

FinLogic

Friday, Sep 26, 2025

Pals, welcome to our Quantitative Winners Legion Friday moment!

After Thursday's wave of declines, did it feel like your nerves was on a roller coaster? Don't worry, markets never show only a cold, ruthless face, at the next turn, they always toss in a surprise. Today, that surprise came from the PCE data coming in right on target, extending last month's performance: neither overheated nor sluggish, like a perfectly brewed Americano, not scalding hot, but just strong enough to wake you up.

What signal does this send? It's simple: inflation hasn't spread!

If inflation were a runaway horse, charging full speed, the Fed would have to raise its big stick of rate hikes and beat the market's enthusiasm back down.

But that's not the picture today. The horse is still on the field, but it

has quieted down, its steps more restrained. The result? That taut string in investors' minds eased a little.

This means investors now have stronger reason to believe: in October and December, the Fed is very likely to unleash a combination punch of rate cuts! And that is the real reason Thursday's downturn found relief.

On Friday, how do we ride this wave of sentiment to secure our currency surfing rewards?

The "stability" of the PCE data, isn't that, in fact, an invisible turning point signal?

Some in the market glance at the numbers and think, "nothing has changed."

But for us in the Legion, we see it differently: "this very lack of change is the greatest change of all."

Because it has reignited expectations of rate cuts, laying down an invisible stepping stone for the market.

This is the first sign of the bond yield curve starting to ease, a signal that the Fed now has more room to maneuver with rate cuts, and an entry point for liquidity that could accelerate in the months ahead.

Put simply, what I see is not just today's K-line candlestick chart, but

the flow of capital in the months to come.

First layer: Short-term surfing.

BTC/ETH, after Thursday's selling pressure, have already begun tentative bottom-building. Once confidence in capital flows returns, a sharp rebound is entirely within reason. Quantitative signals show that today's tape favors quick in-and-out moves, catching those waves of sentiment.

Second layer: Medium- to long-term positioning.

The Legion's victories have never been about short-lived bursts, but about the steady continuation of the "thick cushion" theory. USDC and Bitcoin reserves, the deep linkage between stablecoins and U.S. Treasuries—all of this means what we are building is not day-to-day speculation, but a cross-cycle strategy.

Today's PCE is just one cog tightened in this strategic chain, but its effects will play out gradually over the coming quarters.

On Friday, our task is to seize this harmony of sentiment and data and transform it into one victory after another in currency surfing.

We are not blind surfers chasing every wave, but a legion that understands the tidal logic beneath the swells. Just as a navigator doesn't rely only on the winds before him, but steers by the stars.

Now, let's look again at the opportunities within currency surfing's

volatility.

Using Bitcoin's movement as a representative case, it's clear that since the Fed's rate cut on September 17, the volatility range in currency surfing has been about 2 – 5%, and that includes downside swings!

If we translate that volatility into potential profits:

At 20x leverage, $20 \times 3\% = 60\%$ profit.

At 50x leverage, $50 \times 3\% = 150\%$ profit.

At 100x leverage, $100 \times 3\% = 300\%$ profit.

Well, that is where the opportunity lies, whether triggered by nonfarm payrolls or PCE data, the currency surfing market is presenting irresistibly attractive trading setups. Yet for anyone, capturing every single opportunity is nearly impossible.

So under Acumeta's guidance, what profits have we already secured?

Open your account and see, does your starting capital match your

If not, then don't let the next wave of currency surfing pass you by, pal!

Since joining currency surfing, have there been trading signals provided under the premise of meeting Acumeta's preset conditions?

The answer is yes.

As an intelligent, inference-driven investment tool, Acumeta currently stands as a leading provider of specialized trading signals. However, it cannot indiscriminately generate a single signal that fits every trading position.

The reason is twofold: AI inference is subject to learning time constraints, and it requires very precise preset conditions.

For example, a trading position of \$5000 and one of \$200,000 will yield very different safety chart interpretations and profit analyses.

Because these are ultra-short-term trading demands with extremely high precision requirements, issuing distinct signals for different position sizes is clearly the most beneficial approach for members.

In the past, this service was missing, that is why this week we launched the Quantitative Winners Legion, with the sole purpose of helping capital at every tier find better investment directions and

Furthermore, during the course of trading, especially in certain key [Doubling Every Trade] strategy plans, some members with [advantageous positions] need to further increase their positions in order to maximize final profit outcomes.

Meanwhile, members with smaller positions may not be able to take that step. This means that, in the context of unified community trading, I cannot always provide a currency surfing decision that perfectly fits each member's individual needs. Instead, I can only issue broad, generalized recommendations. As a result, some [advantageous position] members may feel puzzled: "Why can't I earn more? Why should I have to settle for less profit??"

For example, when a member trading with a \$20,000 position and a member trading with a \$1,000,000 position both follow the same Acumeta currency surfing signal, their profit targets and safety

margins are inherently different because of the scale of their capital.

****If the recommendation leans toward the \$20,000 position, it will compromise the interests of the \$1,000,000 position.**

****If the recommendation favors the \$1,000,000 position, it will raise the risk for the \$20,000 position.**

This is precisely why the demand for personalized service is the core reason behind the launch of the Quantitative Winners Legion, have you taken the step to upgrade yet??

How can I capture and lead my entire Quantitative Think Tank Center membership to fully ride and win this wave of wealth? That will be one of my key priorities in the future.

Over the past two weeks, many of you have actively engaged through community sessions and with my teaching assistant, providing valuable feedback on a series of questions regarding the outlook for currency surfing. This, in turn, has brought about important and necessary changes. On Monday, I laid out an interpretation of the Quantitative Winners Legion service. Today, let us turn to the relationship between Acumeta's signal frequency and [doubling every trade]—and ask: how far is the distance from doubling every trade to doubling total capital?

At the same time, I want to summarize why what we have provided for free in the past must now evolve into a paid service in the future.

This is essential to sustain the growth of quantitative strategies and the continued development of Acumeta, while also enabling us to deliver higher-quality, personalized services.

Are you also willing to follow us in making this profound shift in how we think about wealth appreciation?

The screenshot shows the ETHERMAC website interface. The top navigation bar includes links for Buy, Market, Trade, Currency Surfing, Copy Trading, STO, Innovation Fund, Security Center, and Stock. A green arrow points to the 'STO' link. Below the navigation bar, there are tabs for 'Fixed' and 'History'. The 'Fixed' tab is active, displaying a search bar and a table of investment options. The table has columns for Token, Yield, Term(Days), and Action. There are three rows of data, each with a 'Subscribe' button and a small line chart showing an upward trend.

Token	Yield	Term(Days)	Action
USDC	88.30%	15	Subscribe
USDC	124.50%	30	Subscribe
ETH	126.80%	30	Subscribe

Locking in profits and setting those profits toward new goals of wealth appreciation—this is our new winners' secret.

I know clearly that this wealth management fund, designed as a short-term, closed-end, stable interest vehicle, serves to roll over the profits you've earned from each round of currency surfing, thereby expanding the scale of your future wealth.

Compound interest is the eighth wonder of the world, how do we achieve it? Exactly as we are doing now—by channeling your currency surfing top-ups/splitting your positions into the wealth

management fund, securing stable and safe returns for the future.

Of course, there is no shortage of wealth management fund types that track new coin STO subscription projects. For details, please contact official customer support for assistance in completing your participation.

Compared with the potential risks of volatility in currency surfing, the miracle of compounding through reinvestment will firmly anchor the very foundation of your profit tower.

Pals, do you realize how important this is for your long-term commitment to our quantitative strategy services?

Only when we view time itself as another dimension of wealth appreciation can our pursuit of wealth truly measure the future—and the enduring power of legacy, don't you agree?

Why are we providing the Quantitative Winners Legion's [Doubling Every Trade] Acumeta trading signal service this week?

First, we have adjusted Acumeta's preconditions for signal detection. Under our integrated inference-and-recognition analysis, any signal that does not meet a >100% profit-potential threshold is filtered out; so we focus exclusively on currency-surfing prompts that can deliver faster gains.

Second, as you know, 2025 is pivotal for the FinLogic Quantitative

Think Tank Center. Our community is committed to becoming a model of long-term partnership that leads every member to tangible results from our quantitative-strategy services—creating a new kind of investing experience for the Acumeta era.

In parallel, we aim to reflect our rising valuation through token FGT, with the goal of building an industry rising star valued at over \$3 billion, aligned with the "Stargate" grand project.

If you're part of this journey, consider carefully the partnership opportunities ahead. We've extended a sincere service invitation and have welcomed every member's validation of our currency-surfing approach and Acumeta's training progress over this period. We hope to earn your most loyal feedback and your decision to partner with us. Join our Quantitative Winners Legion, and set the flywheel of wealth appreciation in motion!!!

From [Doubling Every Trade] to doubling total capital—the expansion marks a new requirement and goal for future investor education services:

We know that Acumeta cannot achieve a 100% win rate, and therefore it cannot avoid the reality of minimizing potential risks. That's why what we pursue is overall success. Just like every NBA season, the regular-season ranking only proves we have a chance to

reach the playoffs, but winning the 16 playoff games to secure the championship is every player's dream.

In the same way, raising the goal of our quantitative strategy services must be tied to each member's specific capital size, trading preferences, and time flexibility—matched with personalized Acumeta signal frequencies, along with some protective and reasonable paid services. This allows us to precisely align with each member, helping them prepare for a long-term cooperation plan. After all, what we seek is not cooperation for a week, a month, or even a quarter.

What we envision is a long-term plan spanning one, three, even five years. This is a critical step in building our brand. Only by closely uniting with our members to shape and elevate their long-term value can we propel the Quantitative Think Tank brand to gain greater recognition and prestige across the United States.

Do you now understand why I so strongly emphasize this invitation to establish long-term cooperation with every member of the Quantitative Winners Legion?

Recently, the international landscape has been turbulent, with news of escalating conflicts constantly emerging.

The war in Ukraine continues, the Middle East remains deeply

FinLogic

complicated, and Trump's tariff policies are pushing the global investment environment into unprecedented challenges.

The turmoil in these regions not only has profound effects on their local economies, but also creates volatility across global supply chains, energy markets, and financial systems.

In times of turbulence, the ability to anticipate and prepare—by allocating global assets in advance—will be a vital way to navigate uncertainty

The economist Nouriel Roubini, often dubbed [Dr. Doom] has even warned that if the Middle East conflict worsens, the oil crisis of the 1970s could replay itself, potentially igniting stagflation.

For the stock market, as shown in the chart, the oil price shock of 1973 serves as an example—it led to declining equity returns the following year.

And as we all know, over the past decade, the asset that has been

FinLogic

most fervently embraced during times of uncertainty has been Bitcoin!

Some study TIPS: How do we make stagflation easy to understand?

Imagine this scenario:

You walk into a supermarket and notice that the bread and milk you usually buy have gone up in price—and not by a little. Strangely, though, there are fewer and fewer shoppers in the store, and many products aren't selling. At the same time, you hear that a lot of your friends have lost their jobs, and finding new work has become increasingly difficult.

That's the simplest example of stagflation.

To put it plainly, stagflation means:

Rising prices: Just like regular inflation, goods keep getting more expensive.

Economic stagnation: But the economy isn't doing well, factories are closing, and unemployment is high.

It's like a person who has both a high fever and no strength in their body at the same time, an especially miserable condition.

So once the economy enters such a state, why would crypto become a mainstream investment?

Because the deflationary mechanism of Bitcoin is inherently attractive, it draws capital as a hedge against risk. That demand leads to fierce buying, which in turn drives its price higher. Just look at what happened during the inflationary period of 2020: Bitcoin reached new record highs.

When stagflation and rising unemployment set in, speculative demand tends to surge. That, in turn, injects fresh momentum into currency surfing, creating market heat unlike anything we've ever seen before.

That is why all of our preparation today is really about positioning ourselves for the next great wave of wealth opportunities, thinking comprehensively about what lies ahead!

On the macro level, strategic decisions define our position for victory.

On the micro level, tactical decisions ensure we capture success.

So what have we done at the micro level? It is exactly what we are carrying out right now, Acumeta's customized service for the Quantitative Winners Legion.

We strive to deliver the best service for each individual member, guiding every one of you to discover the most effective path to investing. Isn't that exactly what you've been seeking?

According to Jim Rogers' book «The Age of Crisis», the 20th century up to the present has already experienced several slack periods within the Kondratiev cycle.

It's not hard to see why—when the economy remains sluggish for long periods, technological progress slows, and internal contradictions sharpen.

The surges in gold + Bitcoin are driven by war and crises of confidence in currencies;

I believe the reason the market is brushing aside both positive and negative data is not only because of heightened geopolitical tensions, but more fundamentally due to a deepening crisis of trust in national currencies around the world.

Looking back at last year's election, whether Trump or Harris came to power, the result was almost certain: the deficit would continue to grow, and the problems would be "solved" with more borrowing and money-printing. That only magnified concerns about U.S. debt and undermined trust in the dollar;

Meanwhile, China's recent policy moves clearly signal a coming flood of liquidity (despite its heavy local government debt), while Europe's persistently weak economic data also foreshadows another round of monetary easing.

Bitcoin has now become the best choice in the market for

investment + speculation + hedging. This is the wealth wave

unleashed by monetary overexpansion!

Will you let this cycle's opportunity for wealth appreciation pass you by?

100 years ago today, humankind first took to the skies. On December 17, 1903, the Wright brothers piloted the world's first airplane into the air, opening the chapter of human flight. Looking

back on a century of aviation, the development of the aircraft industry has been inseparable from the leaps of science, the progress of society, and the advance of civilization.

A century later, in 2025, the "Starship" rocket completed its 10th test flight. About 7 minutes after launch, its super-heavy booster successfully broke through the atmosphere and returned to the launch tower, where it was firmly caught by two mechanical arms.

Time is a wondrous kind of magic. Human progress always surpasses imagination, and in truth, progress has always been driven by visionaries like the Wright brothers and Elon Musk, whose dreams of transcendence carried all of humanity forward.

When it comes to creating doubling wealth through currency surfing, 3 months from now, or even 6 months from now—when you look back on the decision you make today, you will realize that this memory, uniquely yours, is priceless. The choice you make today changes not only your own path, but the destiny of your family.

Never allow yourself to sigh with regret, seize the wave of wealth that this era has placed before you. After all, which hero has not found truth through experience, and then been driven by that truth to become the best version of themselves?

You are the very best! My salute goes to every member of the

FinLogic

Quantitative Winners Legion!

Charlie Munger's investment truth: "We prefer to put a large amount of money into places where no further decisions are required from us; you must stick to your principles, and when the right opportunity comes, seize it with all your strength."

This principle highlights the superiority of Acumeta's intelligent managed copy-trading;

All we need to do is join as a Strategy Master or Empire Architect member, fund our account, and become the best version of ourselves—then you can enjoy the extraordinary investment results made possible by this advanced technology.

Just as in 2017, when Buffett began to doubt traditional businesses and sold Walmart;

Buffett recognized that the times were changing. In order to continue achieving his goal of 15% annual growth in shareholder equity, he had to make a change and adapt to the new era.

He began studying the technology sector and ultimately invested heavily in Apple.

Change yourself, adapt to the new era, and rely on Acumeta to create extraordinary wealth, that is the transformation you must make! See you this afternoon, pal!

FinLogic

Ladies and gentlemen, dear victors of the Quantitative Winners

Legion!

Did Friday's market feel like something you've seen before? Indeed, just as I analyzed on Thursday, after a brief wave of panic and option-driven pressure, it found new relief.

Some call this the magic of the market, but I prefer to see it as a contest between human nature and logic. When you can anticipate the turning point of sentiment in advance, you are already standing at the inflection point of wealth.

The clearest example lies in the crypto market. Ethereum was the first to reclaim the 4,000 mark—more than just a technical threshold, it is a psychological dividing line.

Do you know what happens at each breakthrough? It is like a marathon runner breaking through the 30 km wall, pain and struggle suddenly transform into a new source of strength. It is precisely in these moments that the market's allure is magnified

Next week, a topic that could set the whole stage alight looms ahead—the potential shutdown of the federal government.

Negotiations between the two parties in Congress have made no progress, and the likelihood of a shutdown is growing. Some people ask me: "Isn't this just another political farce?"

My answer is yes, and no.

Yes, because such events are hardly uncommon in U.S. history; no, because every time it happens, the market gets reshuffled.

Will it affect next Friday's nonfarm payroll report? The answer is: very likely.

Think about it, if the government shuts down, some statistical agencies stop operating, meaning data could be delayed or its reliability compromised. If investors lose their most trusted anchor,

how can the market not panic?

It's like driving on the highway when suddenly all the road signs go dark and your GPS fails, would you dare to keep accelerating? Most drivers would immediately slow down, or even pull over. Market sentiment works the same way.

Continuing yesterday's reflections on the impact of a potential federal government shutdown:

First, who really benefits from this? As the political stalemate drags on, will the U.S. dollar index continue to strengthen? Will safe-haven funds be reallocated into crypto?

Second, could this accelerate expectations for rate cuts? Don't forget, the Treasury needs financing, and the Fed has to balance interest rates. Ironically, a government shutdown might actually become a reason to push for lower rates.

Third, does this change the long-term trend? Short-term volatility is just smoke and mirrors, the true winners are those who can see where capital will be flowing 1 year, 3 years down the road.

In my view, the reason the crypto market grows more attractive in such turbulent conditions is not merely because it's an emerging asset class, but because it is increasingly seen as an alternative that addresses the shortcomings of traditional finance. When Treasury

risks, fiscal deficits, and political gridlock push the dollar into an awkward corner, stablecoins and crypto emerge like a new kind of speedboat in the storm—agile, resilient, and, while smaller, able to maneuver around the inertia and sluggishness of the big ships.

History always leaves us with lessons, new wisdom for investing:

In the 1970s, U.S. inflation surged out of control, the oil crisis, layered on top of a mounting fiscal deficit, left the markets in despair. Many chose to dump their holdings, panic, even liquidate completely.

But my mentor, a top-tier investor, stayed calm. He bought gold and select energy stocks, ten years later, his wealth had multiplied many times over.

Why? Because he looked past the market's short-term noise and seized on the long-term logic.

Today's crypto is much like gold back then.

Market panic never disappears, it merely resurfaces under different guises. The true winners are not those swept along by the tide, but those who can remain clear-headed in the eye of the storm.

Today's Friday market proves the point. The brief shock of panic-driven data was followed by an even stronger rebound.

Ethereum climbing above 4000 is not just a number, it is a symbol of

confidence. Next week, the government may shut down, that sounds frightening, but from an investment perspective, it could actually present a fresh wave of "currency surfing" opportunities. Friday's victory is nothing more than the overture to next week's grand narrative!

Use this weekend wisely to ready your capital and prepare for the great "on-chain wealth transfer" feast sparked by politics and data!

On Friday afternoon, as the sands of time slip through the hourglass, we step into a new weekend. Will you choose to spend it joyfully reunited with your family, or will you take a moment to reflect on the direction of your family's future and the heights and meaning your own life is meant to reach?

What, after all, is wealth? Why do we so fervently desire financial freedom, and what extraordinary feeling does that freedom truly bring?

Over the past two days, I watched a Netflix documentary, «Countdown: Inspiration4 Mission to Space». It was truly remarkable, and I found myself both inspired and deeply encouraged. I even realized that during the rocket launch, I felt a sense of enjoyment—rather than being tense throughout the entire process.

The Inspiration4 Mission was the world's first all-civilian spaceflight, and the first true "civilian crew" in space exploration.

I believe it marked the highest Earth-orbit flight achieved in 30 or 40 years.

The only missions to surpass it were the Hubble Space Telescope servicing flights and, before that, the Apollo lunar landings in 1972, both of which were undeniably remarkable.

As human beings, we should always strive to go further, to reach even greater heights.

In my view, it would be truly tragic if Apollo were remembered as the pinnacle of human achievement.

Landing on the Moon was an extraordinary milestone, but it has now been 52 years since that moment, and we have not returned. Does this mean our civilization has already peaked?

We must go back to the Moon, to establish a sustainable scientific

base there, just as we have at Antarctica and other scientific outposts around the world. On the Moon, we could uncover far more about the true nature of the universe.

That is the spirit of space exploration, just as it is the spirit with which I pursue wealth: unending, boundless. It is action that proves our progress and our capacity. And we, too, should elevate wealth to greater heights, no matter where we stand today, don't you agree, pal?

Acumeta may have started as an engineering matter, but now it is turning into a historic moment. What are the defining moments of the 21st century that deserve to be remembered?

For me, it's something like the Inspiration4 Mission—a milestone that may one day be remembered as one of humanity's earliest steps into a new era of space exploration.

Even today, with a trillion dollars, you still couldn't buy yourself a

ticket to Mars.

We need to make that a feasible goal, to make it technically possible.

But our ambition is not just to plant a flag and then wait another half-century before returning, as we did with the Moon.

I believe Acumeta is becoming that kind of enabling technology, one that turns goals into reality. And although you may not yet have the chance to buy into it directly, the moment is already unfolding. By mid-December, you will be able to experience it yourself, so long as you've joined the Quantitative Winners Legion. This is your future to look forward to, and an excellent choice to help you deepen your thinking about wealth and elevate it to the next level.

I'm talking about the way of handling things, sometimes you start from scratch, and sometimes, after seeing what's out there, you decide to begin again from the ground up.

This, in fact, has been the boldest decision I've ever made. I built an entirely new Acumeta quantitative system for financial investment, both in software and hardware, from the ground up.

The goal was nothing less than to achieve comprehensive victories across stocks, currency surfing, options, and forex markets.

When Acumeta was born, our hunger for victory became a

movement of wealth-winning action.

By choosing the crypto market as our battlefield, we chose to compete with investors across the globe. We knew it would be difficult, but as with all worthwhile pursuits, beginnings are rarely smooth. That's why we had to forge a reliable tool, train it, let it grow, and shape it into the best option and the strongest ally.

Now we've done it. We are no longer confined to competition within the United States, even though this is where we started, our path leads to the world—to the global currency-surfing markets where USDC and BTC/ETH reign.

Everyone relies on their own ability to win, harsh as it may sound, hope is right before us—and we are already achieving results step by step, isn't that right, pals?

Wealth is a timeless theme

Wealth, as one of the timeless themes of human society, embodies people's longing for a better life and their pursuit of it.

The story of wealth is not merely about accumulation, it carries a deeper meaning: freedom, opportunity, a sense of accomplishment, and a measure of control over the future.

Money is not just a tool of payment, it is also a marker of social standing and the degree of freedom one has in shaping life's

The allure of wealth and personal freedom

One of the most compelling aspects of wealth in American culture is the freedom of choice it confers.

This country has long been regarded as a land of opportunity, and wealth has been seen as one of the essential means of achieving the American Dream.

Whether it is the freedom to start a business, the ability to live life on one's own terms, or access to the best education and healthcare,

FinLogic

wealth allows people to make their own choices rather than being constrained by others or by circumstance.

John D. Rockefeller was one of the wealthiest men in American history. He amassed immense wealth through the oil industry, and that wealth not only gave him economic freedom but also the freedom to devote himself to philanthropy.

Through the creation of the Rockefeller Foundation, he strongly supported medical research, education, and scientific innovation.

This freedom of wealth not only shaped the trajectory of Rockefeller's own life but also brought positive change to countless people around the world.

On a personal level, to win wealth, to earn money, and to create the value and meaning of one's life is to build the widest possible boundary for one's dreams, so that every idea in your heart can be realized through financial resources. This is the very reason and meaning behind our fight today for ourselves and for the standing of our families, do you agree?

The peace of mind wealth provides.

Wealth brings not only freedom, but also a profound sense of security. Whether faced with an unexpected medical crisis or the

instability of global markets, sufficient wealth can help a family or an individual weather economic storms and avoid being thrust into hardship.

For you, wealth serves as a vital shield against life's uncertainties.

Whether through investing in currency surfing, equities, retirement accounts, or wealth funds, people strive to build their financial base to ensure their future is not easily broken by the unexpected.

The security that wealth provides reduces anxiety and allows one to remain steady in an uncertain world.

Accumulated wealth not only places you among the most affluent in a family, a community, or even a state, but also enables you to stay calm through any economic storm, while continuing to grow that wealth.

So tell me, pal, do you not long for your loved ones and children to spend their lives sheltered in such a safe harbor?

The sense of achievement and social status that wealth brings

Here in the U.S., building wealth through hard work or starting your own business is viewed as a mark of success—it shows your smarts, skills, and persistence.

Wealth not only allows people to feel a sense of personal accomplishment but also elevates their social status, earning them

FinLogic

greater respect and recognition.

Elon Musk, for example, amassed immense wealth through Tesla and SpaceX. But his story is not merely one of accumulating money—it is about breaking free from traditional industries, pursuing innovation and risk-taking. His wealth has given him global influence and a position of leadership.

For you, too, wealth can bring a profound sense of achievement.

Whether it's building a successful small business from scratch, or earning substantial returns through currency surfing with the help of Acumeta and the Quantitative Winners Legion, the success experienced in the process of wealth accumulation can significantly boost your confidence and the recognition you receive in society. Wealth allows you to gain greater respect and recognition in society. So tell me, do you aspire to be one of those who is truly respected?

The balance between money and happiness

The allure of money lies in the fact that it provides the ability to seize opportunities.

In modern society, opportunities are often tied to resources. Those who possess wealth are better positioned to grasp them, whether through investments or by entering the market at the right moment.

This power to shape future possibilities is what gives money such immense appeal.

Many wealthy individuals, after amassing great fortunes, choose to donate their wealth to charitable causes, creating greater social value. This "legacy of wealth" carries not only economic significance but also reshapes family heritage and status, alters social structures,

FinLogic

and fosters equality and progress.

Here in the U.S., while wealth is often seen as a symbol of achievement and freedom, true happiness stems more from the freedom of choice and the improved quality of life that money enables.

What kind of wealthy person do you aspire to become? Someone influential in your community? Your city? Your state? Or perhaps on an even larger stage?

I hope you discover the vision that defines your dream and join us in finding the drive to bring it to life.

Thus, the first theme of the Quantitative Winners Legion is: Unity! First of all, I extend an invitation to all our members, we must stay closely connected in this great wealth-building movement, to create the path to victory that best suits each of us, and to choose the personalized Acumeta service most aligned with our needs. Only by holding fast to this shared goal of the Quantitative Winners Legion can we truly find the meaning and value of wealth creation.

Our second theme is: Harness deep personalization.

We must embrace personalization, ensuring that advanced members become cross-domain winners, while newcomers achieve unprecedented progress.

The third theme is: Rate-cut winners' profits.

When you join my Quantitative Winners Legion, we have already established a shared consensus to win through currency surfing. We need to take a step forward, and we all understand that rate cuts bring heightened volatility to the digital currency market;

The fourth theme: ensure long-term planning and long-term security!

Are we working together for 6 months, 2 years, or even 5 years?

And for that, let's sign an upgraded security agreement!

Obviously, I don't want to hear that you're only aiming to grab 3 or 5 days of "bread-and-butter" profits, that would be nothing short of irreverence toward God.

The fifth theme: become a wealth dreamer who cannot be mocked. Martin Luther King's "I have a dream" made him the proud cultural spirit of America!

The torch of the Statue of Liberty has long illuminated our greatest dreams, guiding generation after generation of Americans to the summit of the world!

If you aspire to achieve \$5 million in winning profits, you cannot make decisions based on a mere \$50k stake. After all, a hundredfold return on investment is an outcome for the very few.

We must pursue high-probability success, and channel our most valuable resources, our most competitive advantageous positions, into personalized private services. That is what will make you a dreamer who cannot be mocked, because everything will be the rightful reward of taking decisive action.

And the final theme is this: Let unity be put into action!

Because we are united, we are committed to breaking through the limits of human desire for wealth. We follow God's arrangement, and seize the best opportunities of the moment.

Claim the family wealth and status you were always meant to have, and fix it firmly in place starting now.

Next Monday, let us, full of expectation, each choose the personalized custom services of the Quantitative Winners Legion that suit us best. Until then—farewell!
