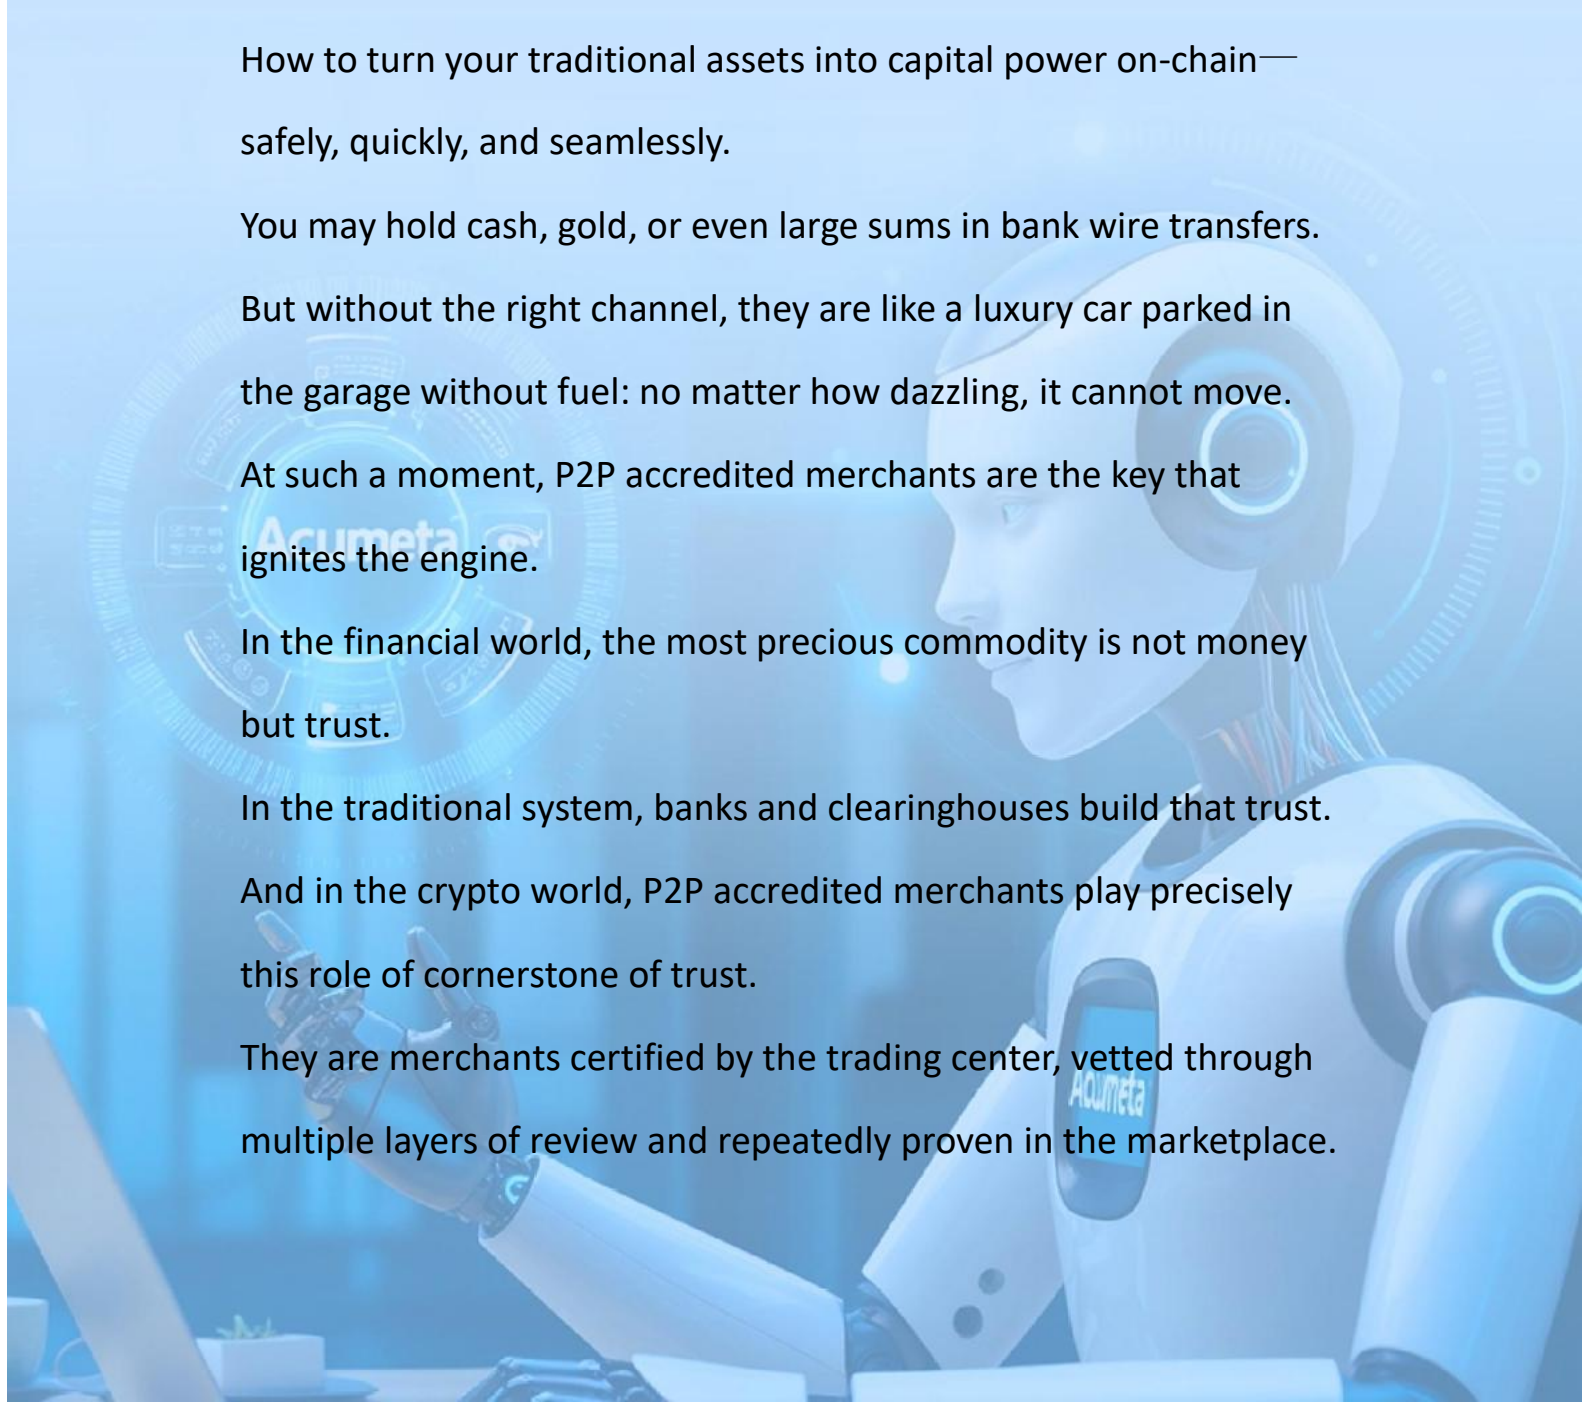

At such a moment, P2P accredited merchants are the key that ignites the engine.

In the financial world, the most precious commodity is not money but trust.

In the traditional system, banks and clearinghouses build that trust.

And in the crypto world, P2P accredited merchants play precisely this role of cornerstone of trust.

They are merchants certified by the trading center, vetted through multiple layers of review and repeatedly proven in the marketplace.

They enable you to take the final step—converting those traditional assets into USDC that circulates on-chain. This is not merely an act of exchange, it is a transformation of identity: from a traditional wealth holder to a player in on-chain capital.

For advance funding arrangements and exchange inquiries, please contact the official cs manager to schedule your reservation.

In this world, there are always ‘cheaper options.’ But for high-net-worth individuals, safety is the first rule.

That is where the value of P2P accredited merchants lies. They are not casual players who appeared overnight, but merchants tested by the market, the platform, and time itself.

As the saying goes: ‘Hand your money to a stranger and it's gambling; hand it to an accredited merchant and it's asset management.’

Wire transfers are the most common way to move large sums. Many high-net-worth individuals rely on them for asset transfers in the hundreds of thousands, even millions of dollars.

In the past, such funds remained trapped within the traditional banking system, with limited liquidity. Now, through P2P accredited merchants, these large wire transfers can be quickly connected to the blockchain, converted into USDC, and gain an entirely different

# FinLogic

level of liquidity and growth potential.

What is it like?

It's as if you once drove a steady Cadillac—reliable but limited in speed.

But once those funds are converted on-chain, it's as though you've switched to a Tesla, silent, but with the ability to break 100 in a single push of the pedal. The speed and efficiency are simply on another level.

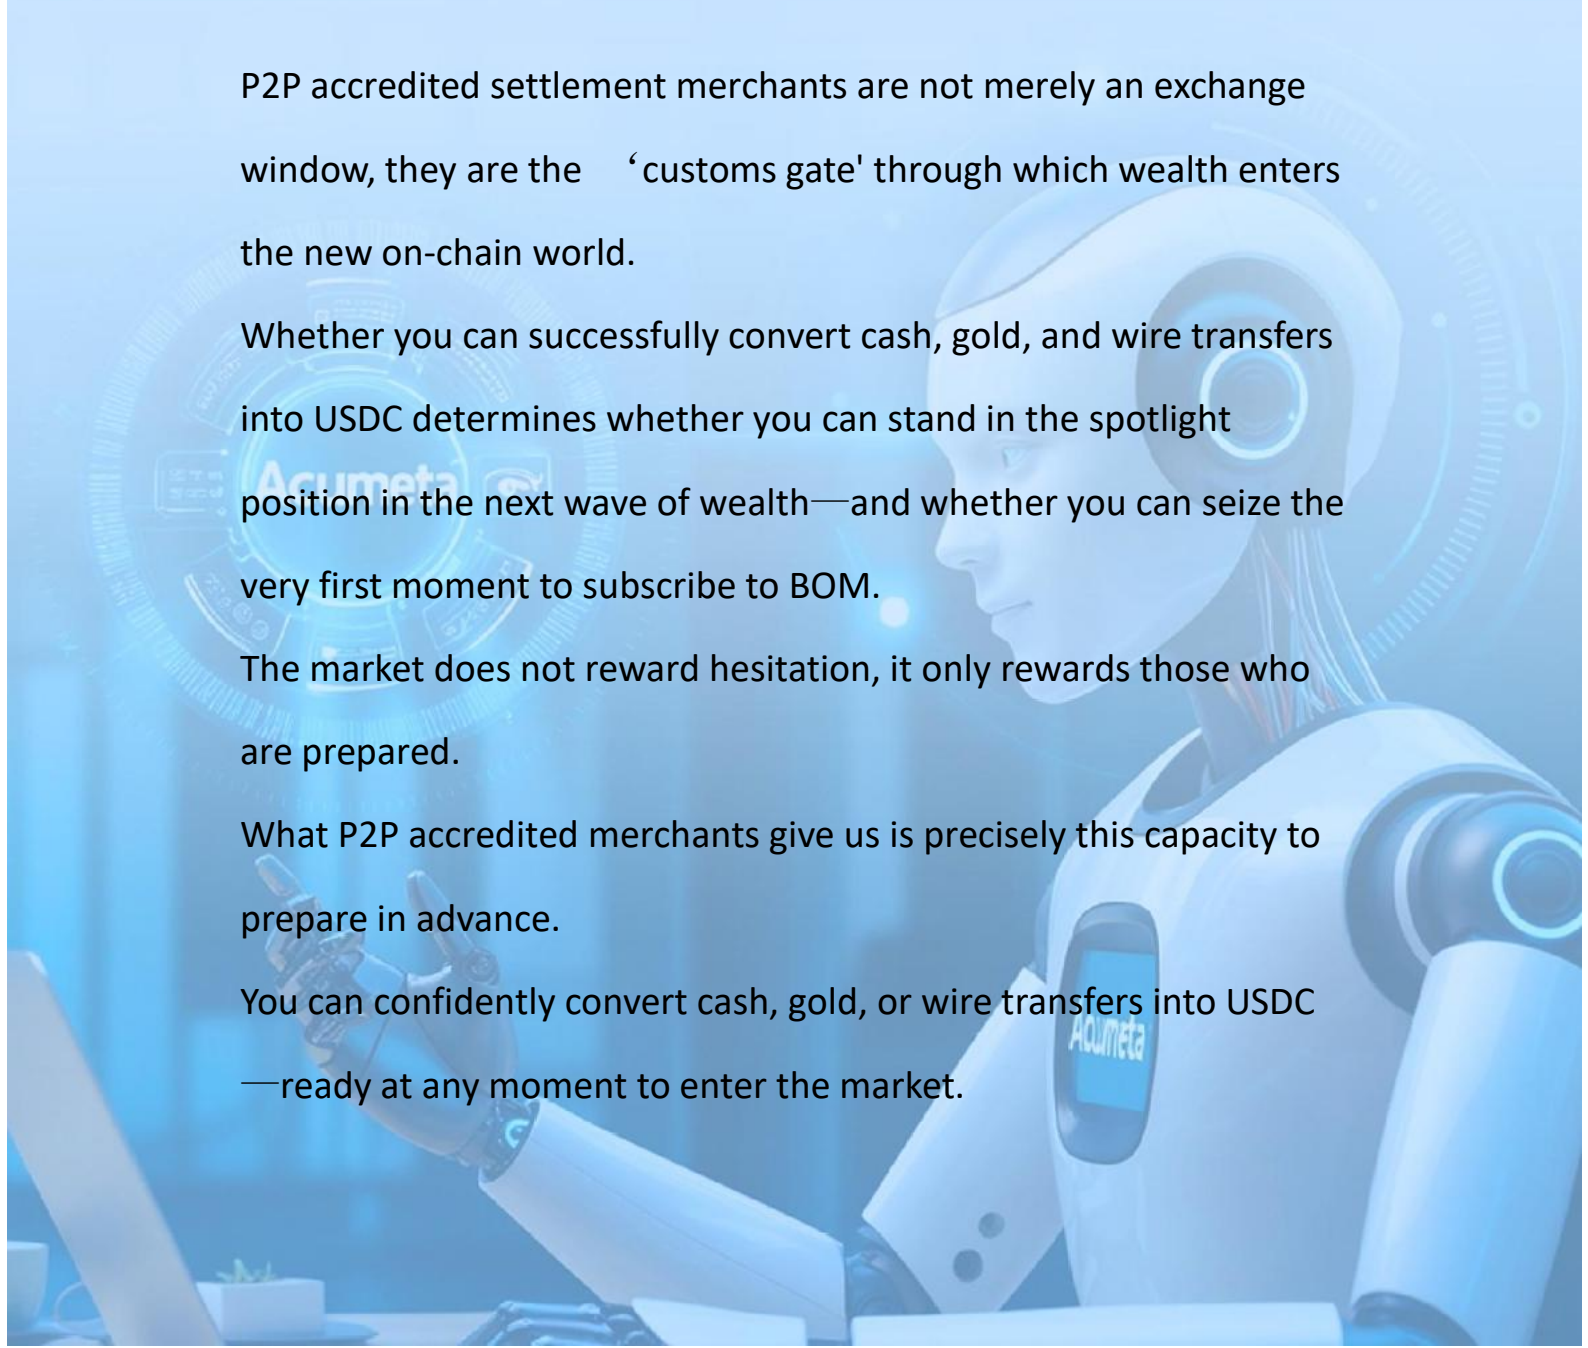

P2P accredited settlement merchants are not merely an exchange window, they are the 'customs gate' through which wealth enters the new on-chain world.

Whether you can successfully convert cash, gold, and wire transfers into USDC determines whether you can stand in the spotlight position in the next wave of wealth—and whether you can seize the very first moment to subscribe to BOM.

The market does not reward hesitation, it only rewards those who are prepared.

What P2P accredited merchants give us is precisely this capacity to prepare in advance.

You can confidently convert cash, gold, or wire transfers into USDC—ready at any moment to enter the market.

That is the nature of today's crypto world: the swell of the wave is already rising in the distance. The real question is, have you readied your surfboard?

USDC is that surfboard, and P2P accredited merchants are the ones placing it in your hands.

The most painful scene in the world of wealth is not losing money, but watching others make it while you lack even the right to participate. A single simple action can create entirely different outcomes.

Pals, leaders of the BOM Early Bird Subscription Plan:

Labor Day is supposed to be about backyard barbecues, cold beer, and football. But for true high-net-worth players, this day is more than leisure—it is an acceleration day for preparing on-chain wealth. Thank you for following my program!

Wealth is a lot like basketball: you can clap and cheer from the sidelines, but the ones who actually score are always those on the court.

Every step of funding preparation you take today is like securing your position under the basket, ready to grab the pass and slam it home.

When the opportunity comes, you won't be passive—you'll be

ready to strike.

The BOM allocation rules are clear: the earlier you prepare, the better your chance of securing tokens. Hesitate for even a second, and you may miss the mark by miles.

The code of wealth has always been written in three words: priority of access.

And Monday night's currency surfing signal is your best assist for expanding your BOM new token subscription. Be sure to contact my assistant to receive the detailed signal information.

Labor Day rest is essential, but preparation is the essence. On-chain wealth always belongs to those who are ready. See you Tuesday!
