

Tuesday, Sep 2, 2025

BOM subscription action day, currency surfing pioneers:

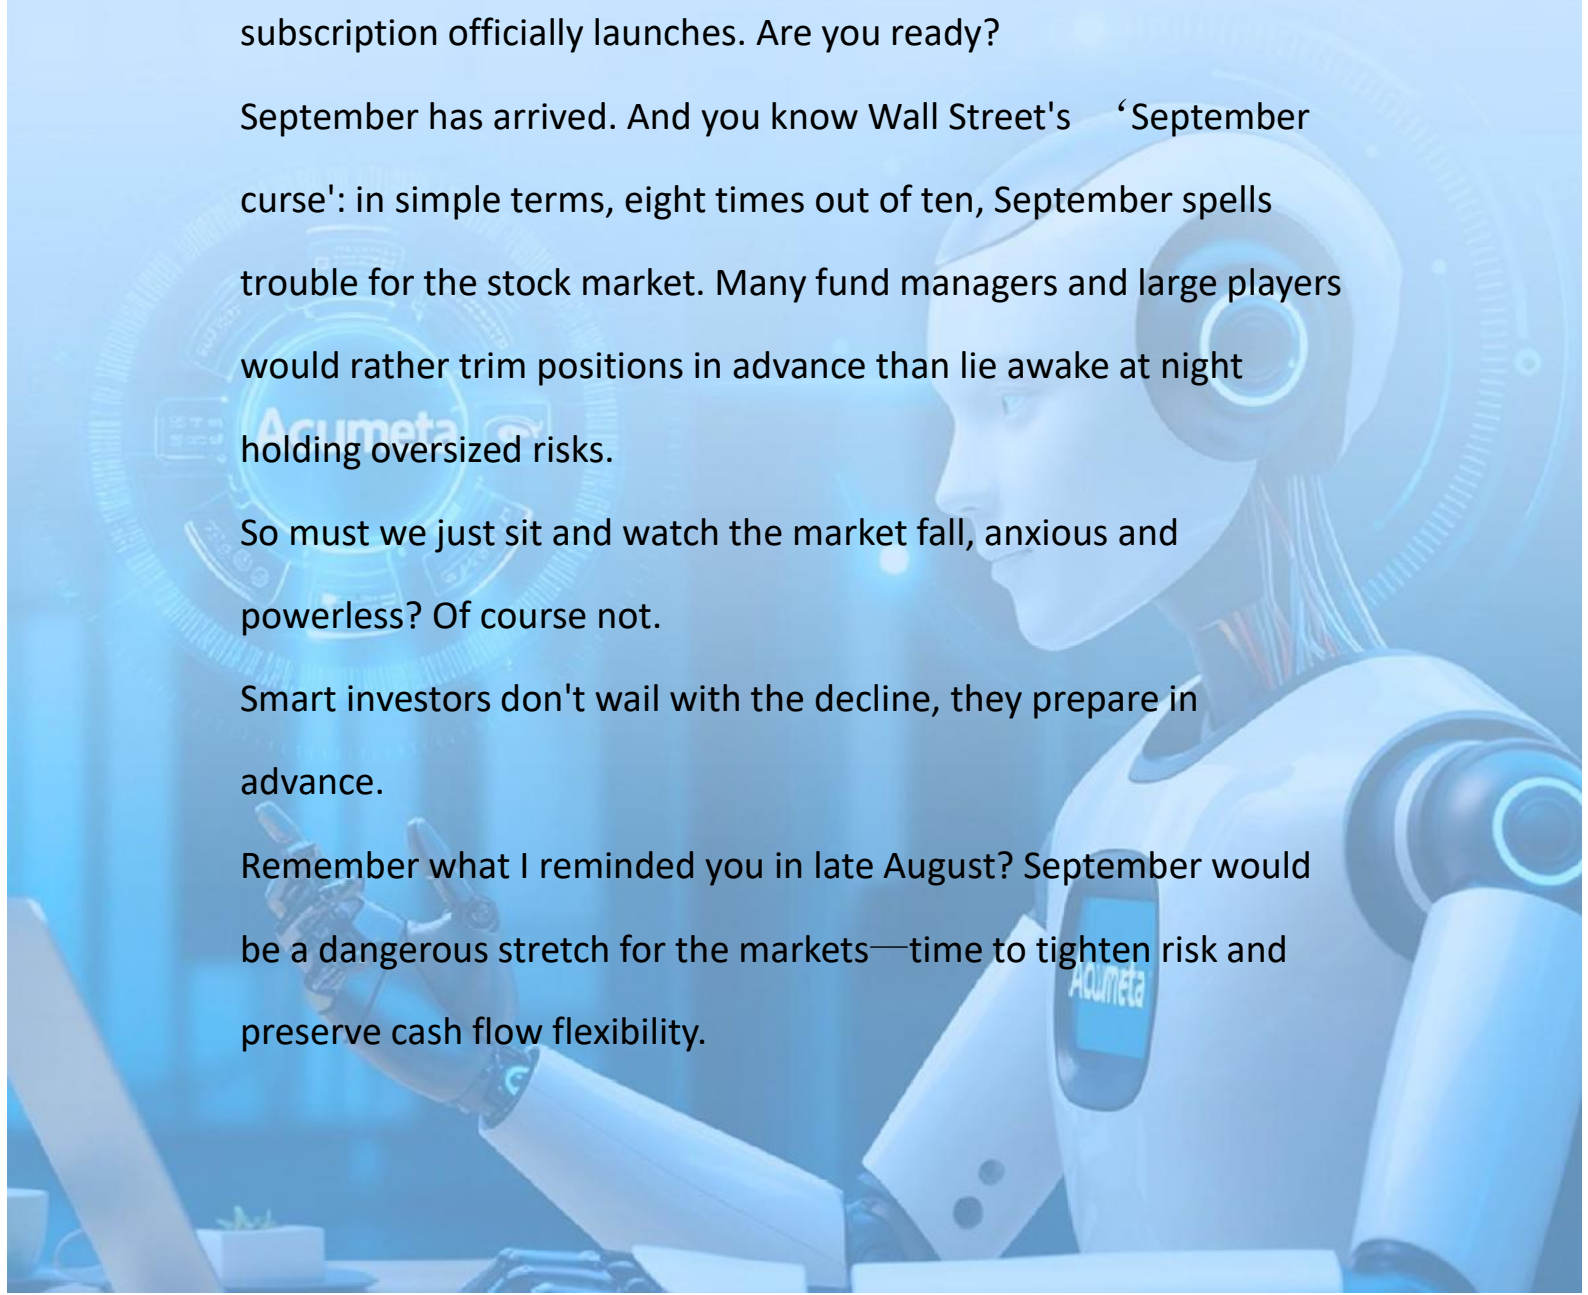

Good morning! Welcome back from the Labor Day holiday to my quantitative investment forum. You may still be half-immersed in the parties of the long weekend, but already some have stepped ahead of you—standing in the front row of on-chain wealth preparation. Everything is now waiting for Tuesday, when the BOM subscription officially launches. Are you ready?

September has arrived. And you know Wall Street's 'September curse': in simple terms, eight times out of ten, September spells trouble for the stock market. Many fund managers and large players would rather trim positions in advance than lie awake at night holding oversized risks.

So must we just sit and watch the market fall, anxious and powerless? Of course not.

Smart investors don't wail with the decline, they prepare in advance.

Remember what I reminded you in late August? September would be a dangerous stretch for the markets—time to tighten risk and preserve cash flow flexibility.

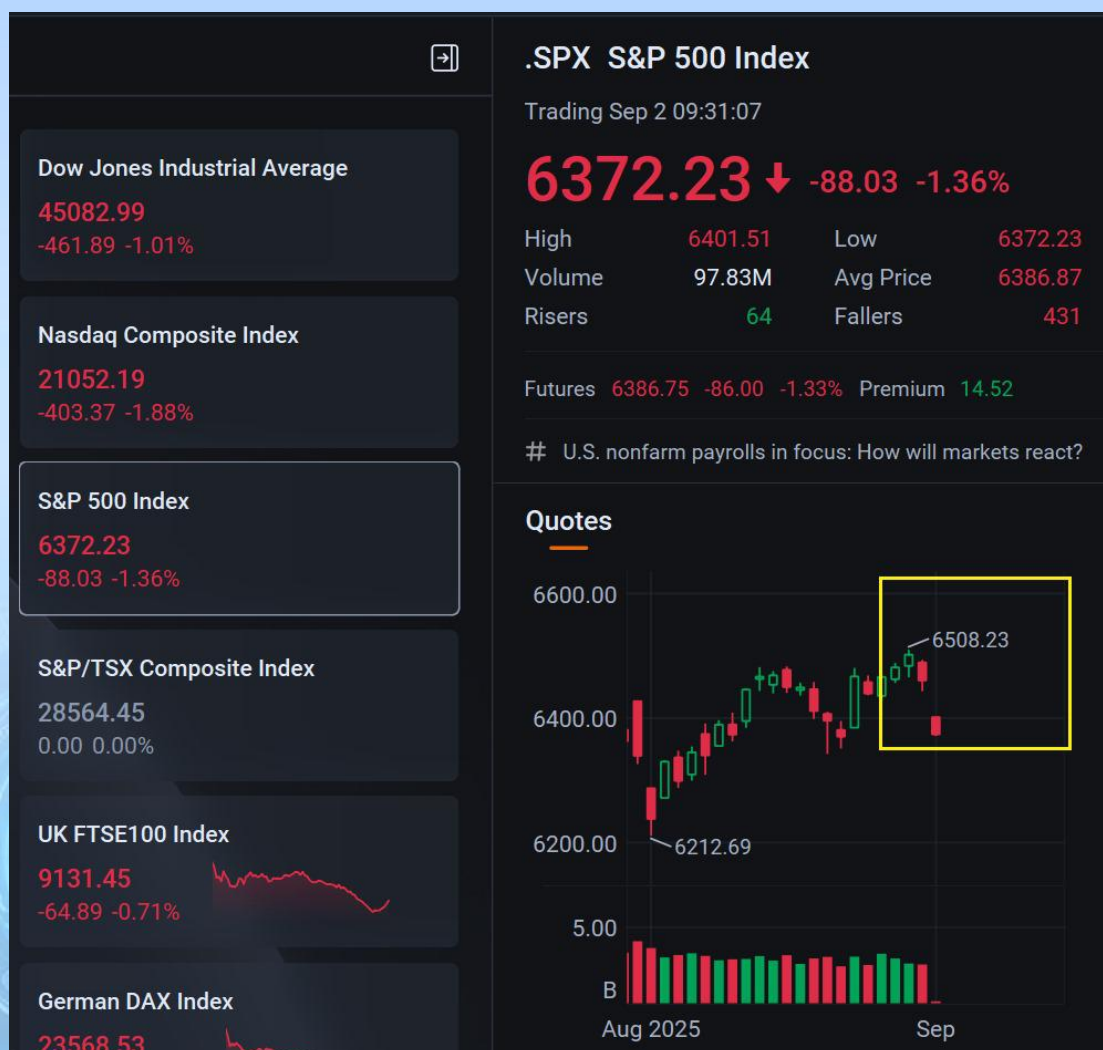

FinLogic

THE BOM NEW TOKEN PROJECT TAKES THE STAGE WITH DISTINCTION

At the time, many were doubtful, but looking back now, those who listened and adjusted their positions not only avoided the downturn but also preserved their ammunition, ready to seize the next opportunity. That is the power of foresight.

Equity index futures tumbled in pre-market trading, signaling an extraordinary week ahead as nonfarm payrolls play out.

This is no mystical prophecy. It is forward-looking analysis grounded in data, history, and the recurring cycles of human greed and fear.

In our circle of quantitative strategy, we do not trade on 'feelings.'

We trade on 'probabilities' and 'expectation management.'

Our aim is not to shout the loudest in the marketplace, but to have already guided our vessel quietly into the safest harbor before the storm arrives.

Looking back now, doesn't that decision, that judgment of a 'danger zone,' bring you a sense of reassurance?

While others lament the shrinkage of their accounts, we can sit calmly, watching the stock market's swings like a film whose ending we already know.

We did not evade the downturn, we 'surpassed' it.

This is the value of foresight: it turns you from a passive sufferer of markets into an active manager of risk.

But merely avoiding a decline has never been our ultimate goal.

That is only defense.

A true player knows how to find order amid chaos, and to uncover opportunity within crisis.

A screenshot of the FinLogic web interface. At the top, there are three tabs: 'Subscribe', 'Allocation', and 'History'. The 'Subscribe' tab is active, showing a list of upcoming token offerings. The first offering is 'BOM / USDC', which is scheduled to start on 09/02/2025 at 10:00:00 AM ET and end on 09/10/2025 at 12:00:00 PM ET. The progress bar for this offering is at 0.00%. There are green arrows pointing to the 'Subscribe' tab, the 'BOM / USDC' offering, and the start time.

A brand-new STO token issuance project, code-named BOM, has passed multiple layers of our internal review.

I won't adorn it with excessive rhetoric here, because for people at our level, facts and logic matter far more than ornate words.

We have rated its risk level as a [0 risk] subscription, based on its unique token-subscription design and the strength of its backing.

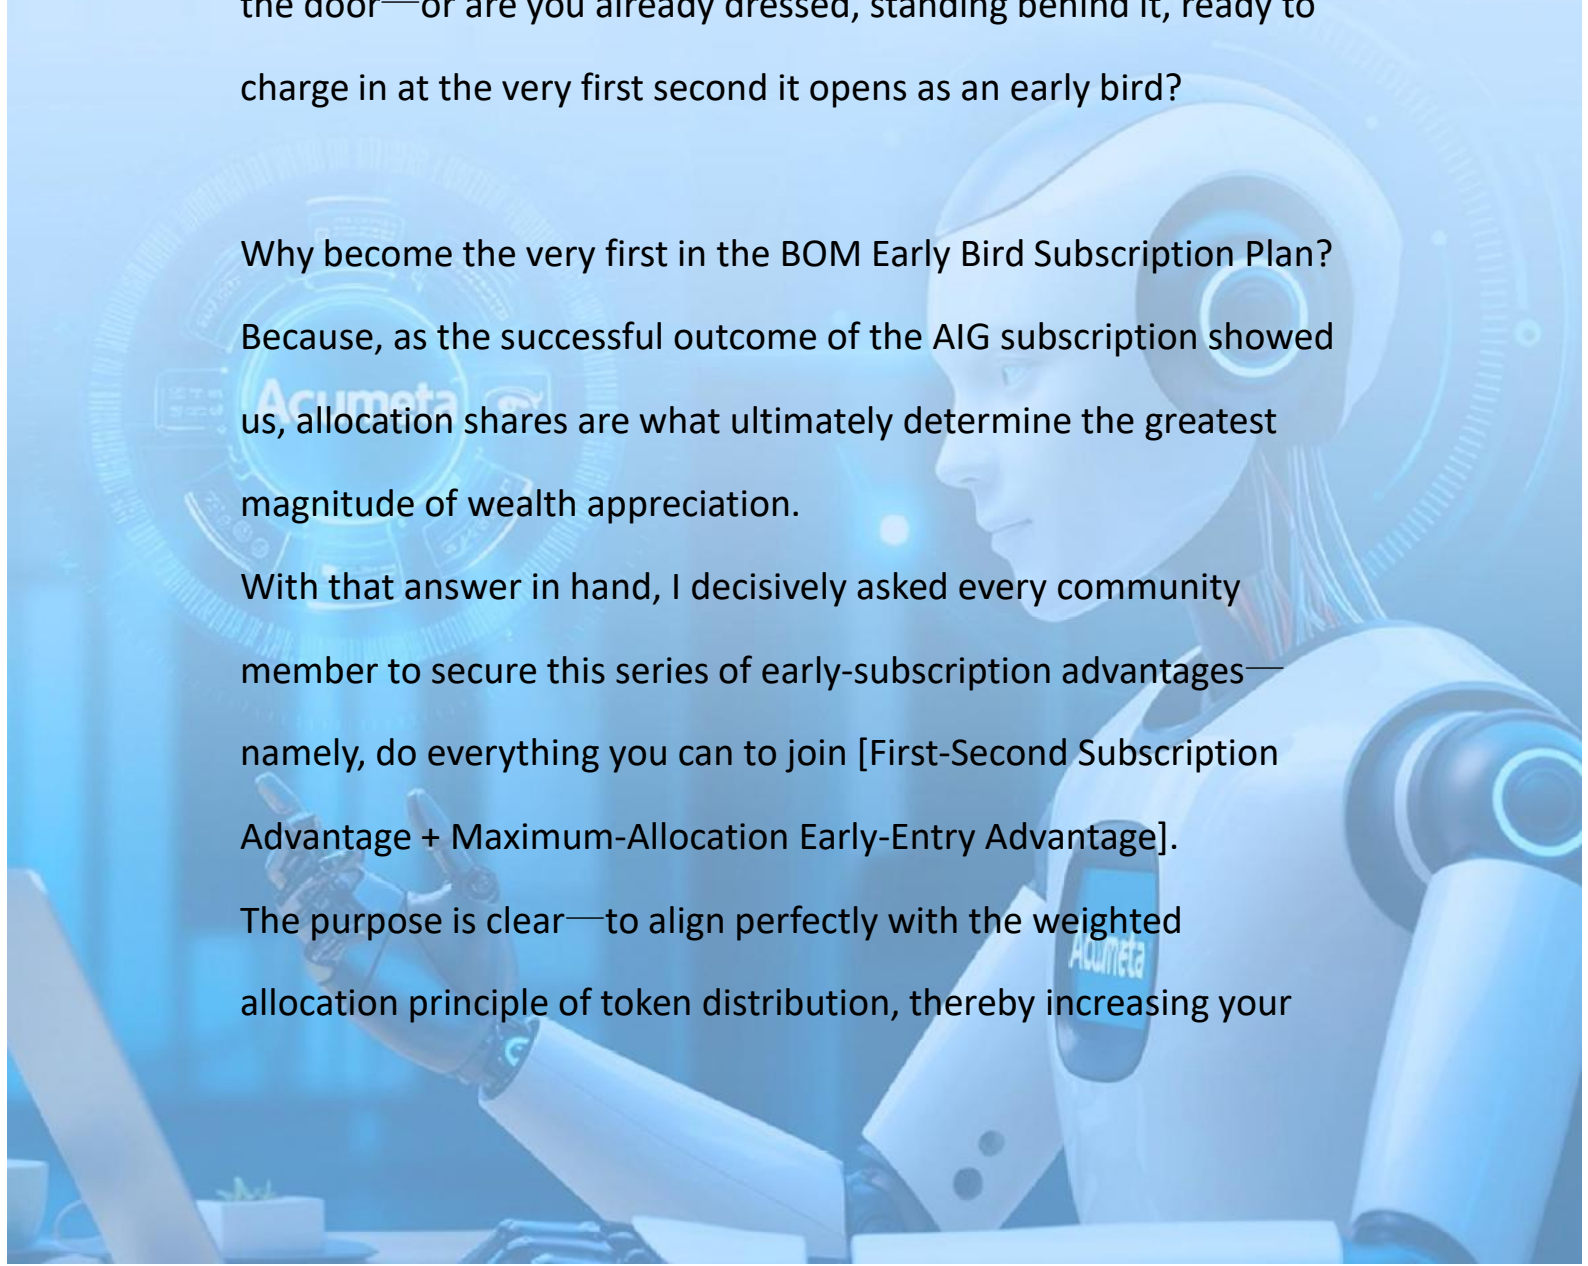

More importantly, the subscription for BOM is about to begin. This is not a noisy public carnival; it is a private dinner to which only the invited may come.

Now let me pose a question to everyone here: when opportunity rings the doorbell, are you still hesitating about whether to open the door—or are you already dressed, standing behind it, ready to charge in at the very first second it opens as an early bird?

Why become the very first in the BOM Early Bird Subscription Plan? Because, as the successful outcome of the AIG subscription showed us, allocation shares are what ultimately determine the greatest magnitude of wealth appreciation.

With that answer in hand, I decisively asked every community member to secure this series of early-subscription advantages—namely, do everything you can to join [First-Second Subscription Advantage + Maximum-Allocation Early-Entry Advantage].

The purpose is clear—to align perfectly with the weighted allocation principle of token distribution, thereby increasing your

future share of allotment.

And if the final subscription progress data for BOM points to profits exceeding 700%, then it should be clear how right your decision to act as an early bird today will prove to be.

Have you begun to act? Will you be a subscriber, or one of the very first subscribers?

How do you become that exceptional early bird subscriber to BOM?

We can judge from the data that whether or not you adopt this early-subscription strategy, the facts will ultimately highlight one truth: taking the lead now means securing a greater share of BOM allocation opportunities.

Take Mr. A as an example. On Tuesday at 10 a.m., the moment BOM subscriptions opened, he immediately acted. That shows he had already completed all funding preparations during the preceding holiday.

Every step of that preparation proved his decisiveness and execution, placing him ahead of others.

Not only did he choose to subscribe at the very first moment, but he also committed more than 300k USDC in subscription volume.

This revealed his determination to secure over 300k tokens.

As a result, the AI-weighted allocation system recorded his actions,

leaving him in a highly advantageous position for future distribution.

It is like the final 5 secs of a championship game, the shooter who sinks the winning basket does so because he was already standing in the corner, perfectly positioned, long before anyone else noticed—ready to receive the pass and hit the shot.

And how does Mr. B become a follower? Here is the second interpretation of the BOM Early Bird Subscription Plan:

When you miss the very first second—the initial phase today—you must compensate by subscribing with the largest possible allocation in order to catch up.

Because the weighted allocation mechanism determines the outcome, the way to make up for lost time is to lean on the principle of large-volume priority, that becomes your best option.

Suppose Mr. B wishes to surpass Mr. A and increase his allocation weight, then he must commit more than 500k in subscriptions, perhaps much more.

Well, every dollar deployed is a statement of intent. It shows how strongly you desire this new token and how firmly you believe in this blockchain-financing initiative for the aerospace sector.

The results will not deceive you, and every action you take now is

the seed of tomorrow's outcome. Do you understand, pal?

There may still be some newcomers who have never truly experienced an IPO subscription or the previous AIG token subscription, and they may still wonder: where exactly does the risk lie in this project?

Let me be blunt—this is a [0 risk] investment action!

Well, you heard me right, absolutely no risk!

Whether you subscribe 10k, 200k, or even over 1 million, these funds allocated to BOM show nothing more than how strongly you want to obtain this token. And through my program, you've also received validation of this project's valuation and its future potential.

So when the subscription period ends and the allocation results are published, your only concern will be whether you received enough allotment. Your money will not vanish, it will not be harmed. All unallocated funds will be returned in full to your account at ETHERMAC crypto trading center. Those funds are still yours.

Now do you understand why you should increase your subscription???

Of course, some newer subscribers here may still ask: why are you

pushing so strongly for the BOM new token subscription?

That is a fair question!

First, as a Quantitative Think Tank Center, we have always been committed to building quantitative strategies, decisions, and signals that deliver real results. Over a long period of time, I have led every community member in actively testing and verifying these strategies, and together we have achieved victories in equities, reserve tokens, and the carnival of new token subscriptions.

This has proven the value of our quantitative approach.

So how should we assess the value of our quantitative strategies today?

If the most direct way to measure the value of NVIDIA is to look at its stock price, then by the same logic, the value of our quantitative services is reflected in the market price fluctuations of our token FGT.

As things stand, that price has continued to rise—clear evidence that the market is choosing our services, and recognizing our work.

Thus, our investment in the BOM token project is driven above all by considerations of return on investment and profit potential!

A 0 risk investment project must, by definition, be approached from the perspective of safeguarding entry for our community members!

And the prospective valuation of the new BOM token fully merits market anticipation and a rush to subscribe. You must understand, while the projected profit range of 700 – 1000% has not yet been formally recognized by the market, we already validated through the AIG token that the BOM subscription progress chart will tell us everything we need to know.

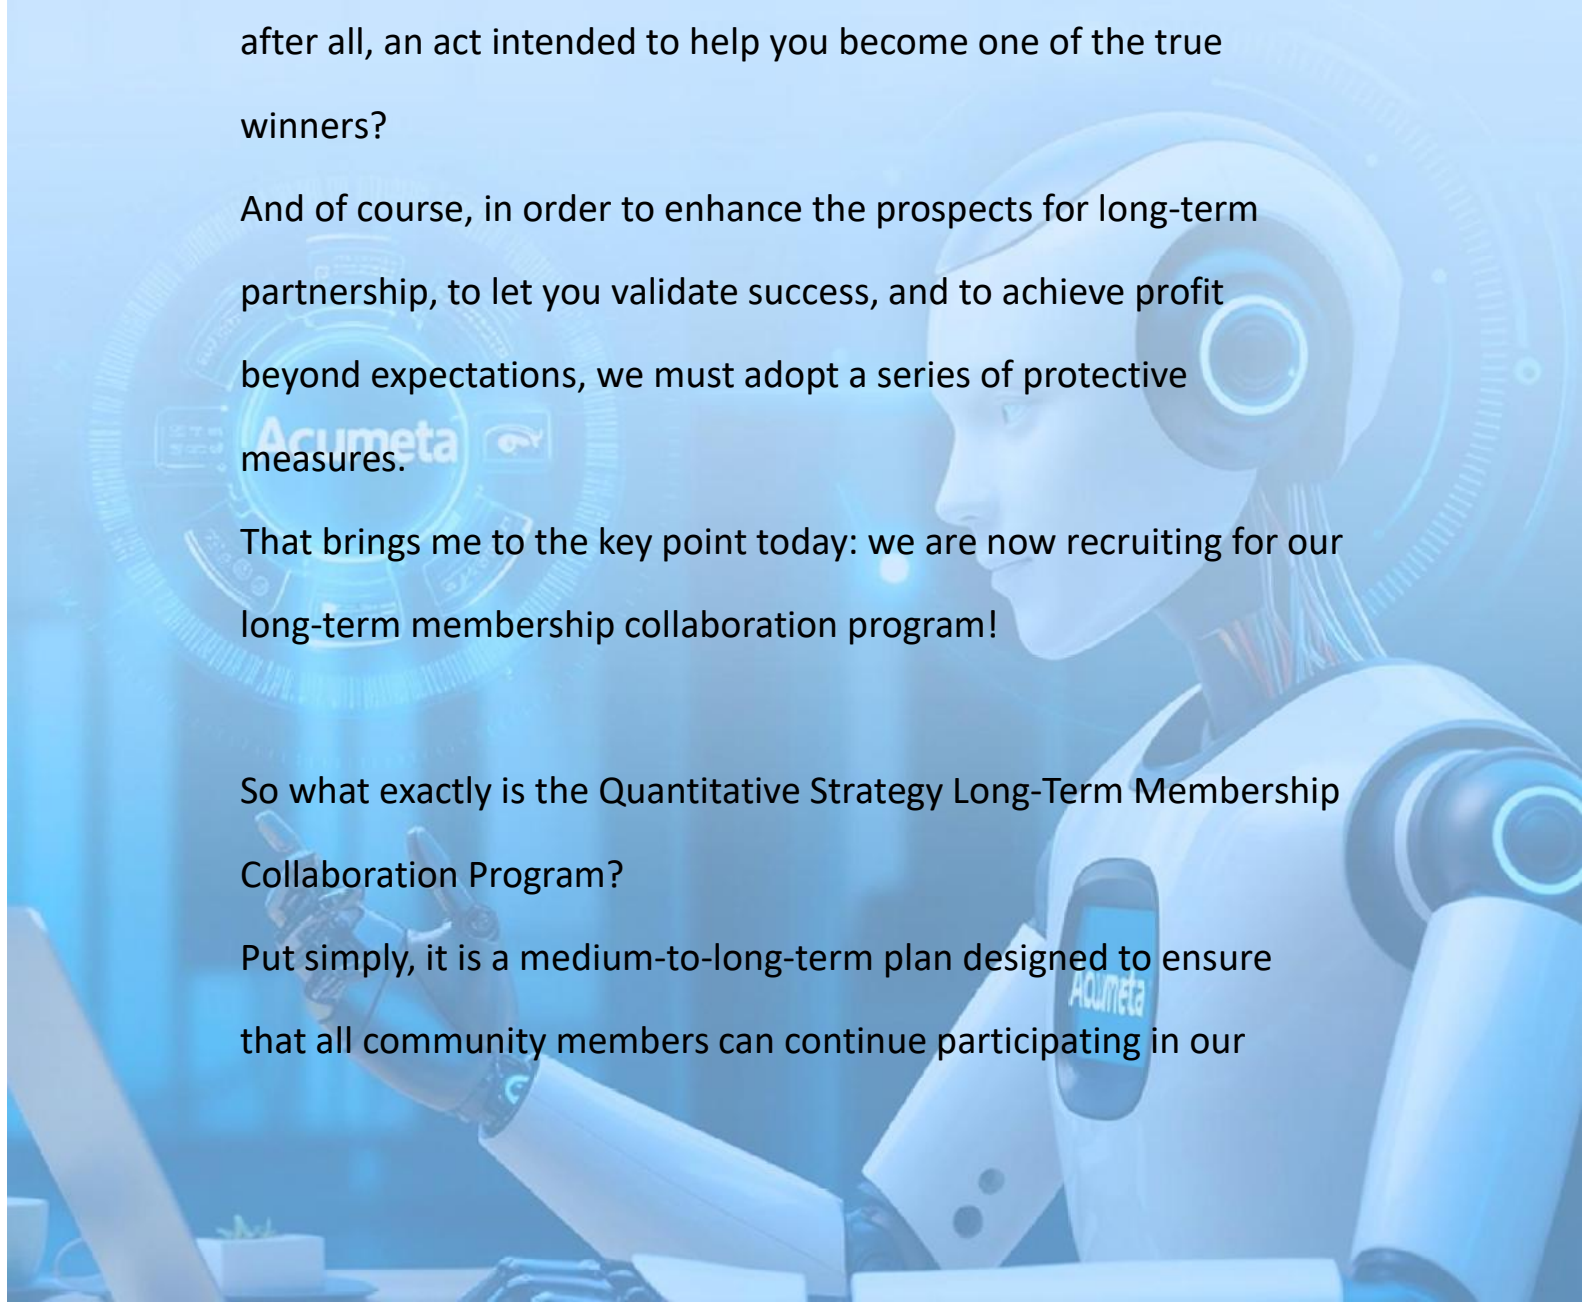

This is why we are actively encouraging community members to participate—backed by forward-looking, reliable analytical standards designed to increase your allocation share. Is that not, after all, an act intended to help you become one of the true winners?

And of course, in order to enhance the prospects for long-term partnership, to let you validate success, and to achieve profit beyond expectations, we must adopt a series of protective measures.

That brings me to the key point today: we are now recruiting for our long-term membership collaboration program!

So what exactly is the Quantitative Strategy Long-Term Membership Collaboration Program?

Put simply, it is a medium-to-long-term plan designed to ensure that all community members can continue participating in our

future suite of quantitative investment strategies.

These strategies encompass equities, crypto, currency surfing, and IPO/token subscriptions—a portfolio of investment ideas.

The goal is to consistently expand the community's profit potential, and to deliver this through a framework of long-term membership collaboration.

By providing high-quality strategic services, we in turn receive fair and satisfactory service compensation.

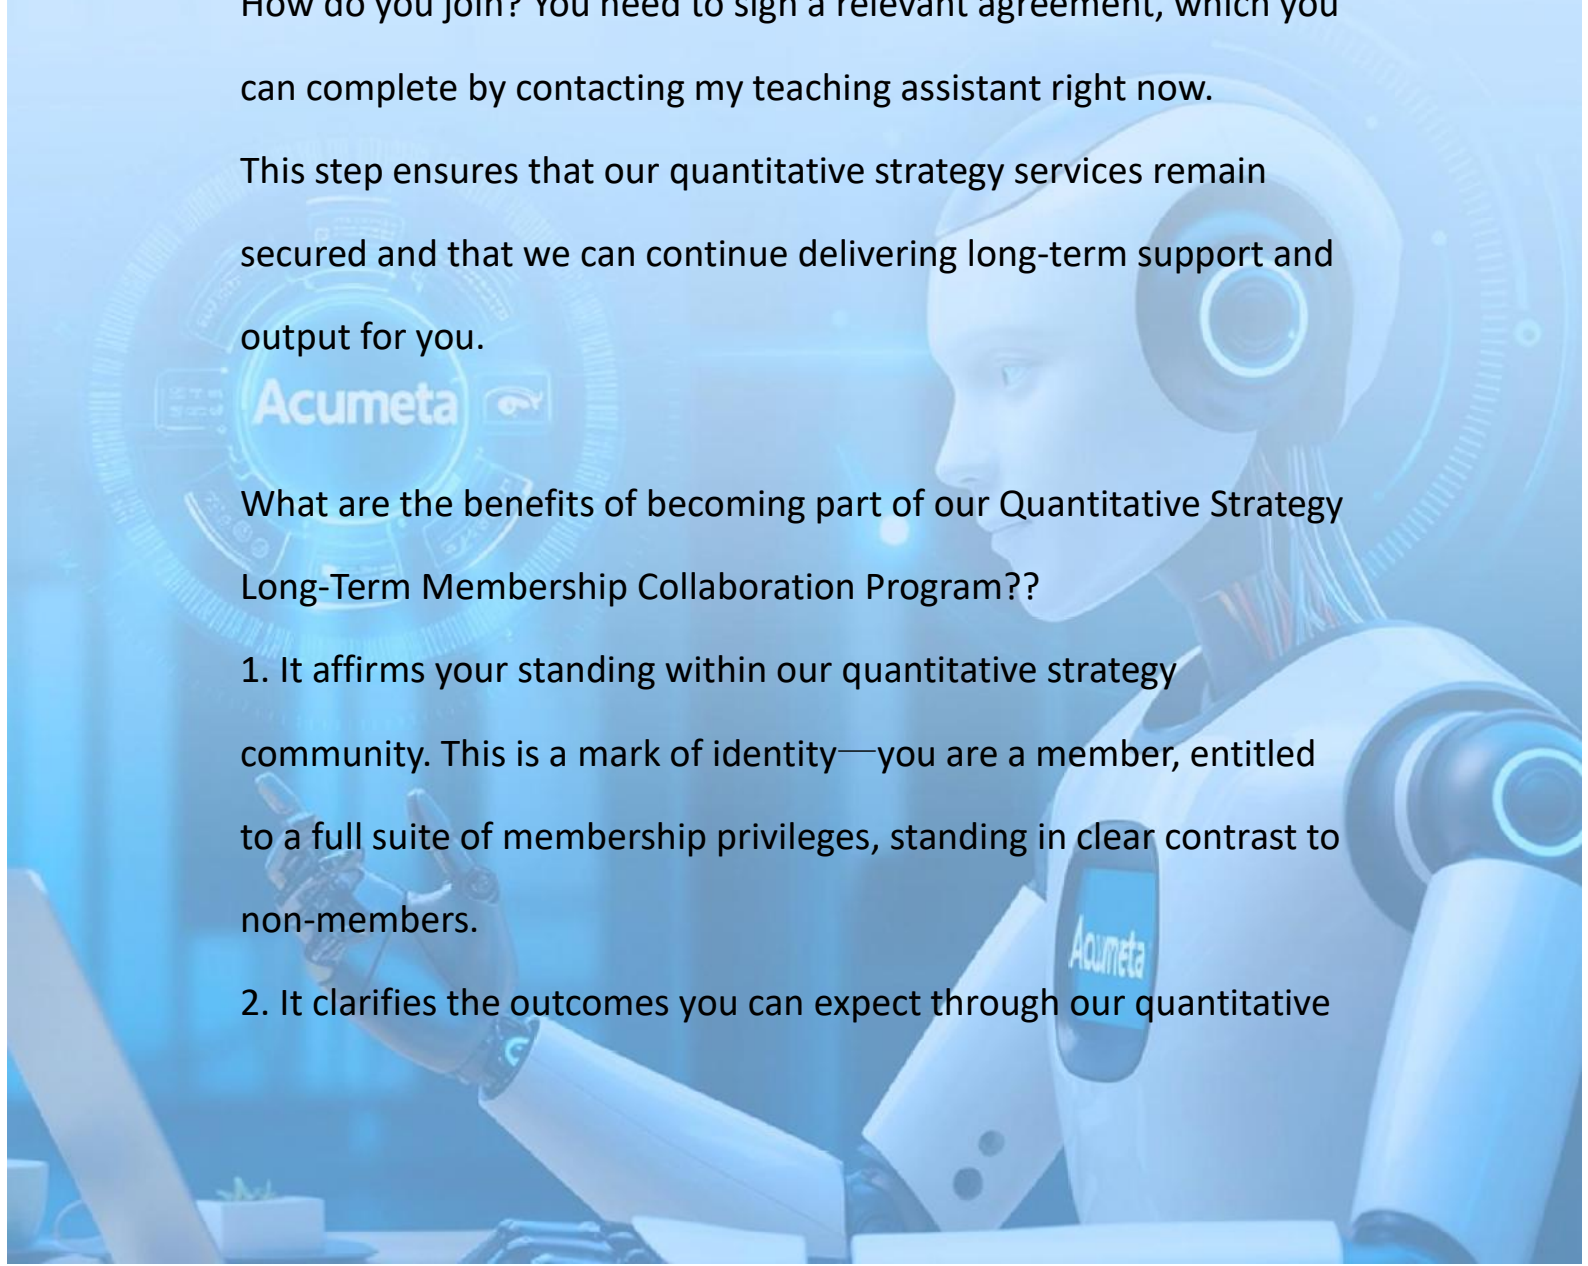

This creates a virtuous cycle of sustainable long-term development.

How do you join? You need to sign a relevant agreement, which you can complete by contacting my teaching assistant right now.

This step ensures that our quantitative strategy services remain secured and that we can continue delivering long-term support and output for you.

What are the benefits of becoming part of our Quantitative Strategy Long-Term Membership Collaboration Program??

1. It affirms your standing within our quantitative strategy community. This is a mark of identity—you are a member, entitled to a full suite of membership privileges, standing in clear contrast to non-members.
2. It clarifies the outcomes you can expect through our quantitative

strategy services. I believe this is the point you care about most. You are not here merely to gain some knowledge from my program, more importantly, you expect these insights and services to be monetized—to become a critical source of appreciation and support in your trading and investment journey.

3. It defines how your profits are realized—cleanly, securely, and with safeguards. This is not about slogans, nor about vague promises; it is spelled out in a real agreement that frames our long-term cooperation and shared expectations.

This is a quantitative service program genuinely designed to make you a true winner in investing.

Right now, for example, through our long-term membership you can increase your allocation ratio in the upcoming BOM subscription.

For full details, please contact my teaching assistant to guide your participation!

The decision signals of FinLogic Quantitative Think Tank Center—whether applied to the BOM subscription or to potential currency surfing signals during this week's Non-Farm Payroll period—are built on the core requirement of the highest standard of secure investment protection, ensuring that our long-term members achieve profits that are both satisfying and reassuring.

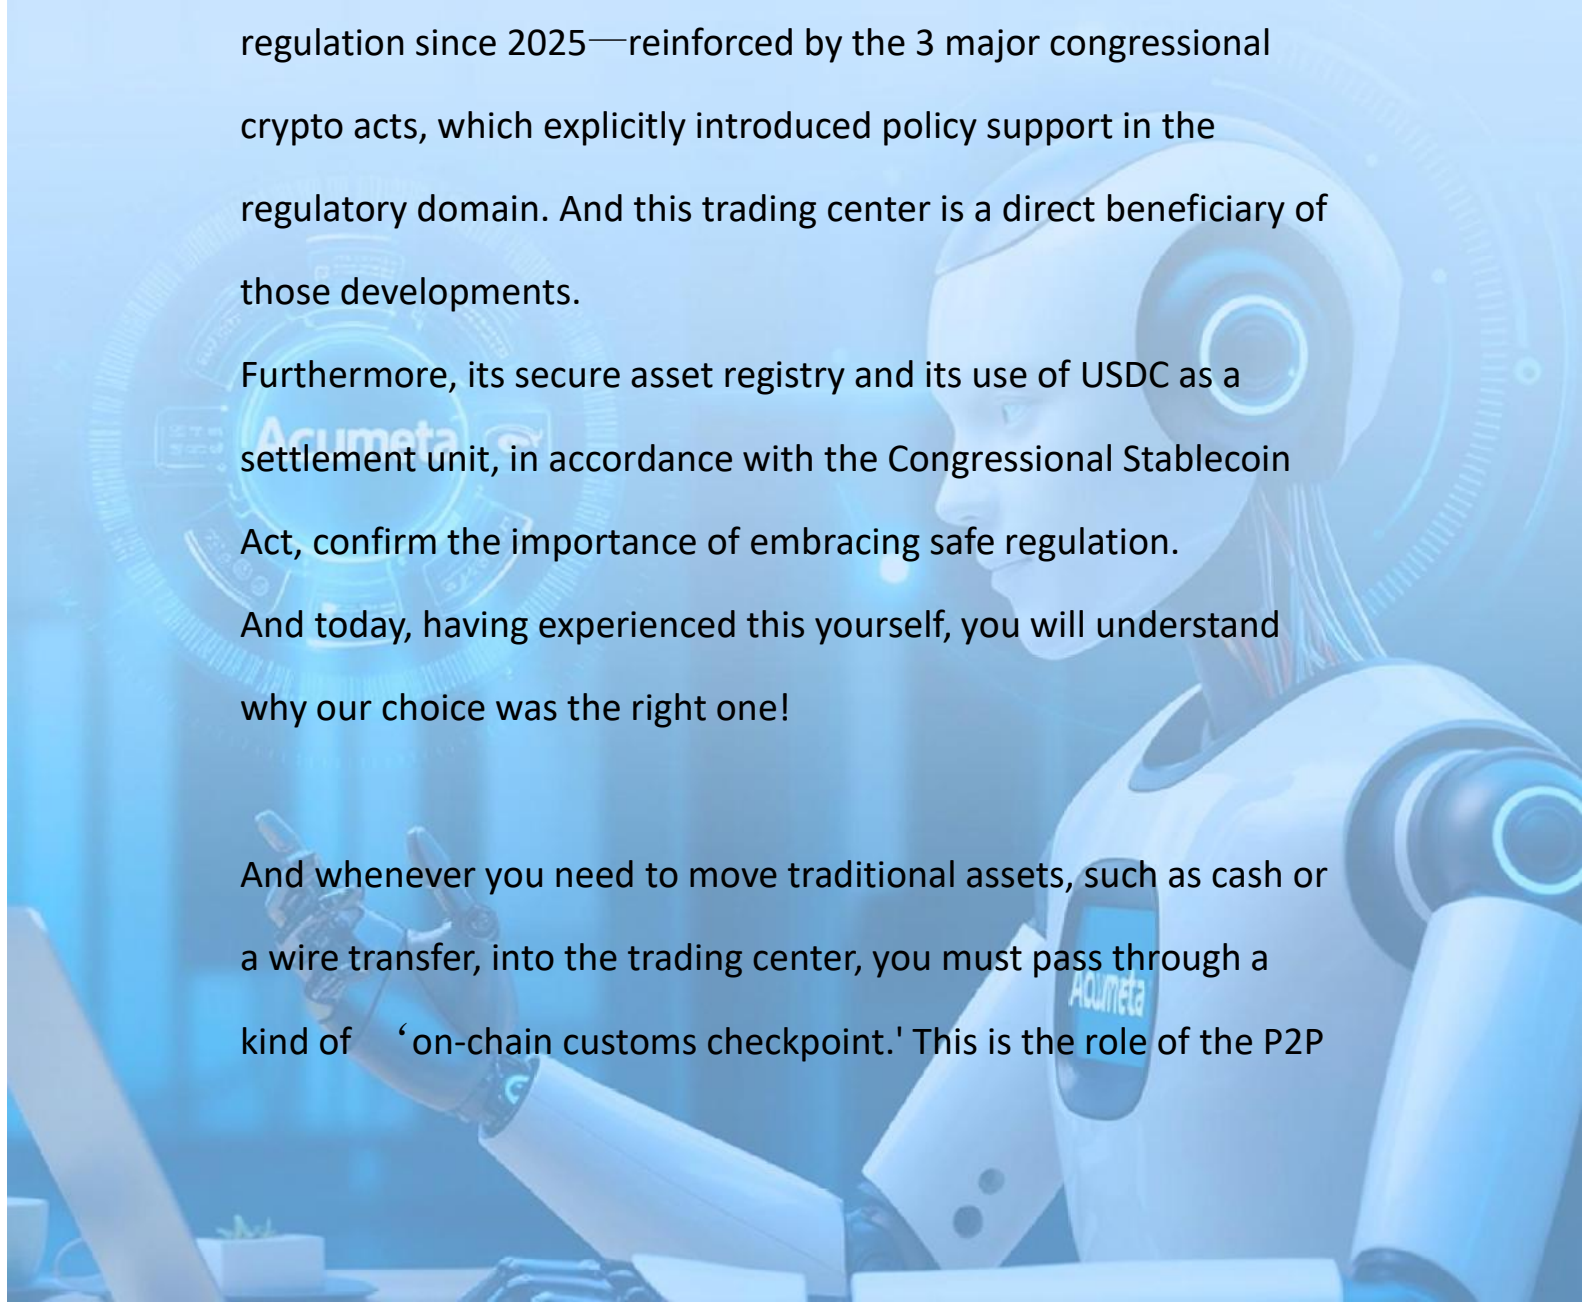

And today, all of us are benefiting from the services of ETHERMAC crypto trading center. Whether it is your tokens, your USDC, your participation in the BOM subscription, or your engagement in currency surfing trades here, you are operating on a platform worthy of your trust.

When you open the trading center, you can see the safeguards clearly outlined in its security center. Its proactive embrace of, and compliance with, MSB regulation marks it as part of the collective celebration of crypto service providers that have embraced regulation since 2025—reinforced by the 3 major congressional crypto acts, which explicitly introduced policy support in the regulatory domain. And this trading center is a direct beneficiary of those developments.

Furthermore, its secure asset registry and its use of USDC as a settlement unit, in accordance with the Congressional Stablecoin Act, confirm the importance of embracing safe regulation.

And today, having experienced this yourself, you will understand why our choice was the right one!

And whenever you need to move traditional assets, such as cash or a wire transfer, into the trading center, you must pass through a kind of ‘on-chain customs checkpoint.’ This is the role of the P2P

certified acceptance merchants.

Certification means that the P2P merchant has passed the trading center's rigorous review and asset verification, and has also deposited collateral. The purpose is simple, to protect our members and ensure that when using a P2P acceptance merchant, you receive secure and reliable service.

Imagine, for example, that you wish to exchange \$300k into USDC through a wire transfer with a P2P acceptance merchant.

The first step is to contact the merchant's official customer service, so you can immediately understand the process and requirements.

The procedure itself is straightforward: you wire your traditional bank funds to the P2P acceptance merchant, and the merchant transfers the corresponding USDC into your trading account.

The speed of the process depends on the efficiency of your bank's wire transfer.

Once your bank executes efficiently, your USDC arrives almost instantly, thanks to the inherent speed of on-chain transfers. I trust you have already experienced that advantage.

Meanwhile, the trading center guarantees your funds and ensures the P2P merchant fulfills its acceptance commitment, secured by the merchant's collateral deposit.

This is what makes the cross-border movement of traditional assets

into on-chain assets both safe and seamless. And once complete, your holdings are fully transformed into on-chain capital.

Have you noticed that the logic of wealth is quietly changing?

In the past, when we spoke of asset allocation, it meant stocks, bonds, gold, cash, and at most, some real estate.

But today, whether or not you care to admit it, on-chain assets have already become an essential allocation for high-net-worth individuals.

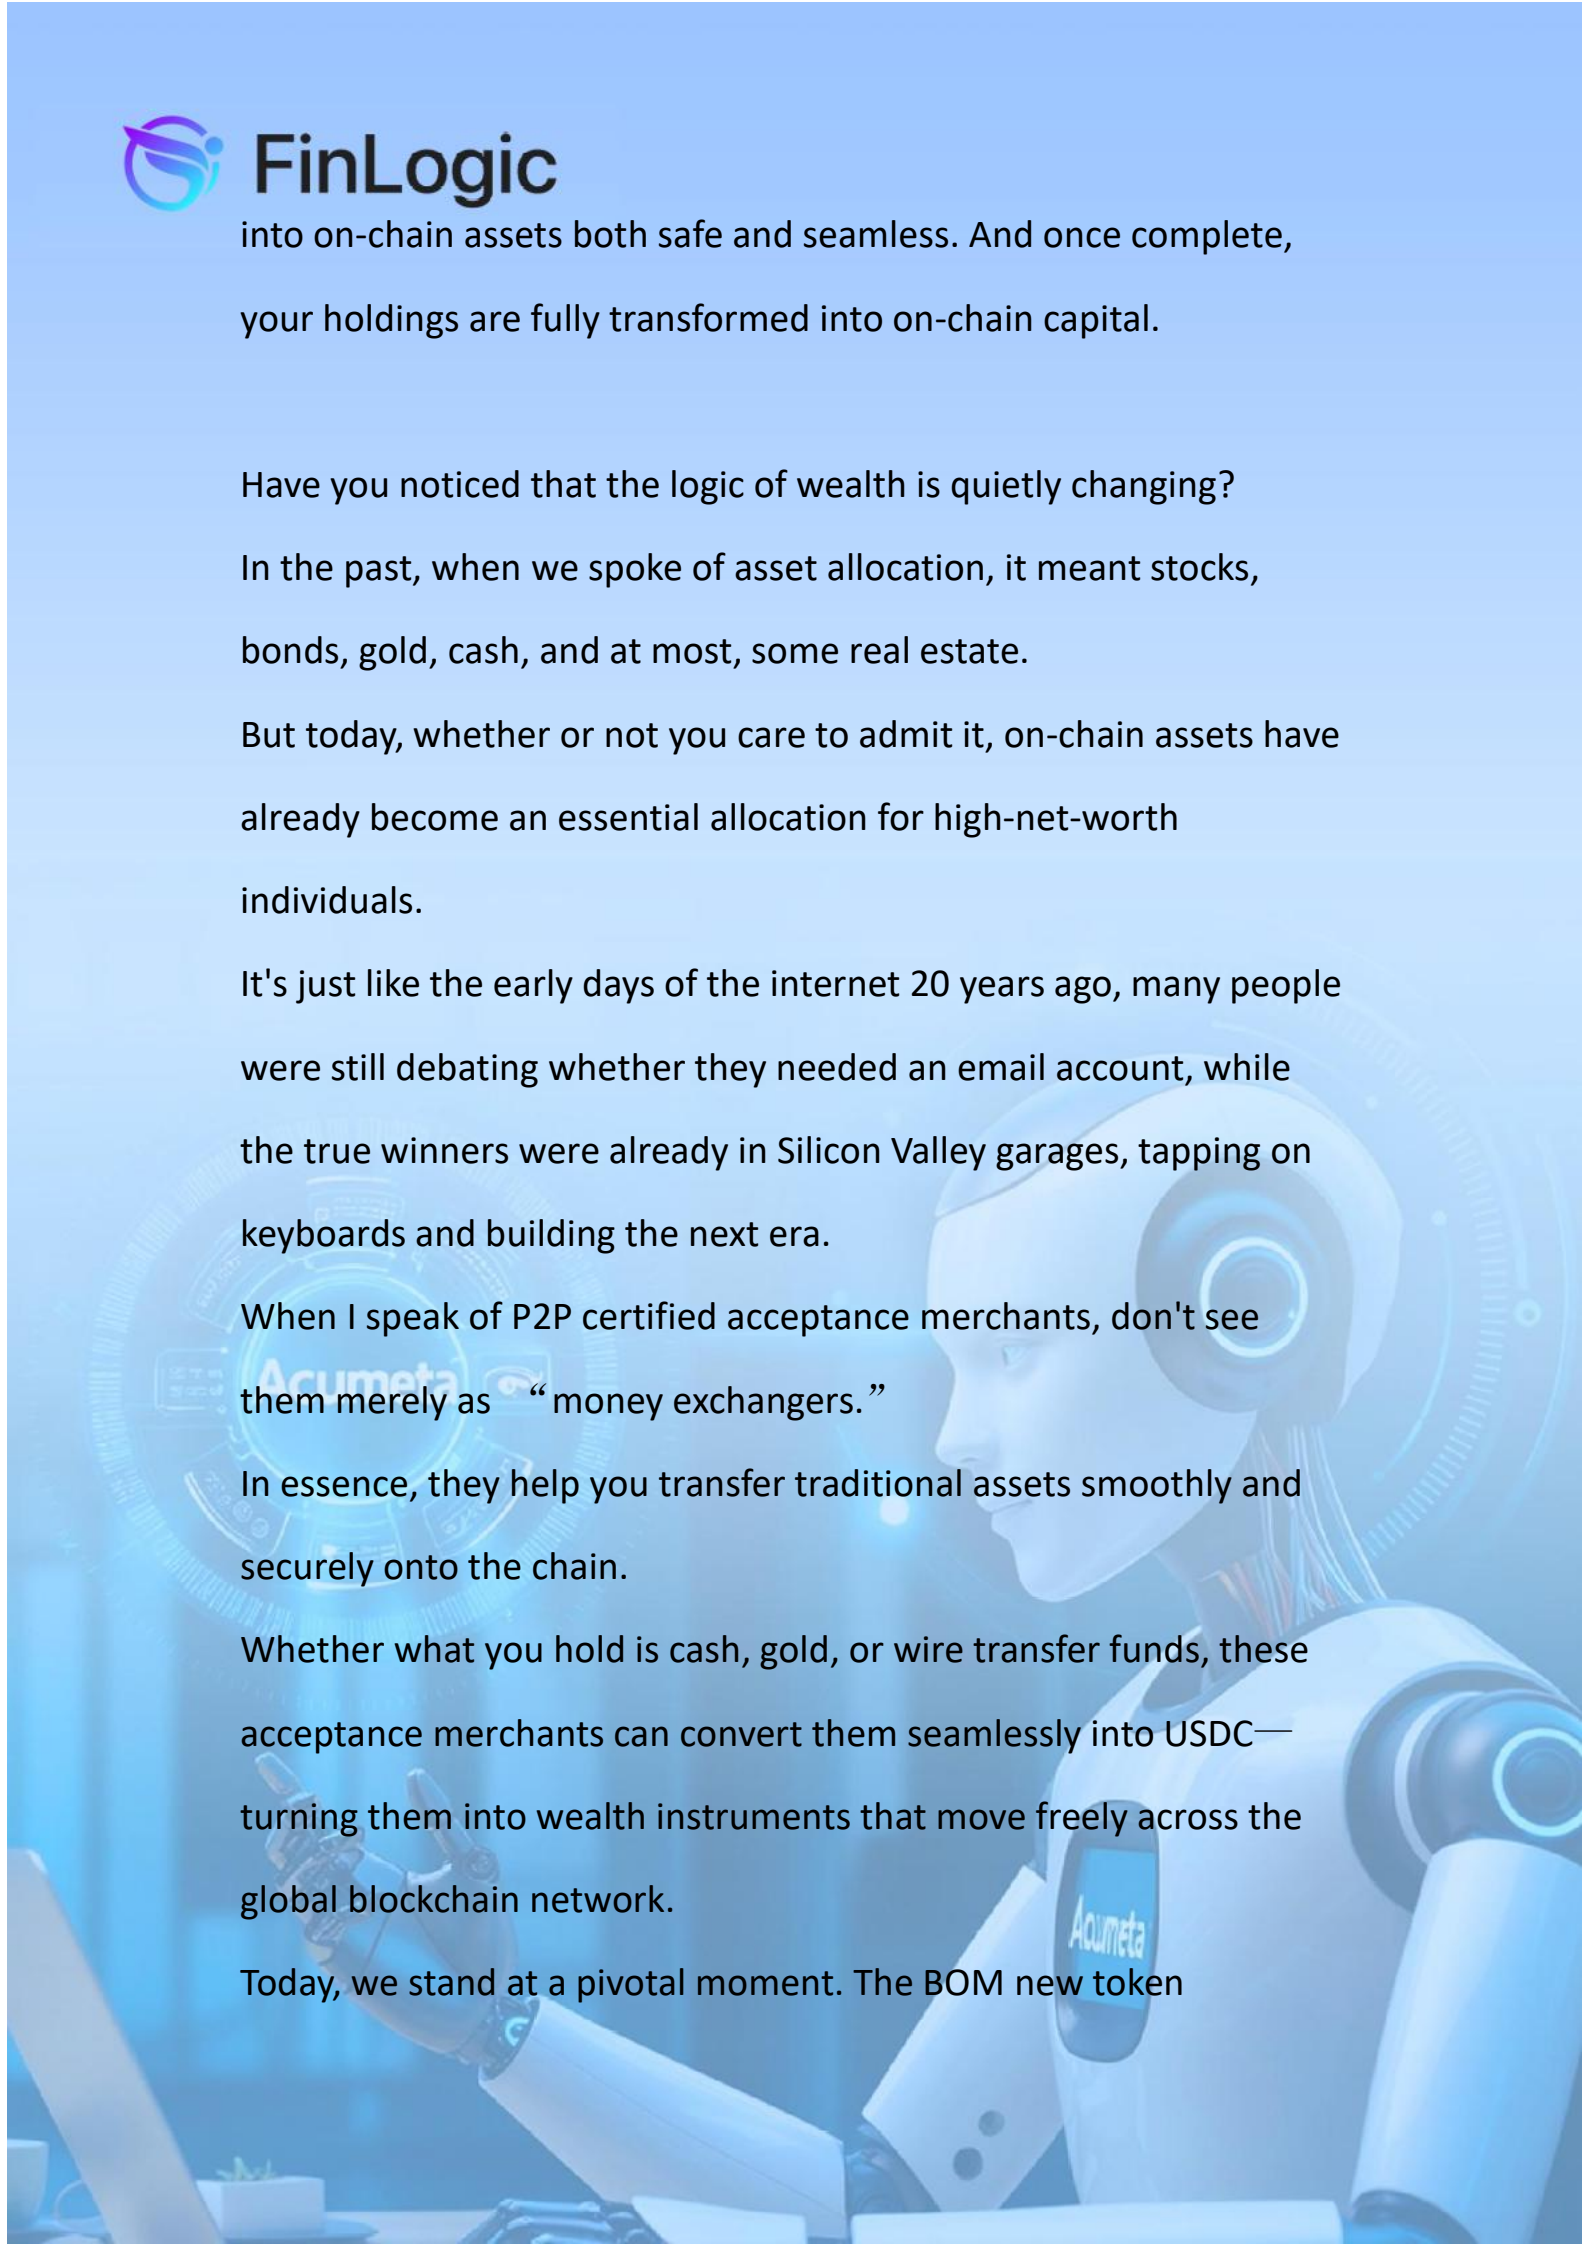

It's just like the early days of the internet 20 years ago, many people were still debating whether they needed an email account, while the true winners were already in Silicon Valley garages, tapping on keyboards and building the next era.

When I speak of P2P certified acceptance merchants, don't see them merely as “money exchangers.”

In essence, they help you transfer traditional assets smoothly and securely onto the chain.

Whether what you hold is cash, gold, or wire transfer funds, these acceptance merchants can convert them seamlessly into USDC—turning them into wealth instruments that move freely across the global blockchain network.

Today, we stand at a pivotal moment. The BOM new token

subscription plan is advancing like a rocket.

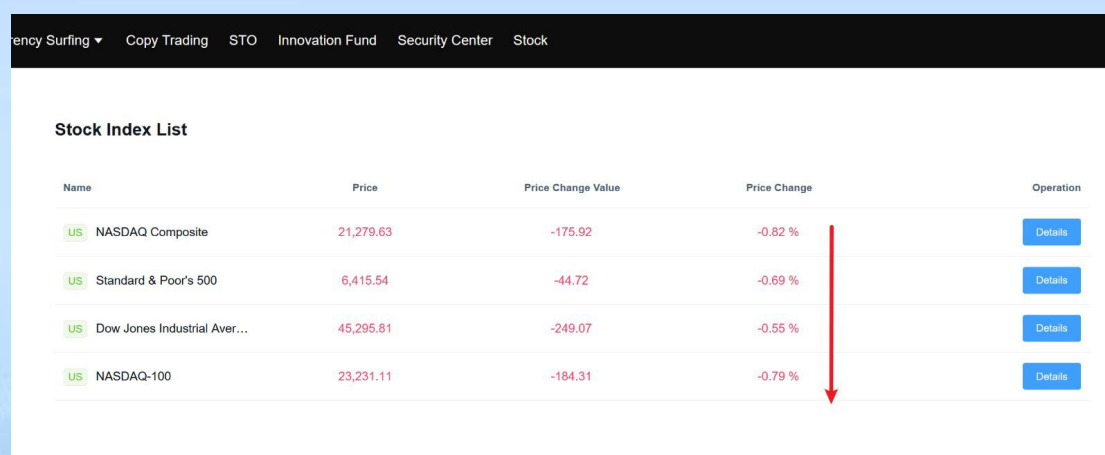

Do you know? Its progress bar is ticking forward, notch by notch.

And as it surges toward 100% completion, you must ask yourself:

Am I the early bird executor—or just a bystander at the door?

It will not wait for you, it will reward those who act decisively in the very first second.

This afternoon, we will continue exploring its value together!

A screenshot of a web application showing a 'Stock Index List'. The interface has a dark navigation bar at the top with links like 'Agency Surfing', 'Copy Trading', 'STO', 'Innovation Fund', 'Security Center', and 'Stock'. Below the navigation bar, the title 'Stock Index List' is displayed. The main content is a table with five columns: 'Name', 'Price', 'Price Change Value', 'Price Change', and 'Operation'. The table lists four stock indices: NASDAQ Composite, Standard & Poor's 500, Dow Jones Industrial Average, and NASDAQ-100. Each row shows a price, a price change value, and a percentage change, all in red, indicating a decline. A large red arrow points downwards from the 'Price Change' column, emphasizing the market's downward trend. Each row also has a 'Details' button in the 'Operation' column.

Name	Price	Price Change Value	Price Change	Operation
US NASDAQ Composite	21,279.63	-175.92	-0.82 %	Details
US Standard & Poor's 500	6,415.54	-44.72	-0.69 %	Details
US Dow Jones Industrial Aver...	45,295.81	-249.07	-0.55 %	Details
US NASDAQ-100	23,231.11	-184.31	-0.79 %	Details

Good afternoon, BOM subscription pioneers:

Welcome to today's session. Did you all enjoy a pleasant Labor Day just past? Barbecues, beer, family gatherings, it all felt wonderful.

But the holiday ended, and Wall Street wasted no time in reminding us of reality. Yes, the stock market tumbled, almost as if the ending had been scripted in advance.

The true investors had already discovered new rules of the game in the midst of this decline.

Why? Because we operate with refined quantitative strategies. That is the difference between seasoned players and ordinary investors.

Where most see a selloff and panic, we see the opportunity to switch lanes across markets.

Now we enter the Q3 sprint. September has always been a critical inflection point for financial markets, and the Federal Reserve's guidance on rate cuts has everyone glued to their screens.

Every turn in monetary policy has historically ignited powerful waves in the crypto world. In past years, those who seized the moment became the winners. And today, we stand once again at just such a threshold.

How will the BOM subscription battle unfold?

This is not a quiet subscription—it is more like a boxing match, with everyone vying for the chance to strike in the very first second.

Remember the lessons AIG taught us about allotment distribution: this time, everyone understands—subscription is not a slow motion exercise. It is a contest of speed and conviction.

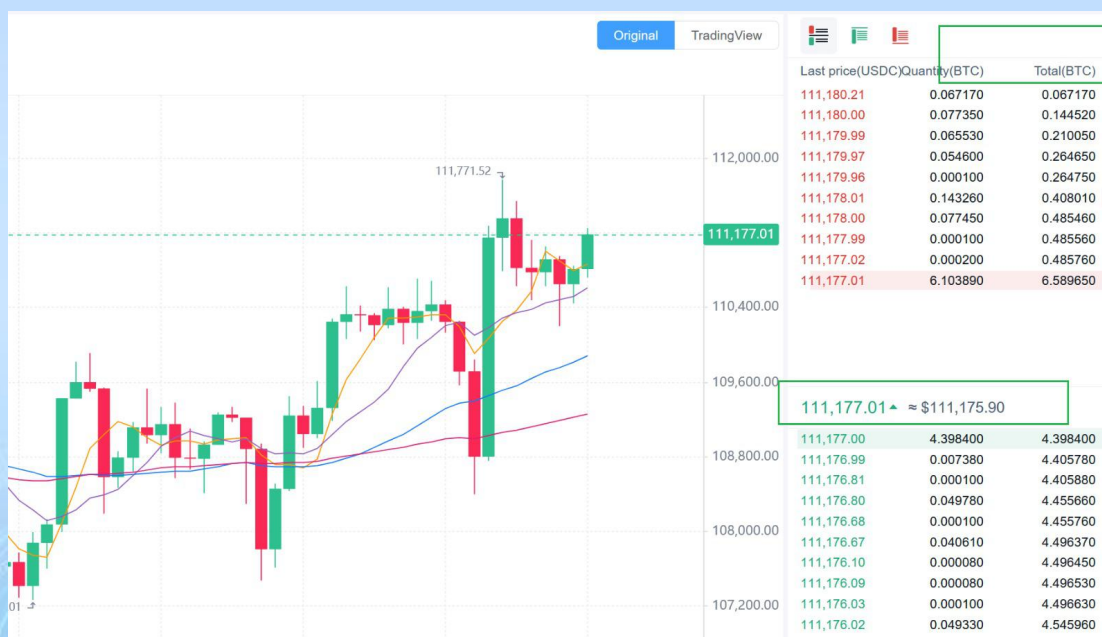

Will BOM achieve 100% success? My answer is simple: not only can it, but it will!

Behind this project stand 6 dimensions of value; coupled with the market's hunger for new tokens, you can almost foresee the moment when the progress bar hits completion, and that glowing “100%” on the screen shines like a diamond.

Do not dismiss this chart, it is not just cold numbers—it is the live cardiogram of on-chain enthusiasm. It tells us who placed their bet in the very first second, who hesitated, and who lunged in at the final moment.

The market will not wait for you—the true winners are always those ready to act in the very first second.

As the chart show, Bitcoin was steadily rising ahead of the market on Tuesday. What force is driving it?

Bitcoin itself is nothing more than lines of code, without a soul. But you, people of experience, wealth, and judgment, know better than anyone that the most valuable things in the world are not the bricks and mortar you can see and touch, but the trust that stands behind them.

And what is the essence of the U.S. dollar? It is just a green piece of

paper, backed by a story of history, a system of credit, and an institutional framework. But what happens when that credit begins to be questioned? When the dollar's supremacy wavers, when people start to doubt the Federal Reserve's independence—whether it is truly safeguarding markets or wavering under political pressure—where does the smart money go? It seeks a new safe harbor. And increasingly, Bitcoin is being recognized as that ‘new harbor.'

In 2020, when the pandemic broke out and the Federal Reserve was frantically printing money while rushing to prop up the markets, I didn't follow the crowd into the so-called ‘recovery rally.' Instead, I allocated part of my assets into Bitcoin.

Bitcoin is not perfect, but it is a currency no one can arbitrarily inflate, and that is the kind of reassurance I wanted.

Bitcoin's strength lies in the rule hard-coded into its protocol: 21 million coins, not one more, not one less.

At a time when U.S. creditworthiness was under constant debate and Treasury yields were whipsawing, Bitcoin displayed remarkable stability. What does that stability signify? That the market was voting with its feet—using real capital to declare to the world: when sovereign credit feels uncertain, the decentralized credit of code

FinLogic

inspires greater confidence.

For high-net-worth individuals, the ultimate priority is not short-term returns, but the peace of mind that lets you sleep soundly. And increasingly, Bitcoin is becoming synonymous with that reassurance.

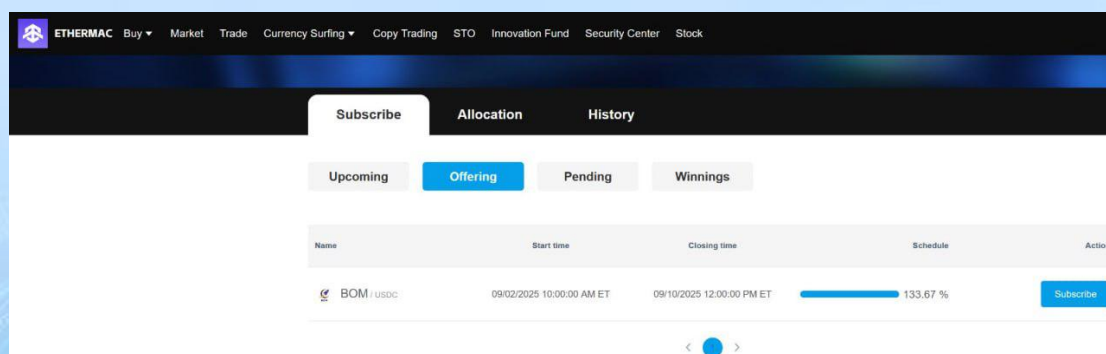

Have you noticed how the U.S. dollar system has become increasingly dependent on the decisions of a few individuals? A handful of rate hikes or cuts by the Federal Reserve can send markets across the world swinging up or down. In other words, your wealth is often not in your own hands, but determined by a few people sitting in a meeting room at the Fed.

Bitcoin follows the opposite logic. It is not dictated by a central banker or a politician, but maintained by a globally distributed

No one can unilaterally change its issuance; no one can secretly alter its ledger.

For those who truly understand the nature of wealth, this quality—unalterable, non-inflationary, beyond control—is the ultimate attraction.

That is why I often say: Bitcoin is a form of stability that belongs to the future. And today, as you begin your own journey into the new era of on-chain assets, do not stop moving forward.

When you shift your capital into on-chain assets, it is not merely about watching Bitcoin appreciate or waiting for September's rate cuts. The real purpose is to capture returns from high-quality projects. That is precisely what the BOM token subscription is about.

Today is Day One. The prime window in the morning has already passed, yet even this afternoon more funds continue to pour in.

This rush to subscribe underscores just how strongly the applications and prospects of the aerospace sector are being

As of now, the BOM subscription progress bar validates my judgment. With the progress already surpassing 110%, it shows that each BOM subscription costs 1 USDC, and the total STO issuance scale is 150 million tokens.

That means over 160 million USDC was subscribed in the morning alone.

Pals, do you see the trend that is unfolding?

When the BOM subscription progress bar shows that it has surpassed 110%, it signifies not only that the early bird subscription effort has already exceeded \$165 million, but also that BOM has met the fundamental requirements for listing.

Under MSB guidelines for STO issuances, once the subscription progress reaches 100%, it confirms that the basic condition of 150 million BOM subscribed has been satisfied.

From this, we can infer, based on the current subscription progress, that the lowest floor for BOM's listing price is $1 \times 1.1 = 1.1$ USDC per token.

This demonstrates that the wave of demand has exceeded expectations, and it underscores the urgency of seizing Day One of the subscription and moving quickly to participate.

Already, the pace of profit generation is proving astonishing.

Pals, on Tuesday afternoon we witnessed, at rocket speed, the emergence of BOM's potential as a profit-generating investment.

Are you still hesitating?

Across the globe, on-chain investors are pressing forward with their early bird subscription plans, turning this into an enviable act of capital allocation. And all of them are striving to secure the largest possible share of allotments.

But what about you?

Have you acted?

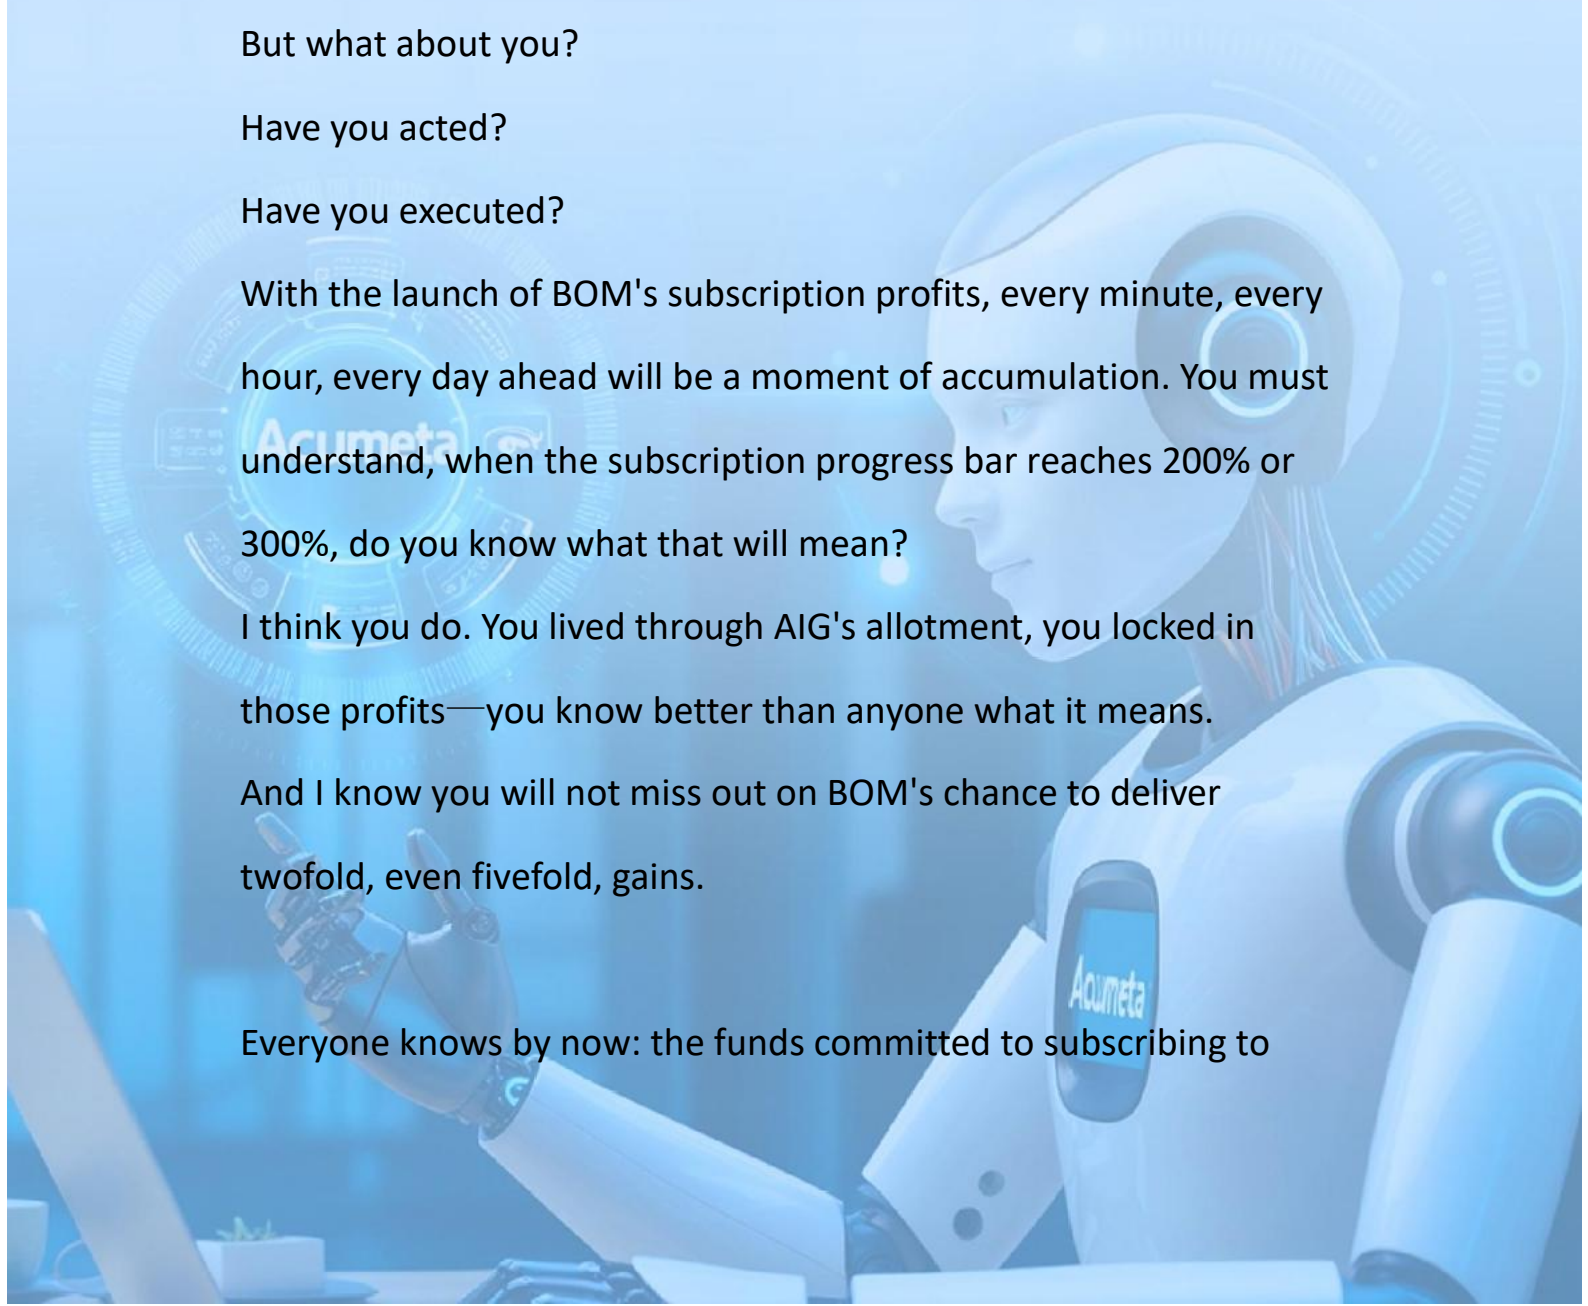

Have you executed?

With the launch of BOM's subscription profits, every minute, every hour, every day ahead will be a moment of accumulation. You must understand, when the subscription progress bar reaches 200% or 300%, do you know what that will mean?

I think you do. You lived through AIG's allotment, you locked in those profits—you know better than anyone what it means.

And I know you will not miss out on BOM's chance to deliver twofold, even fivefold, gains.

Everyone knows by now: the funds committed to subscribing to

BOM carry no risk of loss. This contest exists solely to compete for allotments.

And this competition is worry-free, forward-looking, and fully transparent!

When your principal is secure in the subscription process, there is no reason to take a back seat in this race. We must act with initiative, drawing on the wisdom of past cases and experiences.

Subscribe at the fullest level you can. For example: if you are capable of subscribing for 1 million units, never settle for 300k; if you can commit 200k, do not limit yourself to 20k.

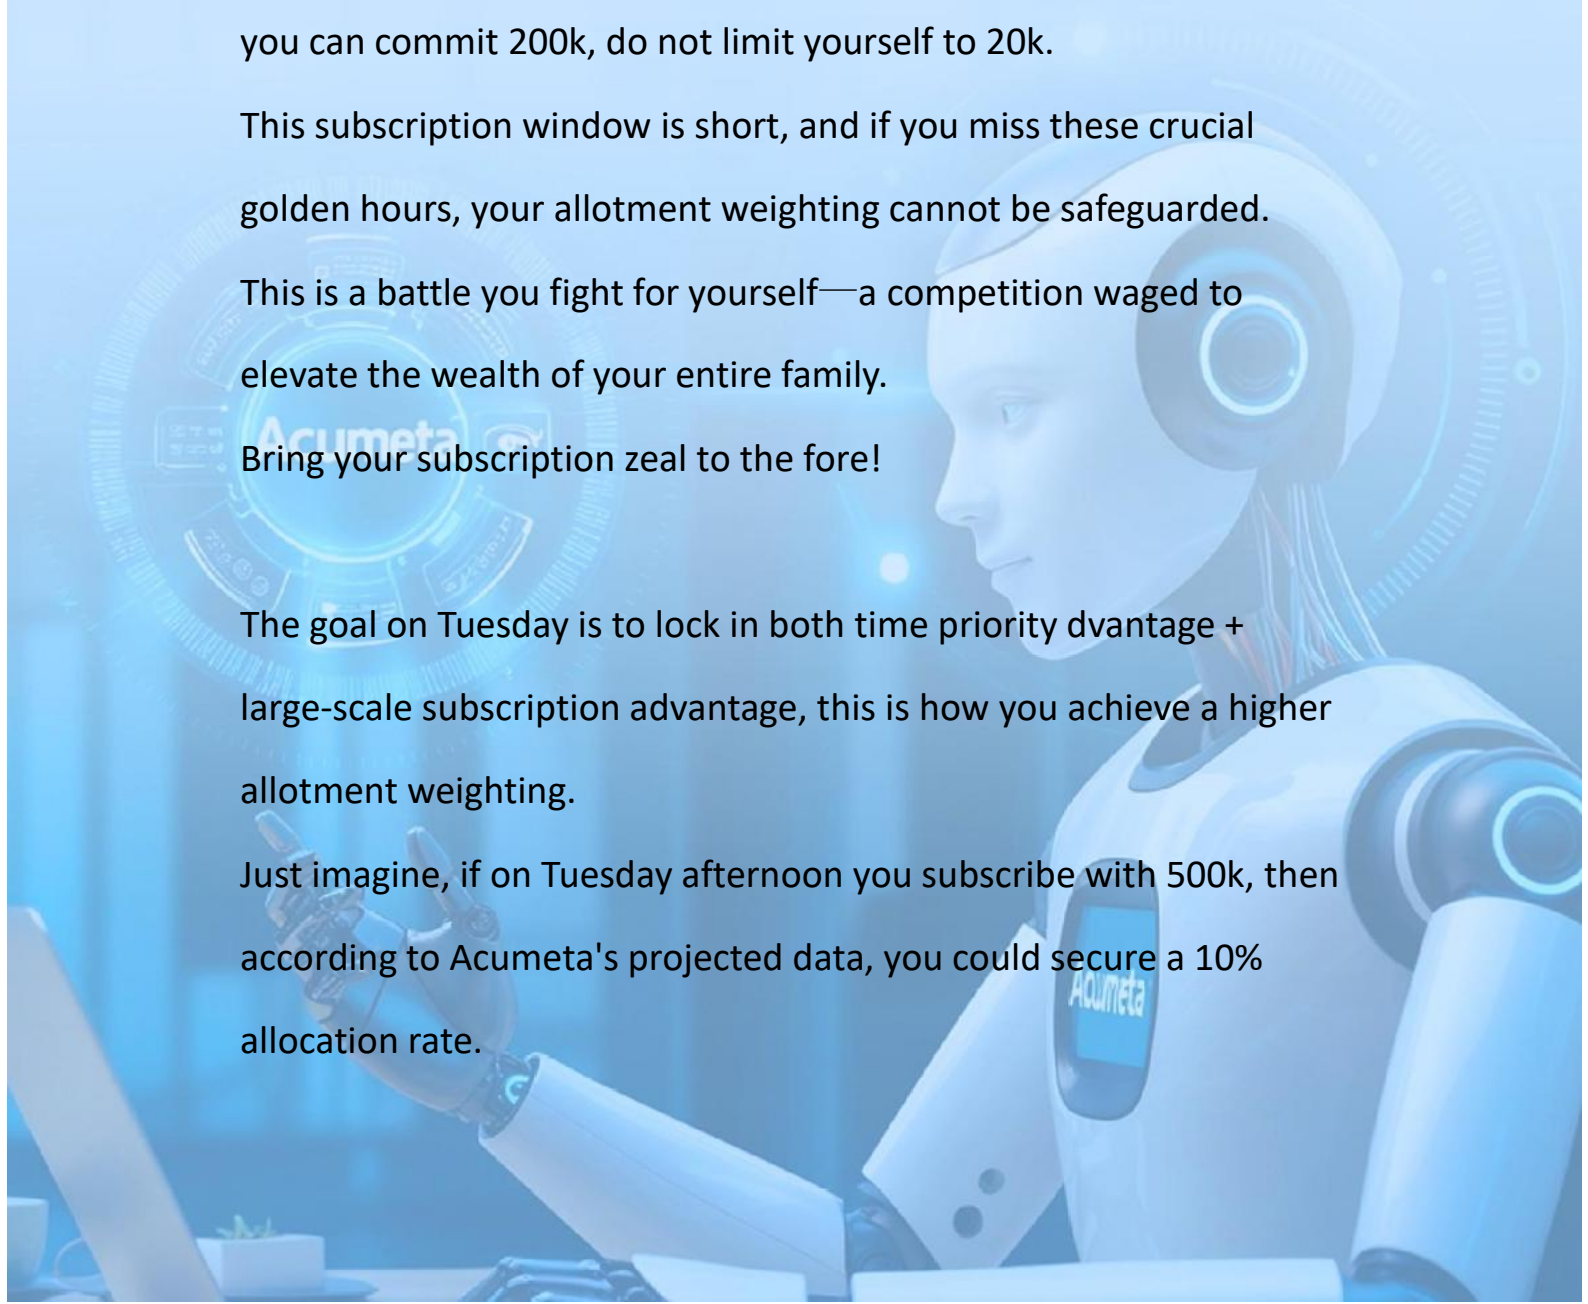

This subscription window is short, and if you miss these crucial golden hours, your allotment weighting cannot be safeguarded.

This is a battle you fight for yourself—a competition waged to elevate the wealth of your entire family.

Bring your subscription zeal to the fore!

The goal on Tuesday is to lock in both time priority dvantage + large-scale subscription advantage, this is how you achieve a higher allotment weighting.

Just imagine, if on Tuesday afternoon you subscribe with 500k, then according to Acumeta's projected data, you could secure a 10% allocation rate.

And once BOM's subscription progress shows profits exceeding 500%, what does that mean for your returns?

$500,000 \times 0.1 = 50,000$ allotted tokens.

50k in profit: $50,000 \times 5 = \$250,000$! By choosing this subscription strategy, you stand to earn no less than a quarter of a million dollars in profit.

But if you hesitate, if you wait until Thursday or Friday to join, what then?

But the outcome could be very different. With the same 500k subscription funds, if you choose to enter later, then according to the allocation weighting rules, your estimated allocation ratio may drop to only 6%.

That would mean just 30k allotted tokens.

With the same profit calculation, $30,000 \times 5 = \$150,000$.

Well, the profit you end up with is clearly far less than what someone who subscribed earlier would make!

Given the same information and the same investment project, why would you choose to be the laggard?

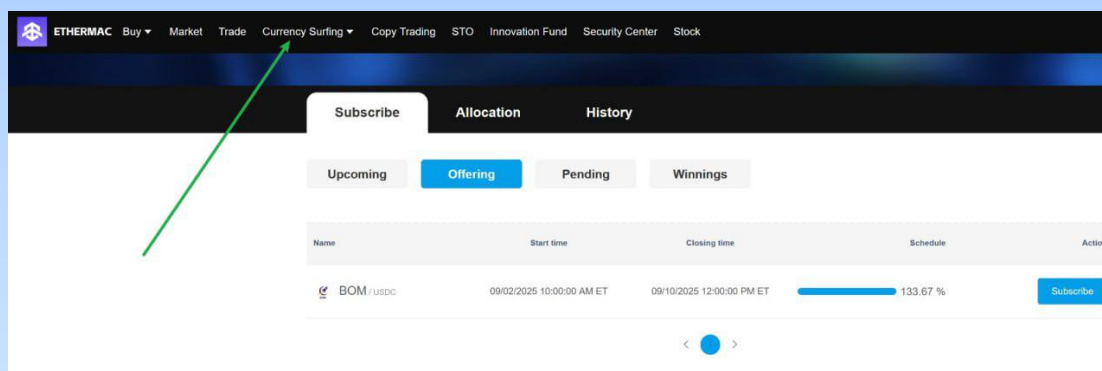

Why settle for being the one who earns less?

We Americans are the embodiment of heroes, we never allow ourselves to fall behind in competition. We choose stronger

performance, and better return strategies. Do you understand, pal?

Be the one who acts earlier with a large-scale BOM subscription—the doer, the executor!

Of course, if you've completed today's first-moment subscription as an early bird executor for BOM,

does that mean our crypto on-chain activity comes to an end?

No, absolutely not!

In your account at ETHERMAC crypto exchange, as shown in the chart, there are many trading sections, and STO projects are just one of them!

Another crowd favorite is [currency surfing].

So what kind of investment and trading section is this?

Put simply, it allows you to combine BOM subscription with trading as part of a portfolio strategy! For example, a 70% subscription and 30% trading allocation.

To illustrate: if you deposit 1,000,000 USDC, you could put 700k into the subscription plan, and then use 300k for [currency surfing]. This greatly enhances your capital liquidity.

Currency surfing, literally, it means riding the waves to capture the thrill of trading profits.

But unlike the BOM subscription, which is entirely risk-free, it does carry a degree of volatility. Just like real surfing, you might fall into the water, but it won't expose you to major risks, because we have a full set of protective measures in place to safeguard you.

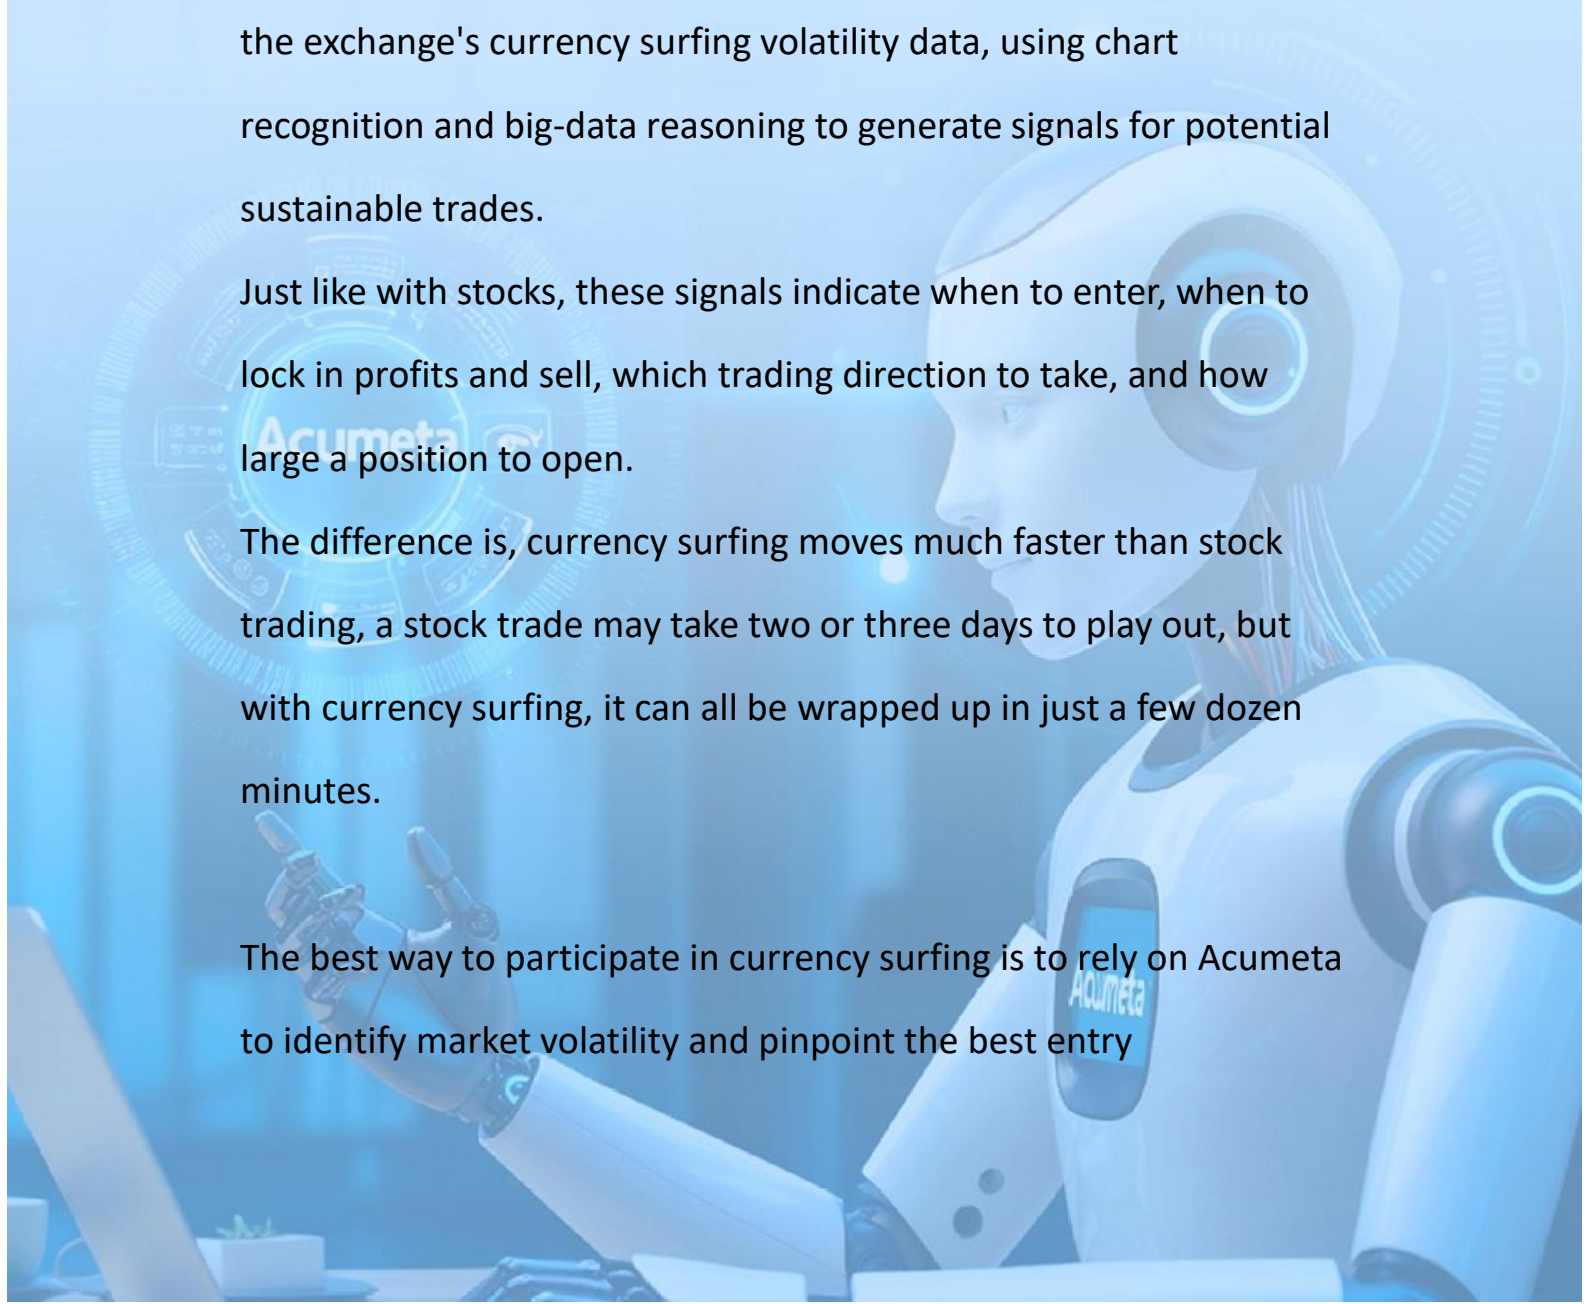

At the core of this protection is Acumeta.

As a quantitative investment system, its responsibility is to monitor the exchange's currency surfing volatility data, using chart recognition and big-data reasoning to generate signals for potential sustainable trades.

Just like with stocks, these signals indicate when to enter, when to lock in profits and sell, which trading direction to take, and how large a position to open.

The difference is, currency surfing moves much faster than stock trading, a stock trade may take two or three days to play out, but with currency surfing, it can all be wrapped up in just a few dozen minutes.

The best way to participate in currency surfing is to rely on Acumeta to identify market volatility and pinpoint the best entry

opportunities.

If you try to monitor the market manually, chances are you'll miss these trades simply because of the time and energy it requires.

This is where the quantitative system comes in, it provides precise trading signals and risk safeguards, greatly reinforcing the profit protection I can offer to my long-term members.

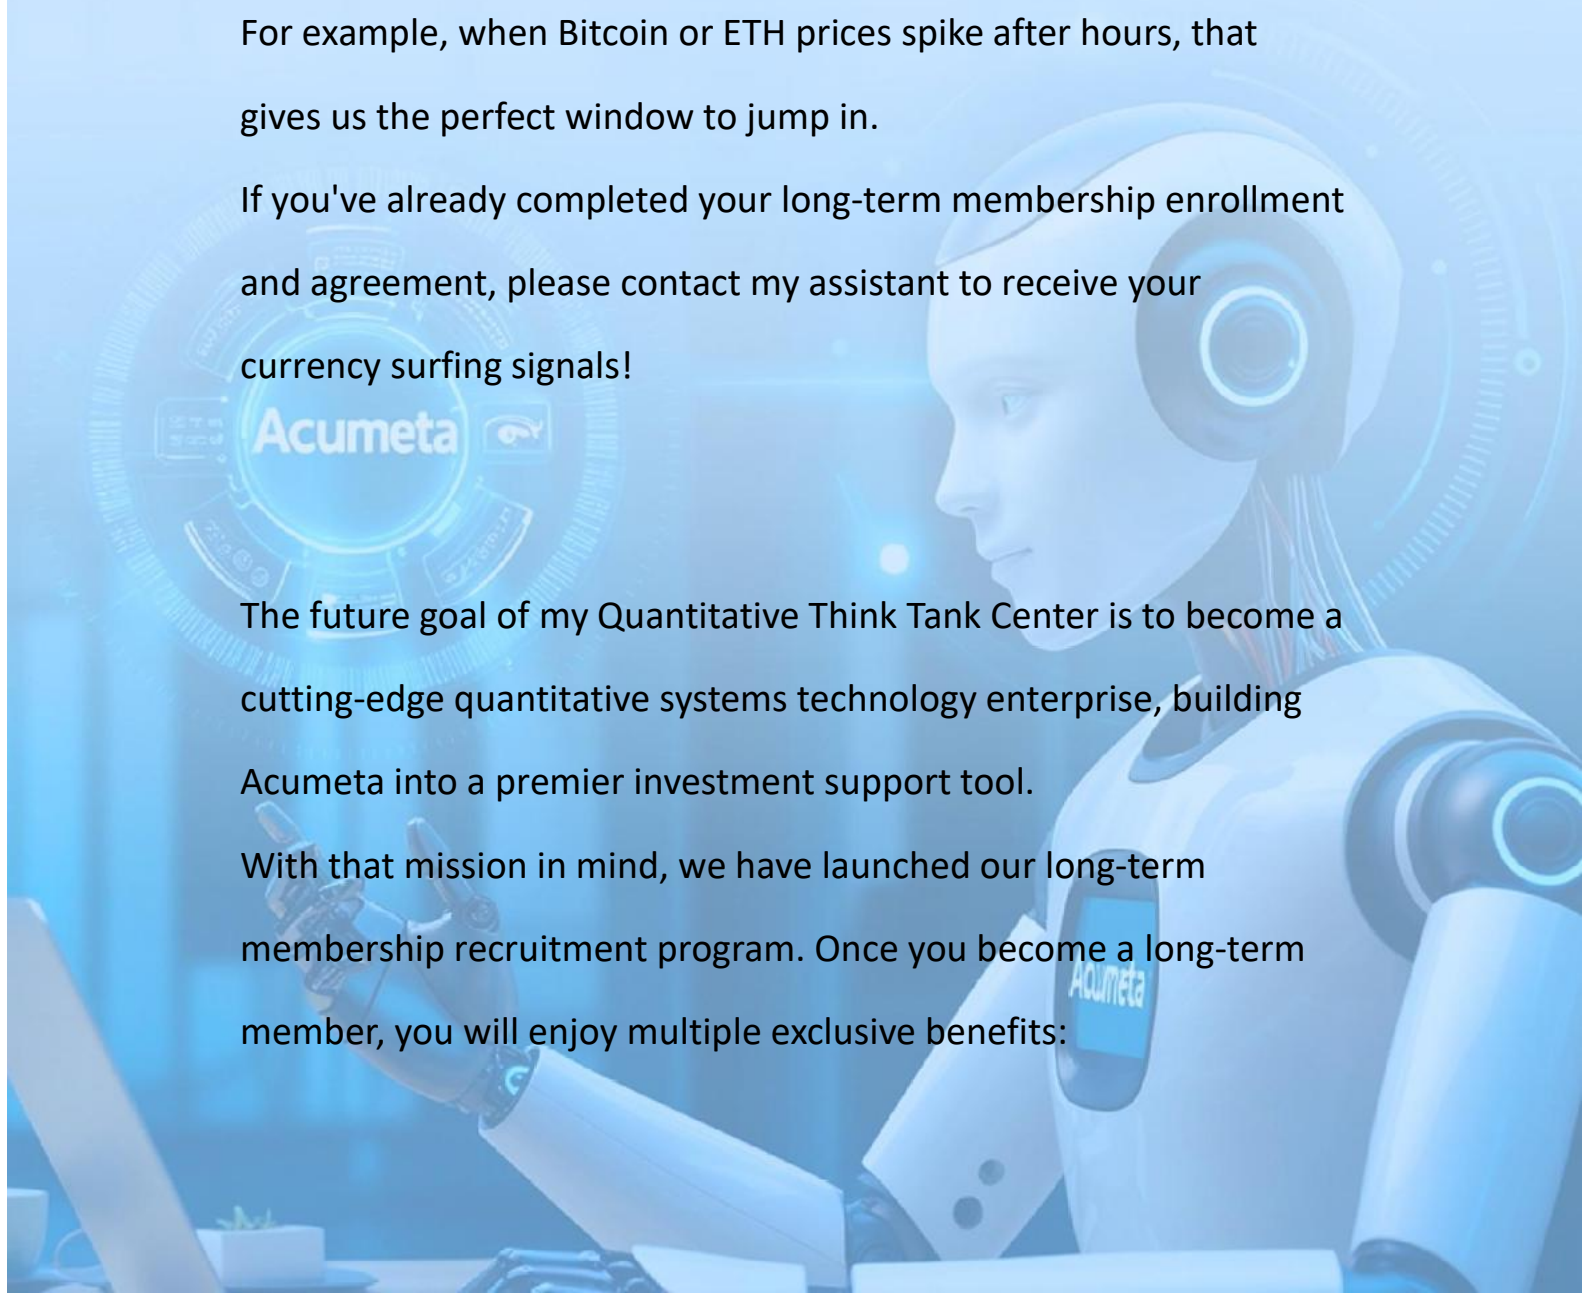

That way, once your funds are fully prepared, your trading cycle in [currency surfing] can be dramatically shortened, allowing you to capture short-term profits like a true winner!

For example, when Bitcoin or ETH prices spike after hours, that gives us the perfect window to jump in.

If you've already completed your long-term membership enrollment and agreement, please contact my assistant to receive your currency surfing signals!

The future goal of my Quantitative Think Tank Center is to become a cutting-edge quantitative systems technology enterprise, building Acumeta into a premier investment support tool.

With that mission in mind, we have launched our long-term membership recruitment program. Once you become a long-term member, you will enjoy multiple exclusive benefits:

1. Access to real-time trading signal alerts for currency surfing.
2. Institutional-level allocation share in the BOM new token subscription.
3. Participation in long-term profit protection strategies.
4. An exclusive community identity key, giving you personalized, members-only quantitative strategy customization.
5. Priority status as one of the first users when Acumeta goes public worldwide this December, along with early bird rewards.
6. Inclusion in the Quantitative Think Tank Center's token incubation support program, allowing long-term members to share in the company's growth dividends at all times.

Therefore, as long as you complete your BOM subscription today, the next round of currency surfing opportunities will surely deliver you even greater profit expansion.

You don't need to wait for BOM's final results, every single day gives you the chance to accumulate new gains!

The significance of BOM's first day of subscription has never been about “just clicking a few buttons.” It's about seizing a prime front-row seat. And that's not some vanity label, it's the critical factor that determines your allocation ratio.

THE ADVANTAGES OF FIRST-MOVER

EARLY-BIRD SUBSCRIPTION FOR BOM

It's like being at an NBA Finals game, front row seats don't just let you clearly see the sweat and moves of the players, they let you feel the passion and energy that only the live arena can deliver. In the BOM world, sitting in the front row means locking in advantages early and boosting your odds of wealth appreciation.

I still remember the 2000 NBA Finals, when my good friend and I spent over ten thousand dollars to watch the Lakers play at home. We sat in the front row, and when Kobe took free throws right in front of us, we could even hear the rhythm of his breathing.

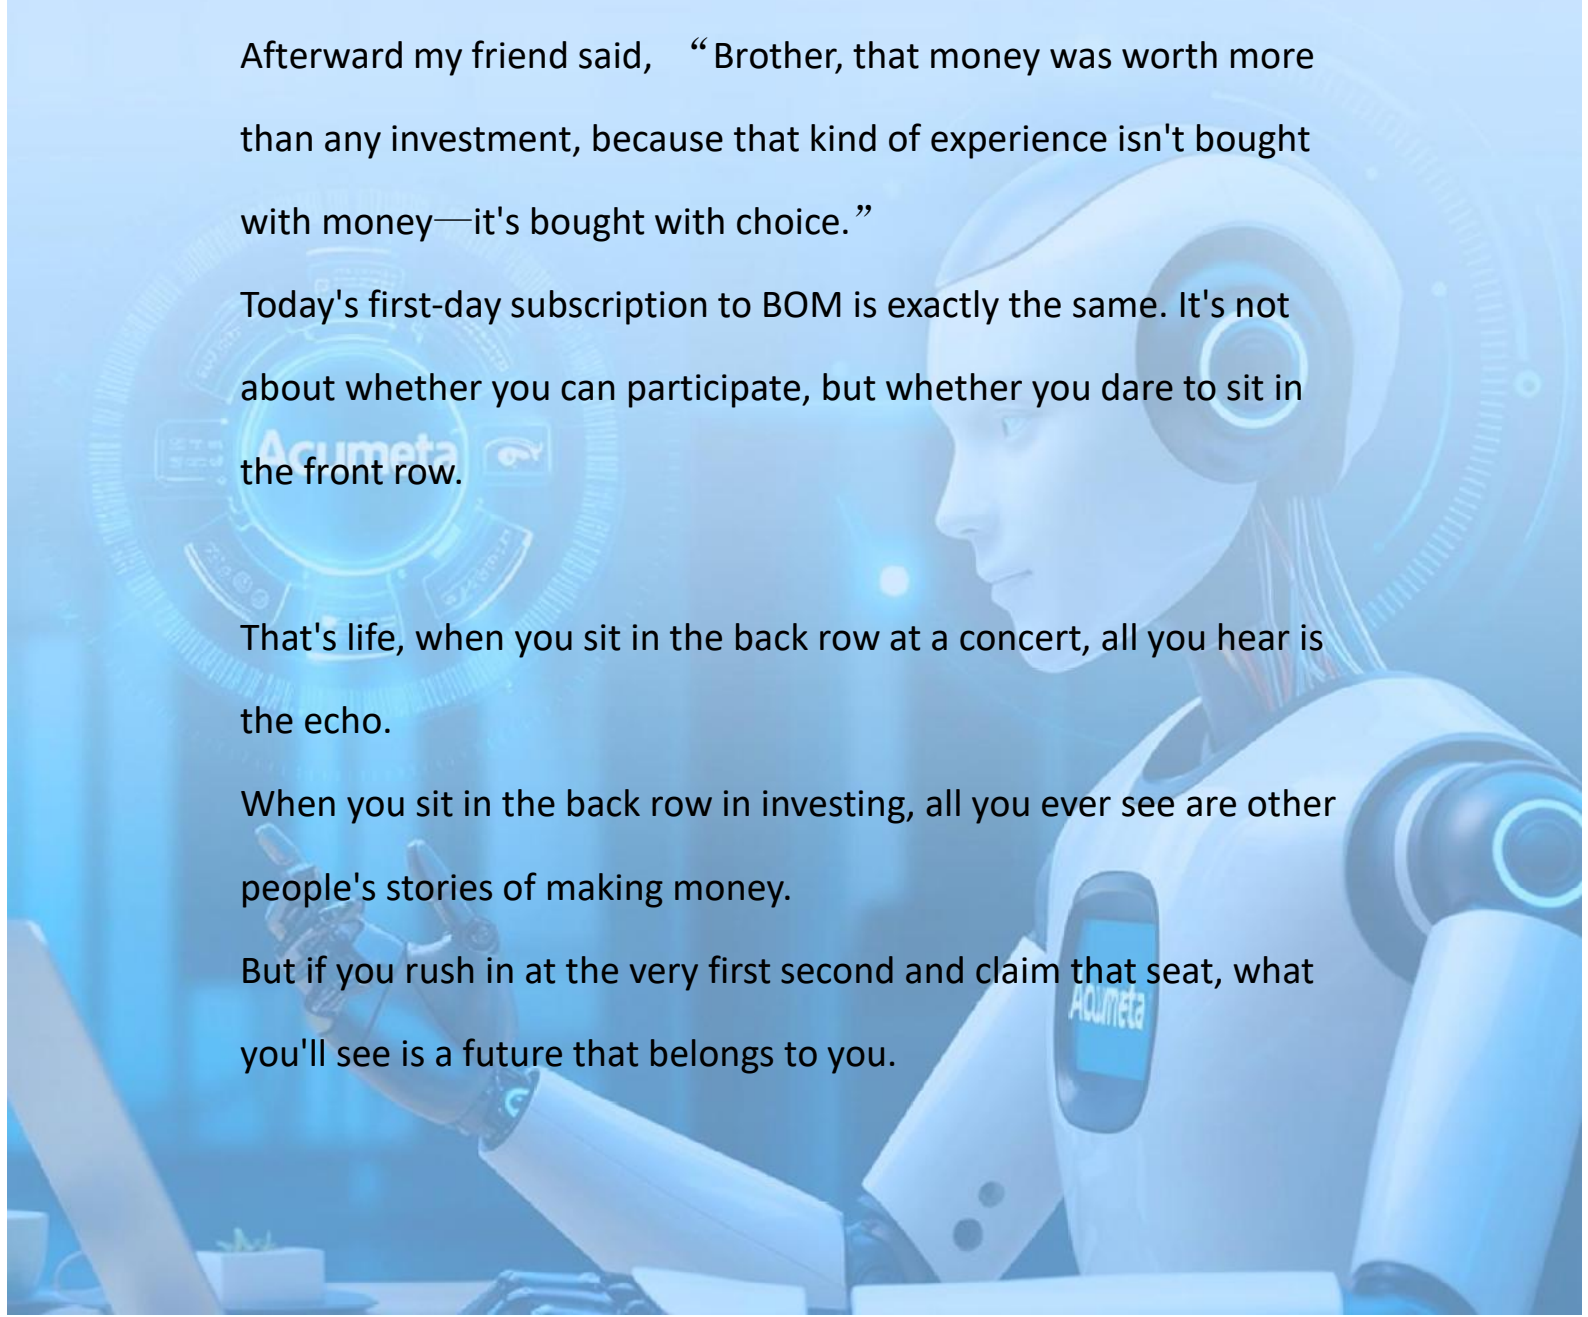

Afterward my friend said, “Brother, that money was worth more than any investment, because that kind of experience isn't bought with money—it's bought with choice.”

Today's first-day subscription to BOM is exactly the same. It's not about whether you can participate, but whether you dare to sit in the front row.

That's life, when you sit in the back row at a concert, all you hear is the echo.

When you sit in the back row in investing, all you ever see are other people's stories of making money.

But if you rush in at the very first second and claim that seat, what you'll see is a future that belongs to you.

The game of wealth isn't about who's the smartest, it's about who can move half a step faster at the decisive moment. Half a step ahead, and you get to enjoy the main course; half a step late, and you won't even taste the soup.

If you've already completed your BOM subscription today, don't stop there. Contact my assistant right away to get your customized Acumeta “currency surfing signals.”

Our mission is to make sure you don't waste a single second in the doldrums.

Acumeta's role is this: when things seem unclear to you, it helps you catch the most perfect wave

Pals, let me close today's program with this:

The front row always belongs to those who act early. The choice is in your hands—don't let your future self say, “I had the chance.”

See you Wednesday!
