Thursday, Oct 2, 2025

Ladies and gentlemen, beneficiaries of Acumeta:

The autumn days of October always carry a unique atmosphere. The air is cool, with a freshness that lifts the spirit and brings a sense of delight. As the old traders on Wall Street like to say: "Autumn is the market's golden season, because gains and volatility often arrive together."

And this October is especially remarkable! Just one day after the federal government shutdown, the Fed's rate cut decision once again ignited the flames of the crypto market, Bitcoin pushing toward 120k, Ethereum surging back toward 4500! Pals, this isn't just numbers on a screen, this is the trumpet call of the wealth game.

Why do I call this a great beginning? Because it confirms a truth we

have always emphasized: the real winners in the market are not those who predict the future, but those who act with courage at the turning points.

This week, our currency surfing diversified position plan once again delivered the perfect answer—demonstrating what true precision in timing means, and what the art of profit looks like!

Why did the federal government shutdown instead become a driving force for the market?

The reason is simple, America's political gridlock has made investors even more certain that the Fed must take action to maintain liquidity and stabilize the situation.

And interest rate cuts are the clearest and most powerful part of that action. Once rates go down, capital flows like water released from a dam, immediately seeking new outlets. What are those outlets? In the past, it might have been real estate, or the stock market, but today, the world's attention is firmly fixed on crypto.

The value of paper money has never truly rested on gold, but on the credit of governments. Once that credit wavers, wealth is like a castle built on sand—one storm can wash it away. And today, we are witnessing something even bigger, as the dollar's credibility falters, people are driven to seek stronger stores of value, and

Bitcoin & Ethereum are the answers of this new era.

Pals, look at the market these past few days, Bitcoin is surging toward 120K, ETH is pressing up against 4500. And this isn't just a rebound; it's a declaration—a declaration that the crypto market has shifted from being an "experiment" to becoming the "main player."

Our Legion's diversified position strategy is designed to capture this rhythm, allowing you to steadily harvest gains with every wave.

That's why we call it "currency surfing"

You don't need to predict the direction of every gust of wind, you just need to be ready to leap onto the wave when it rises, adjust your stance, and ride it with the momentum.

That's why the real wealth gap has never been about intelligence, it's about timing and the will to act. True investment winners don't rely on overnight luck, they rely on making decisive choices, time after time, at the crucial moments.

Bitcoin at 120K, ETH pushing past 4500, if you still haven't hit your expected profits in a market like this, you need to ask yourself: at which point did you miss the move? Where did you start to lose your edge? When the opportunity came, did you choose hesitation instead of decisiveness?

You don't lack technical knowledge, nor do you lack market understanding, what you haven't grasped is the true essence of investing— your gains don't come from short-term fluctuations, but from the compounded power of time and trends.

The market will never wait for you to be ready, it only rewards those who are already in the game. The curtain on Q4's crypto festive season has officially been lifted.

Open your currency-surfing trading account, check whether your Bitcoin/ETH positions are holding medium- to short-term orders. As this week delivers its most dazzling returns, do you have results you can truly be proud of?

Participation in this diversified currency-surfing strategy requires forward-looking judgment and steadfast execution. If you do not meet the advantageous position requirements I mentioned, then

you won't receive such trading signals. And if you haven't upgraded your membership level to unlock signal frequency freedom, you won't be able to take part either; because you know, these signals exist only for members whose capital and tier are matched.

So, are you one of them?

It's not too late, another rate cut is expected at the end of October, will you decide to miss out once again?

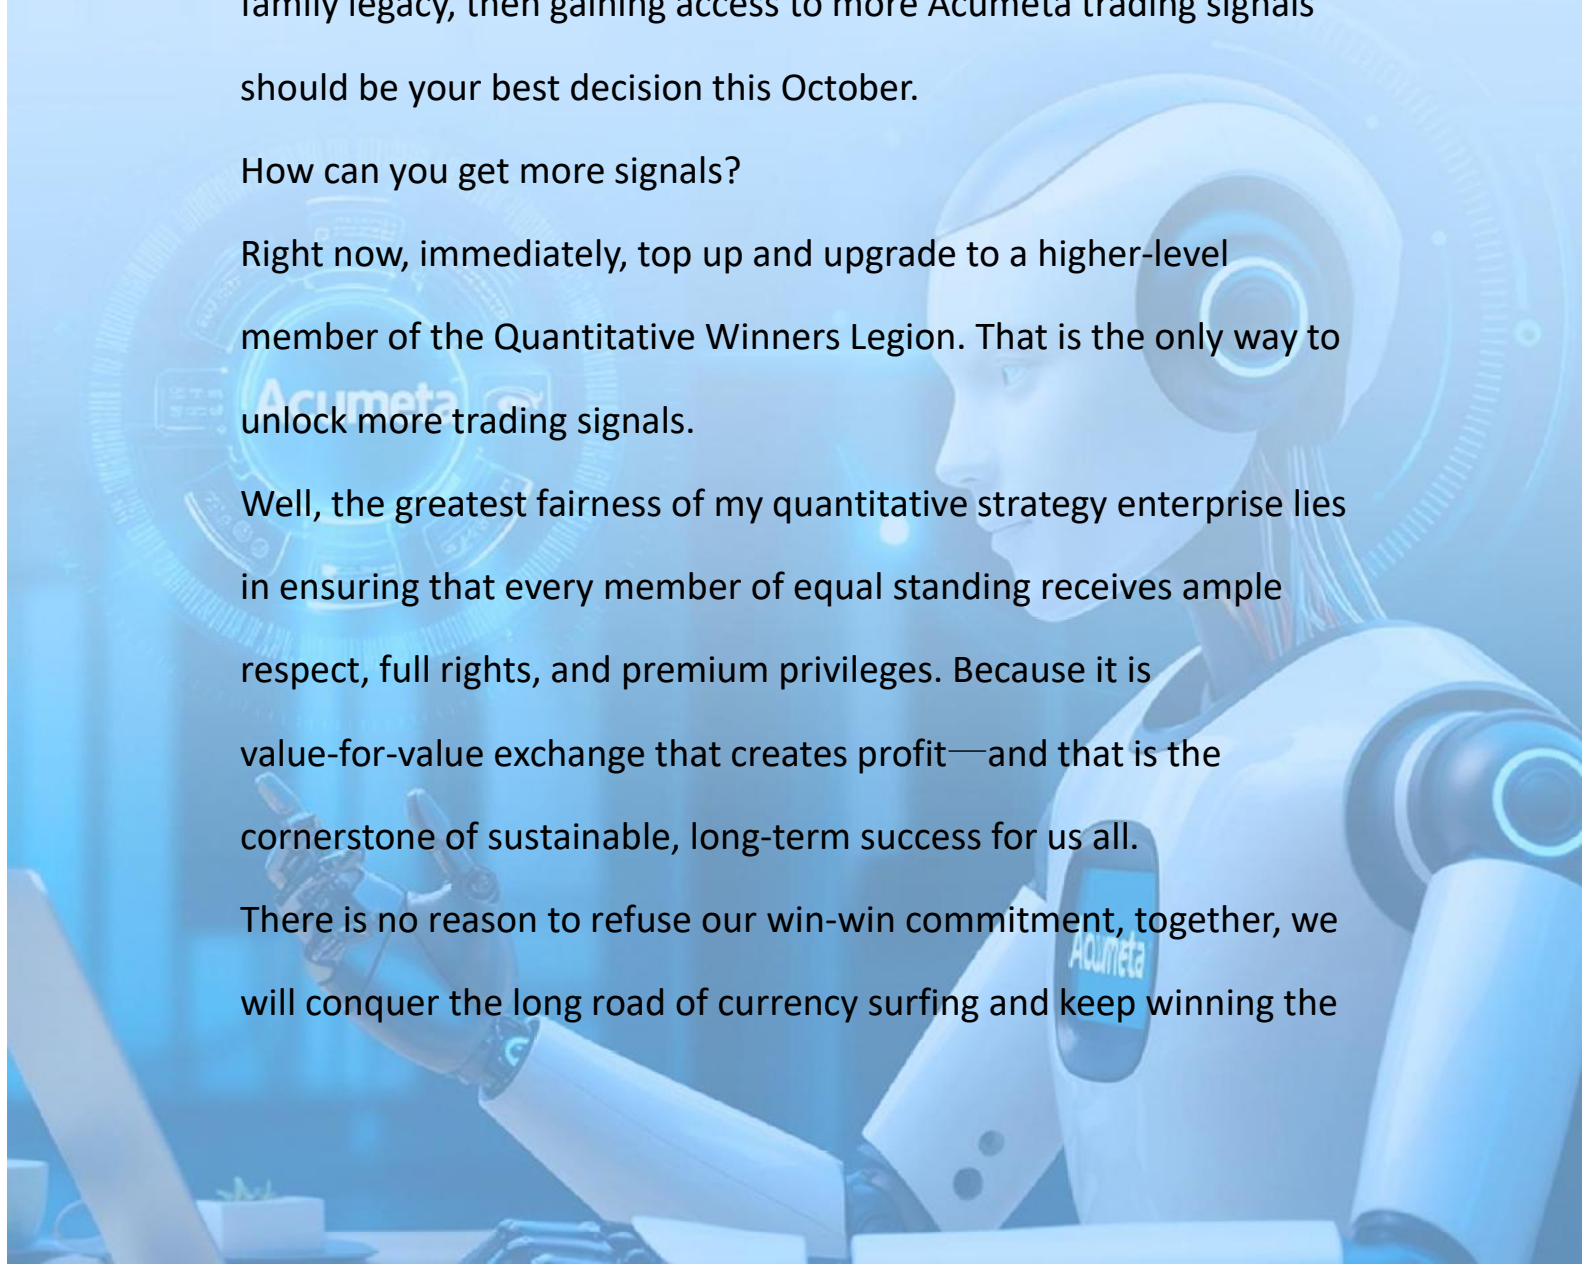

If you want greater wealth appreciation and aim to build a stronger family legacy, then gaining access to more Acumeta trading signals should be your best decision this October.

How can you get more signals?

Right now, immediately, top up and upgrade to a higher-level member of the Quantitative Winners Legion. That is the only way to unlock more trading signals.

Well, the greatest fairness of my quantitative strategy enterprise lies in ensuring that every member of equal standing receives ample respect, full rights, and premium privileges. Because it is value-for-value exchange that creates profit—and that is the cornerstone of sustainable, long-term success for us all.

There is no reason to refuse our win-win commitment, together, we will conquer the long road of currency surfing and keep winning the

Speculation is like the law of the jungle in the animal kingdom, it preys on the weak, and such tactics often hit the mark every time.

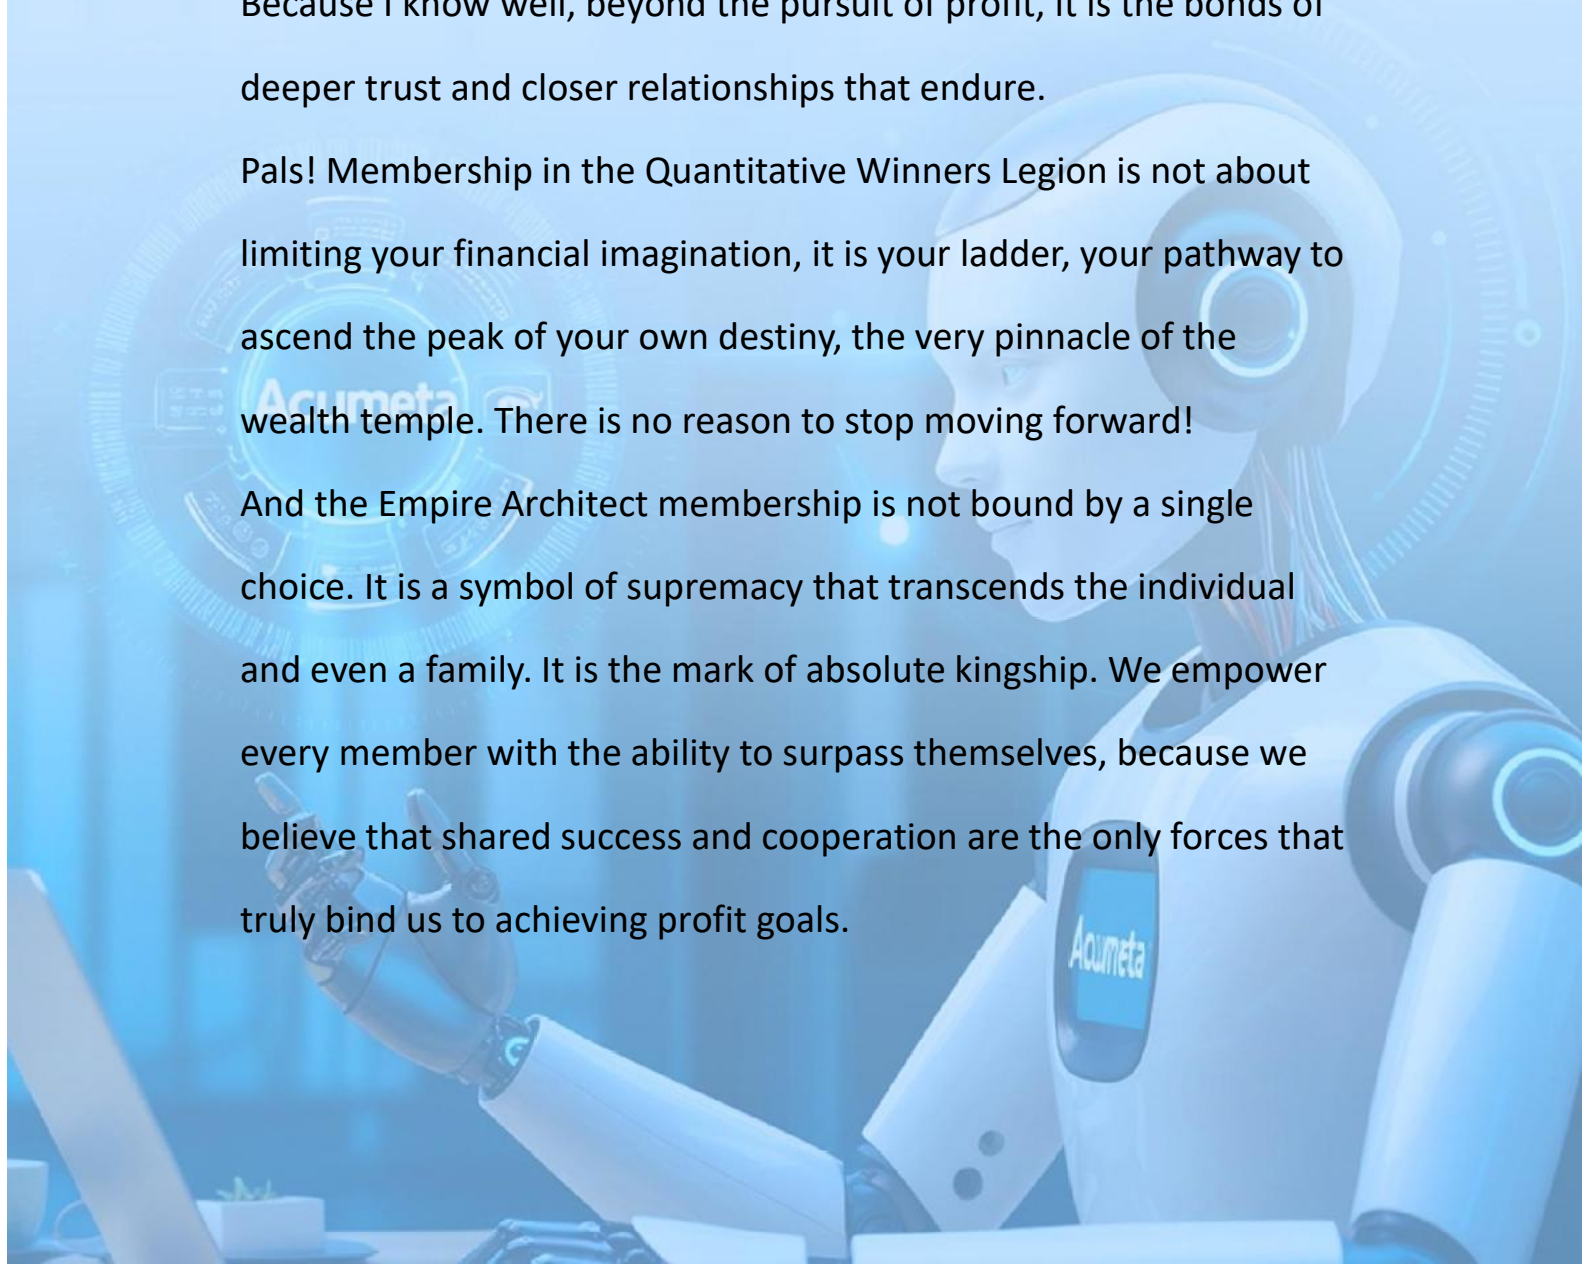

—This is a famous saying of the great profit-maker, financial titan George Soros.

It is precisely because of such warnings and teachings that my mission of sharing quantitative strategies is so important, and why every episode I deliver carries such deep, practical meaning.

Because I know well, beyond the pursuit of profit, it is the bonds of deeper trust and closer relationships that endure.

Pals! Membership in the Quantitative Winners Legion is not about limiting your financial imagination, it is your ladder, your pathway to ascend the peak of your own destiny, the very pinnacle of the wealth temple. There is no reason to stop moving forward!

And the Empire Architect membership is not bound by a single choice. It is a symbol of supremacy that transcends the individual and even a family. It is the mark of absolute kingship. We empower every member with the ability to surpass themselves, because we believe that shared success and cooperation are the only forces that truly bind us to achieving profit goals.

FinLogic

A perfect currency surfing experience!

Here's another way to put it, if gold were money, then this year—whether the S&P, the Nasdaq, or any other index—they would all be in the red, because none of them managed to outperform the money itself. And if Bitcoin is treated as money, then the stock markets fared even worse.

No matter what the choice may be, as Q4 moves into the final stretch of the Crypto Ode to Joy season, when we're preparing to welcome Christmas and the new year of 2026, every action we take right now will determine the posture with which we greet a future filled with hope and prosperity.

Pals, forget those stock market trades that are still tying you down.

Focusing on one thing is the most important factor in achieving one true success.

Currency surfing is built on the winning probabilities guaranteed to members of the Quantitative Winners Legion, and on the

above-expectation privileges of our Shareholder Members. We are cultivating millionaires who become absolutely powerful alongside us, and shareholder millionaires of distinction who will partner with us for the long term.

How to become wealthy?

I've asked myself that question too, don't give me empty talk—tell me how to actually make money!

It's only after walking the path that you realize, if you don't have the right mindset, the right methods, the right company among the best, and the persistence to act over the long haul, success is impossible.

It's like training—the goal isn't to win a championship. The true purpose of training is to become a good fighter.

But if you don't want to train, if you don't want to wake up early, yet still expect to become a world champion—that is absolutely

impossible.

So what is the right mindset for members of the Quantitative Winners Legion?

It is to shift from shrinking returns in the stock market into currency surfing in the Q4 crypto market.

And that is why we have witnessed Bitcoin climb from 110k back to the 120k peak, and push toward 150k by year's end, this is the proof that mindset shapes action.

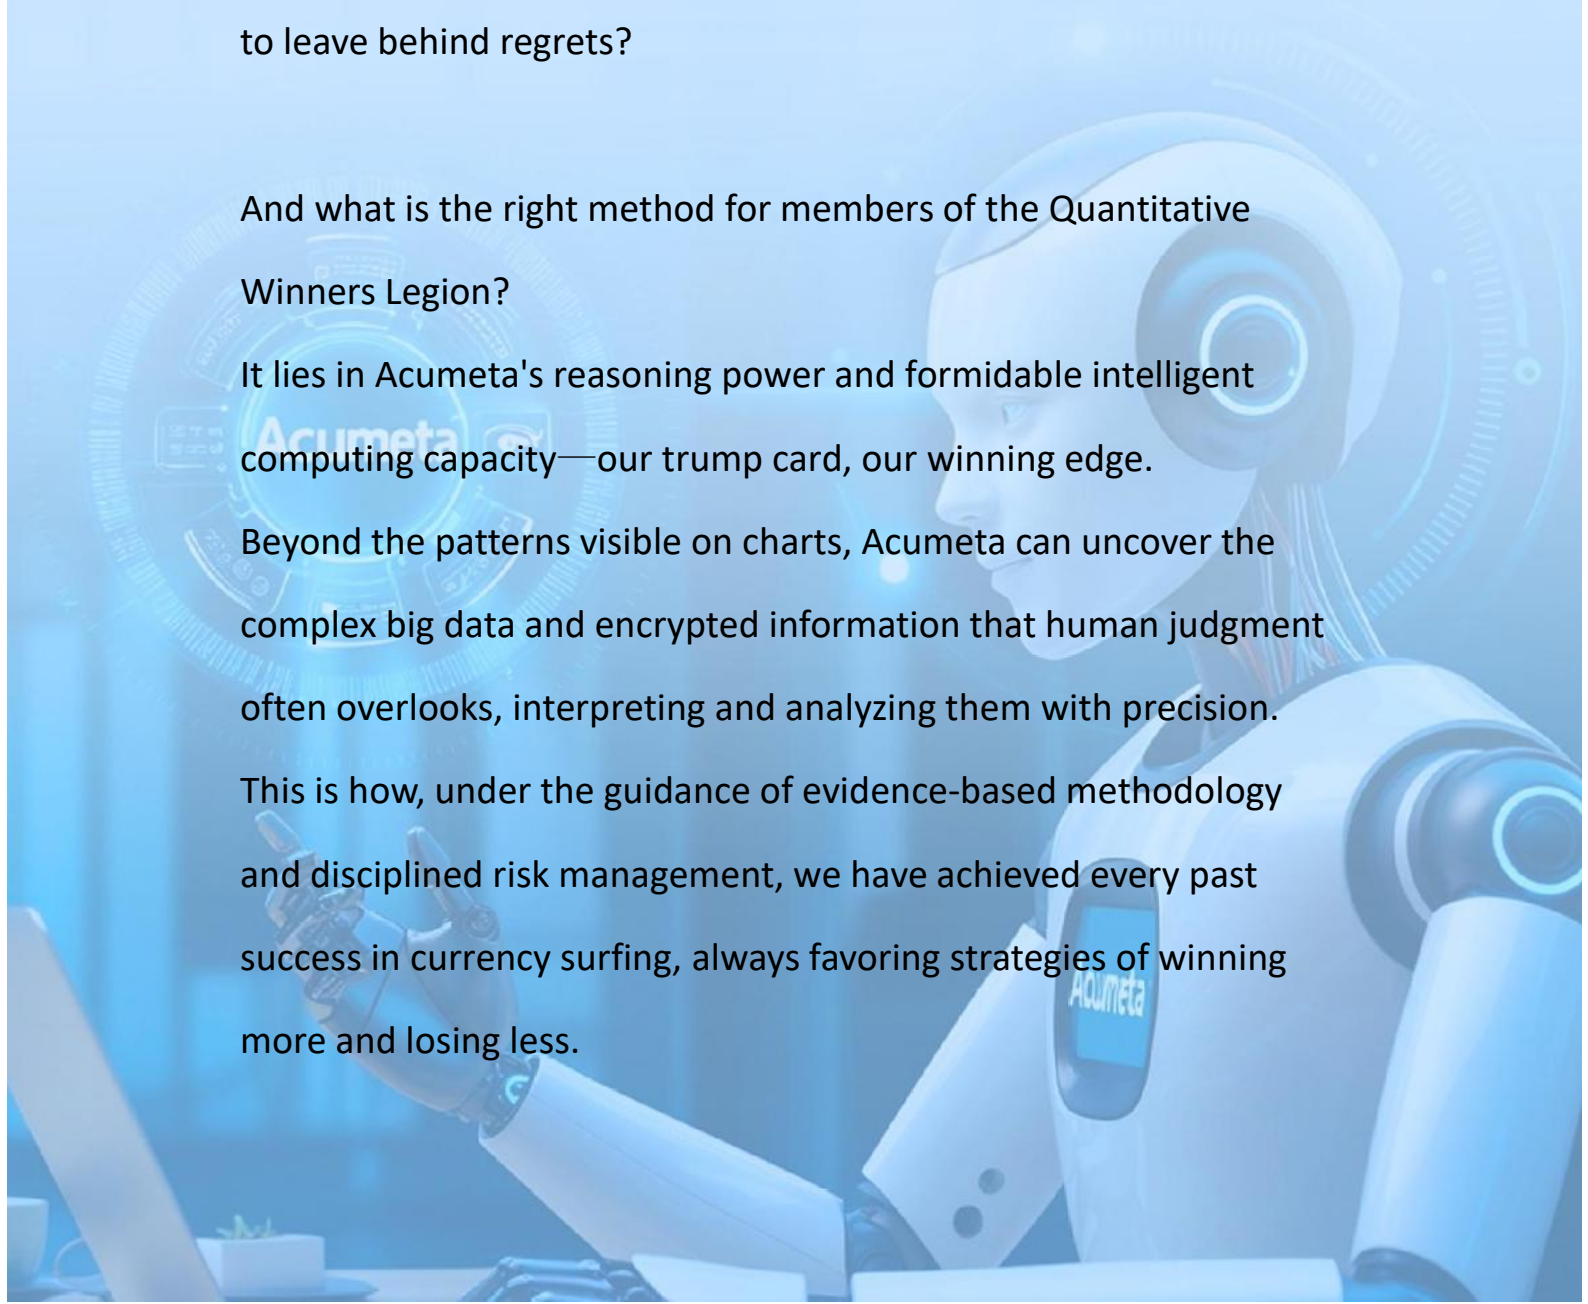

Pals, you've followed through on this transition, but are you ready to leave behind regrets?

And what is the right method for members of the Quantitative Winners Legion?

It lies in Acumeta's reasoning power and formidable intelligent computing capacity—our trump card, our winning edge.

Beyond the patterns visible on charts, Acumeta can uncover the complex big data and encrypted information that human judgment often overlooks, interpreting and analyzing them with precision.

This is how, under the guidance of evidence-based methodology and disciplined risk management, we have achieved every past success in currency surfing, always favoring strategies of winning more and losing less.

Being among the best also means surrounding ourselves with those who operate on the same frequency. Across every Legion tier, members share a strong consistency in capital scale, those with hundreds of thousands trade at that frequency, those with millions enjoy proportional rights and privileges.

And since we all aspire to become skilled players in currency surfing, we must embrace the culture of the player itself, we are destined to prove the reliability of it all through tangible results.

In October, with how much profit from currency surfing will you mark this special season of autumn's harvest?

God's revelation: Missing an opportunity is the same as rejecting God's gift of grace.

The Bible makes it clear: every sin and every blasphemy can be forgiven. So, of all the sins listed in the previous question, not one is beyond God's forgiveness. There is no deed that cannot be pardoned.

Without exception, we are all beneficiaries of God's grace and should hold gratitude toward Him.

Whether it is eating, breathing, or feeling the warmth of the sun, we receive what sustains our lives.

FinLogic

Beyond these indispensable blessings, we are given countless others each day: the care of family, training in our professions, a letter with good news, a gesture of love, a friendly greeting, or the visit of a guest.

These are the very things that sustain us and make life enjoyable.

Have you ever paused to be thankful for them?

Receiving is not limited to material things—such as meeting a person or inviting them into our home.

We can also open the doors of our mind to receive new ideas. We can take to heart spiritual knowledge, instruction grounded in Scripture, and words of encouragement.

Whatever we may possess, or think we possess, if we trace it back to the source, we will see that all of it comes from elsewhere.

We therefore have no reason to boast of the material or spiritual blessings we enjoy.

On the contrary, we must cultivate gratitude, acknowledging the true source of every beneficial provision, and use these blessings according to their intended purpose.

So then, what spiritual gifts should we thank God for?

The Bible speaks of those who are given "as gifts": apostles ... shepherds and teachers.

By accepting with gratitude all that Jehovah's generous hand provides, you will know true joy.

How worthy it is to embrace God's arrangements with gratitude!

For whatever you set aside in this present order, you will receive a

FinLogic

hundredfold reward and everlasting life from God.

And the gateway to BTC/ETH, and to the entire world of digital assets requires one essential, almost magical key: the stablecoin USDC.

If you already hold USDT, you can exchange it 1:1 for USDC.

Well, because before you ever owned crypto, you were effectively cut off from the blockchain world. Though it was all around you, you remained separated from it. That is why, as a newcomer, or as a curious treasure-seeker, you must begin by holding this golden key! Each of us possesses wealth in the real world (money). But how do we move it into the crypto world? Converting it into USDC is crucial, or alternatively, holding spot assets like BTC/ETH.

Why am I so eager for you to own USDC? Because it is not only the golden key that opens the door to the crypto world and the most effective path into the Q4 Crypto Ode, but it is also part of the United States' new national dollar strategy. Yes, by simply holding USDC, you are supporting this great strategic initiative!

Why are P2P verified merchants considered safe and reliable settlement providers?

Whether they are local North American P2P verified merchants or

international Golden Shield merchants, all of them are strictly managed and certified by ETHERMAC crypto exchange in accordance with MSB regulatory rules. Every merchant must deposit a security margin with the exchange to ensure that whenever a user conducts a USDC exchange with a P2P verified merchant, the process is safe, convenient, and guaranteed to settle. If a P2P verified merchant encounters any credibility issue, the exchange will directly release the equivalent value in USDC from the merchant's security deposit as compensation, crediting it into the user's currency-surfing account. This is the trust mechanism built on regulation.

You can therefore participate in exchanges with P2P verified merchants with full confidence, use the official verified contact

We don't need applause or cheers from others, because profits only rest in our own currency-surfing accounts.

We don't need anyone's vote to secure our precious place as members of the Quantitative Winners Legion, nor to claim the supreme honor of Shareholder Membership, because our decision comes from recharge actions proven by real profits.

We are bound by long-term cooperation, with shared success as the core objective of our agreement. Through Acumeta's efficient

execution, we pursue the rules of success that surpass everything else.

Pals, the revelry of the Q4 Crypto Ode is already underway. The happiness of the present moment should include the signals of your victories in currency surfing. We deserve to embrace higher wealth strategies and let a perfect future unfold. That, in 2025, is what I believe to be the most wonderful thing.

A salute to everyone who perseveres and successfully reaps profitable results! See you this afternoon!

Victors, set aside your "urban attire"! In the "Crypto Paradise," we are all "top-tier farmers"!

October has arrived, the traditional harvest season in the United States.

You might say, "Hey, most of us don't have farms!" That's true—we

don't have tractors, warehouses, or fields of wheat.

But this autumn, we still feel the joy of farmers, because here in the Crypto Paradise, riding the crest of currency surfing, we've entered our own season of harvest!

Bitcoin has officially reclaimed 120K, and ETH is on the verge of breaking past 4500. On Thursday afternoon, the market gave us its most brilliant scene yet—those soaring numbers, like golden sheaves of rice, pouring handful by handful into our "storehouse of wealth."

And this is precisely the most tangible reward that this week's currency surfing diversified position plan has delivered to us.

Why do I call this a "harvest"?

Because it's not just a return on investment, but a sense of psychological satisfaction. Imagine a farmer looking out over his field, golden with crops, knowing that this year's hard work has paid off.

Similarly, when we see the growth in our accounts, that same feeling of peace and accomplishment is exactly the same.

The difference, however, is that the farmer relies on soil, climate, and fate, while we rely on strategy, timing, and execution.

A harvest is never random, it's a reward for long-term effort. This is the essence of currency surfing, it's not about blindly chasing after returns, but understanding when to plant, when to water, and when to harvest.

"Why this October? Why, of all times, right in the midst of a government shutdown, market turmoil, and Fed rate cuts, are we able to reap such returns?"

The answer is simple: chaos breeds opportunity.

History has confirmed this pattern countless times. After the Great Depression of 1929, those who dared to pick up bargains in the rubble became the new generation of the wealthy.

Likewise, during the 2008 financial crisis, while many panicked and sold off, others chose to step in aggressively at the bottom, and reaped severalfold gains when the recovery came.

And today, we are witnessing the turbulence of a government shutdown and the liquidity unleashed by the Fed's rate cuts.

Together, these forces are fueling the crypto market's breakout.

As the old saying goes, "Crisis is the seed of opportunity." The only question is: are you ready with your own "surfboard"?

Many people fail to make money in investing, not because the market doesn't give opportunities, but because they always enter just as the tide is going out, and exit right before the surge arrives. Our diversified surfing plan today is like the old fisherman's "tide chart"— it tells us when to cast the hook, and when to haul in the net.

Thursday afternoon's BTC/ETH market action was a textbook example. We didn't chase blindly, we had already positioned ourselves in advance, and when the wave rose, we harvested steadily.

The essence of wealth is, in fact, a game of "timing differences."

Take one step ahead, and others are already a step behind. BTC at 120k, ETH at 4500 — it may look out of reach, but think back, not long ago, they were still moving sideways in consolidation. Many lost heart, some even shouted, "Bitcoin is finished."

Yet today, with a powerful surge, they proved once again the market's harshness and beauty: if you miss it, you can only sigh inside someone else's story.

The greatest strength of our Legion lies not in prediction, but in execution. Predictions can be wrong, but execution must be fast. That's why we can proudly call ourselves the "Quantitative Winners Legion"

The United States is currently in one of the most unstable investment environments in decades.

While some investors are celebrating the stock market rebound, I'm keeping my eye on the possibility of an impending market crash—warning that it may be wise to lock in stock profits early!

My focus is on preparing for such an event. Having witnessed massive risk build up over time, I want to emphasize... my priority is on hedging against a potential collapse, because today we are more vulnerable than at any point in the last 20, or even 30, years.

Despite the market's rally over the past 6 months, significant risks

remain.

Stock prices look "insane," with most of the S&P 500's gains concentrated in just a handful of companies tied to artificial intelligence.

This is reminiscent of the rotation we saw during the dot-com bubble, when only the top performers carried the index.

AI may well be the best long-term investment, but perhaps not through these companies.

Meanwhile, U.S. debt has risen "beyond our capacity to bear." By the end of September, the national debt-to-GDP ratio had reached 128%.

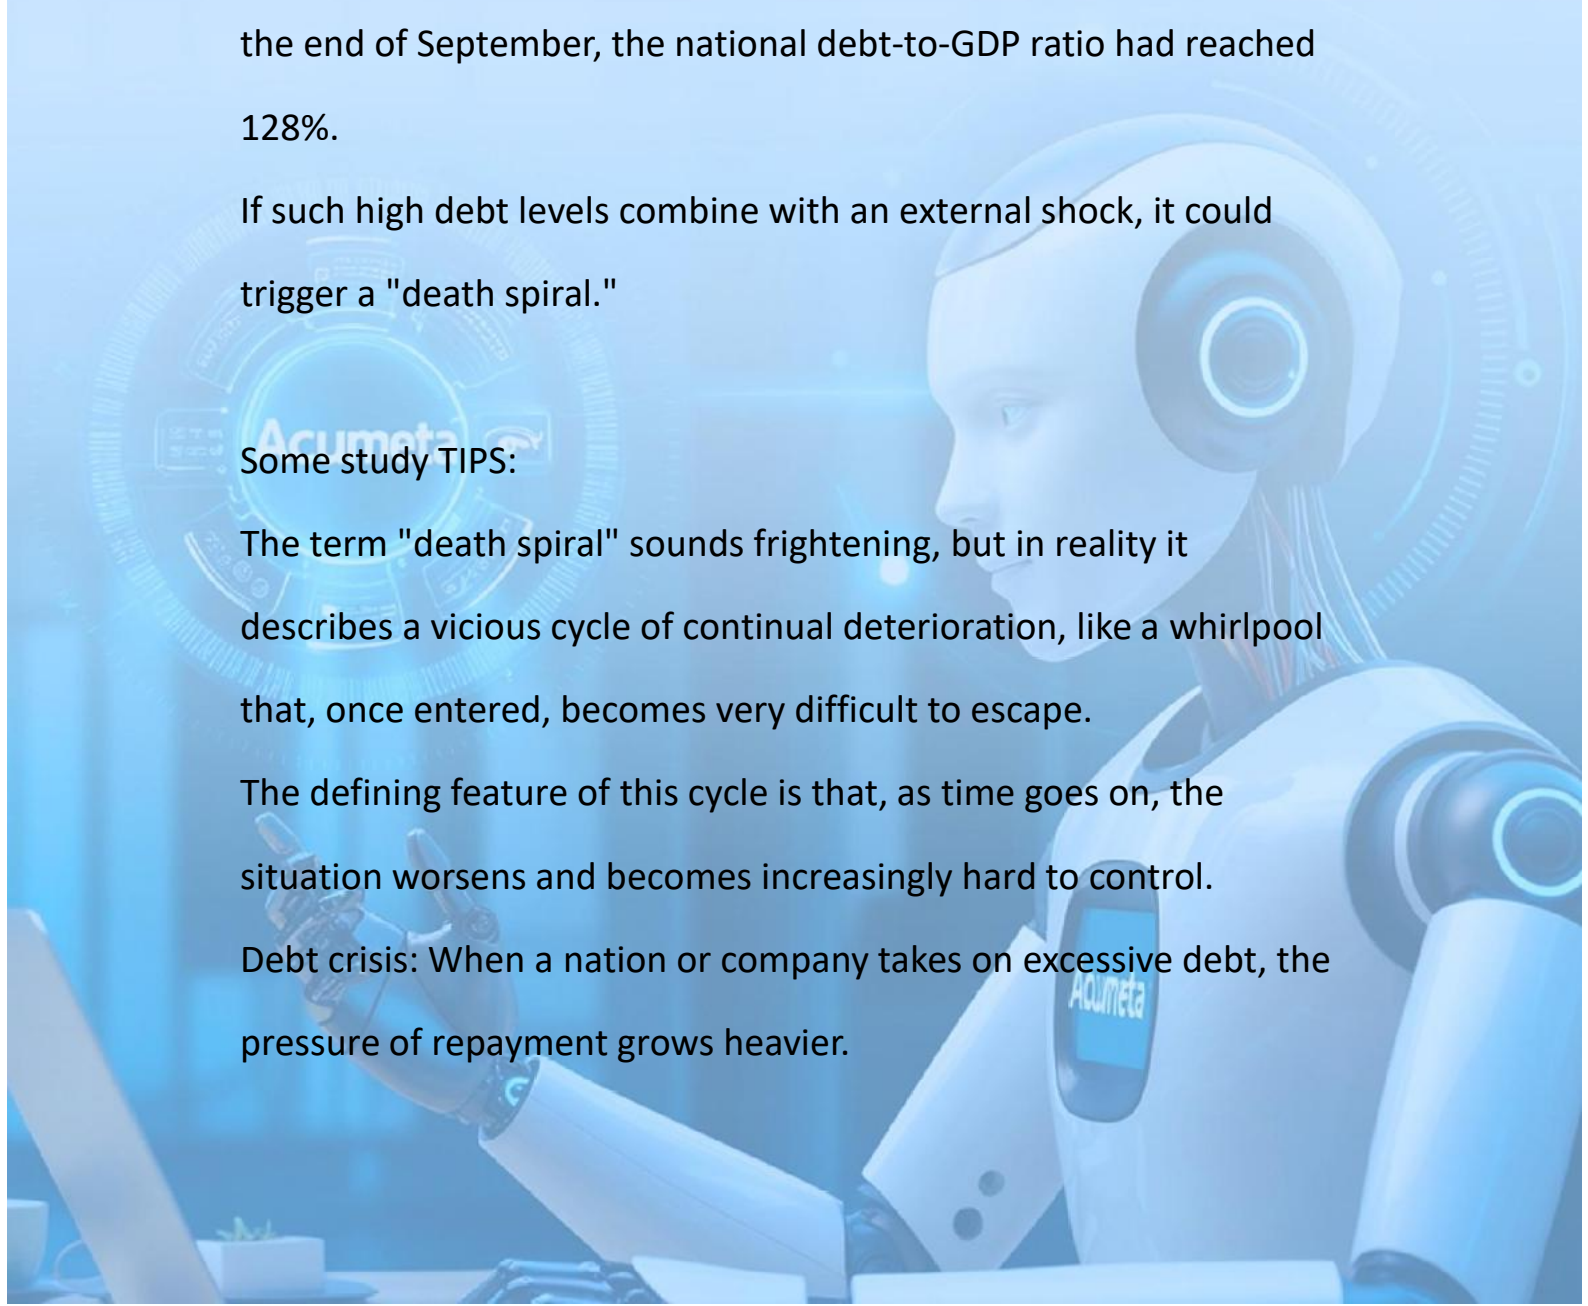

If such high debt levels combine with an external shock, it could trigger a "death spiral."

Some study TIPS:

The term "death spiral" sounds frightening, but in reality it describes a vicious cycle of continual deterioration, like a whirlpool that, once entered, becomes very difficult to escape.

The defining feature of this cycle is that, as time goes on, the situation worsens and becomes increasingly hard to control.

Debt crisis: When a nation or company takes on excessive debt, the pressure of repayment grows heavier.

To meet obligations, they may be forced to sell off assets, which drives asset prices down and raises borrowing costs, pushing them deeper into a debt crisis.

So, "death spiral" is a vivid metaphor used to describe a process of continuous deterioration.

Let's first talk about the part everyone can see: the government shutdown.

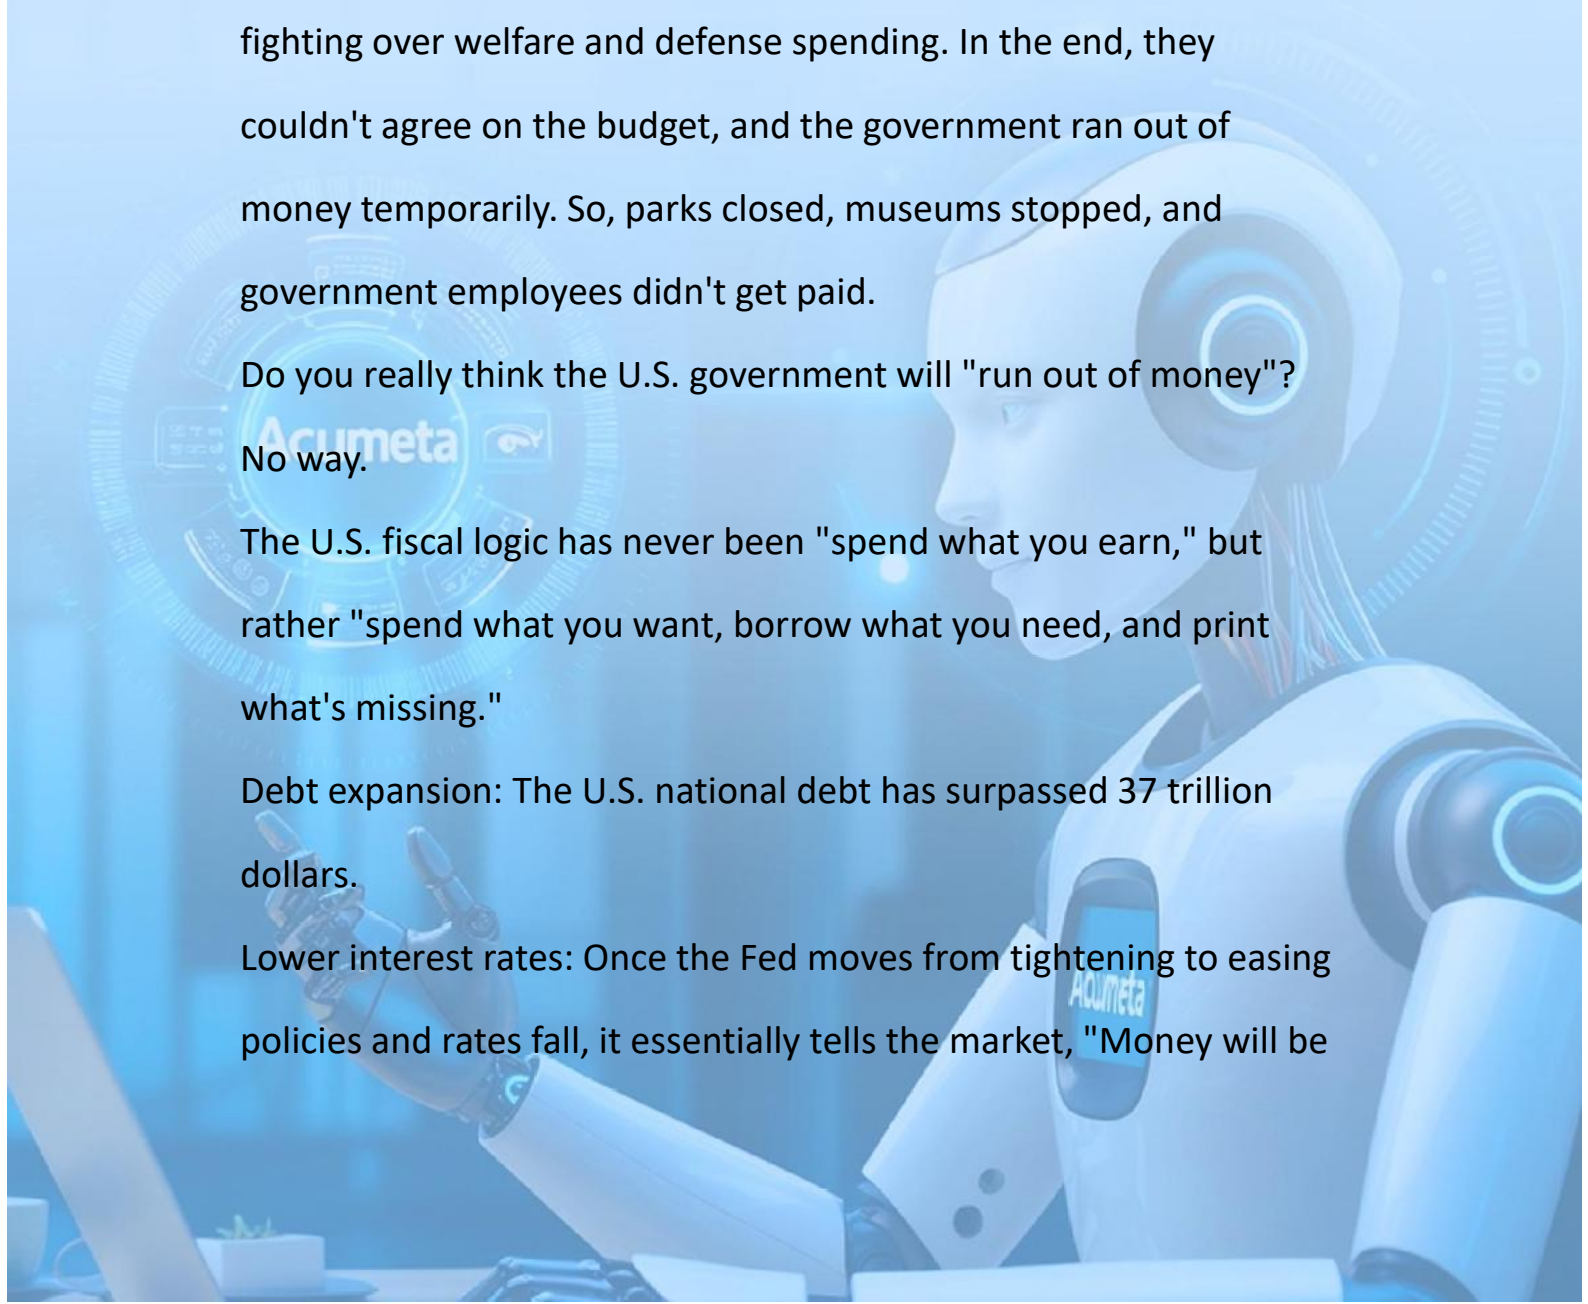

Congress bickers back and forth, with Republicans and Democrats fighting over welfare and defense spending. In the end, they couldn't agree on the budget, and the government ran out of money temporarily. So, parks closed, museums stopped, and government employees didn't get paid.

Do you really think the U.S. government will "run out of money"?
No way.

The U.S. fiscal logic has never been "spend what you earn," but rather "spend what you want, borrow what you need, and print what's missing."

Debt expansion: The U.S. national debt has surpassed 37 trillion dollars.

Lower interest rates: Once the Fed moves from tightening to easing policies and rates fall, it essentially tells the market, "Money will be

cheaper, and borrowing will be easier"

The printing press starts again: To keep the government running, it will directly or indirectly release more liquidity.

Of course, it's not about digging up gold beneath Capitol Hill, but relying on issuing government bonds and leveraging the dollar's global dominance to shift the risks.

Printing money is not without consequences.

An increase in the money supply inevitably leads to a dilution of value. While the U.S. dollar remains the global reserve currency, in the long run, this is a game of "chronic inflation."

I have an old friend in California, and back in the 90s, he could fill up an entire cart at Walmart for \$50. But today, with the same \$50, you can't even pay for a Costco membership. The money is still the same green bill, but its purchasing power has deflated like a balloon losing air, becoming more and more deflated.

The dollar is the same. On the surface, it still reigns as the global currency for settlement, but in reality, it's slowly bleeding out.

The current voting on the budget bill by Congress is actually a battle over wealth distribution

But in the end, every vote on the budget is like a pair of scissors, cutting future wealth into pieces and distributing it to different

groups. And these scissors don't come out of nowhere; they are paid for by future debt and the depreciation of the dollar's value. It's like a family discussion: the kids want a new iPhone, the wife wants a new car, and the father wants to renovate the kitchen. In the end, they all agree to charge it to the credit card. Everyone's happy while swiping, but when the bill comes, the interest won't let them off the hook.

The U.S. government shutdown is a political drama, but the underlying fiscal deficit and money-printing logic are the true wealth secrets we need to understand.

As members of the Quantitative Winners Legion, we cannot focus only on short-term fluctuations but must recognize the long-term trends.

The harsh reality is that the U.S. federal government's shutdowns and restarts have become a political norm.

The uplifting part is that every shutdown and budget negotiation leads to a new round of money printing and liquidity release. This is precisely the golden opportunity for us to capture profits in the financial markets, especially the crypto market.

But let's not forget, the U.S. is not a third-world country, and it can't shut down indefinitely. If the government stays shut for too long, the financial markets will experience violent turbulence, credit ratings may decline, and public opinion will turn against them. The final result is often compromise—through a new budget bill. Once the bill is passed, fiscal spending restarts, and the printing press begins to roll again. The real signal is the restart: a new round of dollars will be released.

In the world of digital assets, Bitcoin is the "digital gold" that acts as a hedge against inflation, while Ethereum is the "digital operating system" that supports countless applications.

Every time the U.S. government faces a budget deadlock, and every time the dollar is forced to be printed more, it becomes fuel for the rise of BTC and ETH.

The 2020 pandemic is the best example: the Fed's unprecedented liquidity injection directly pushed Bitcoin from \$4k to \$60k.

At that time, many people missed out because they didn't have the courage to buy. The same question now faces you today:

When the congressional budget bill is passed and the printing press restarts, do you have Bitcoin in hand?

In the currency surfing diversification strategy, have you already accumulated enough profits?

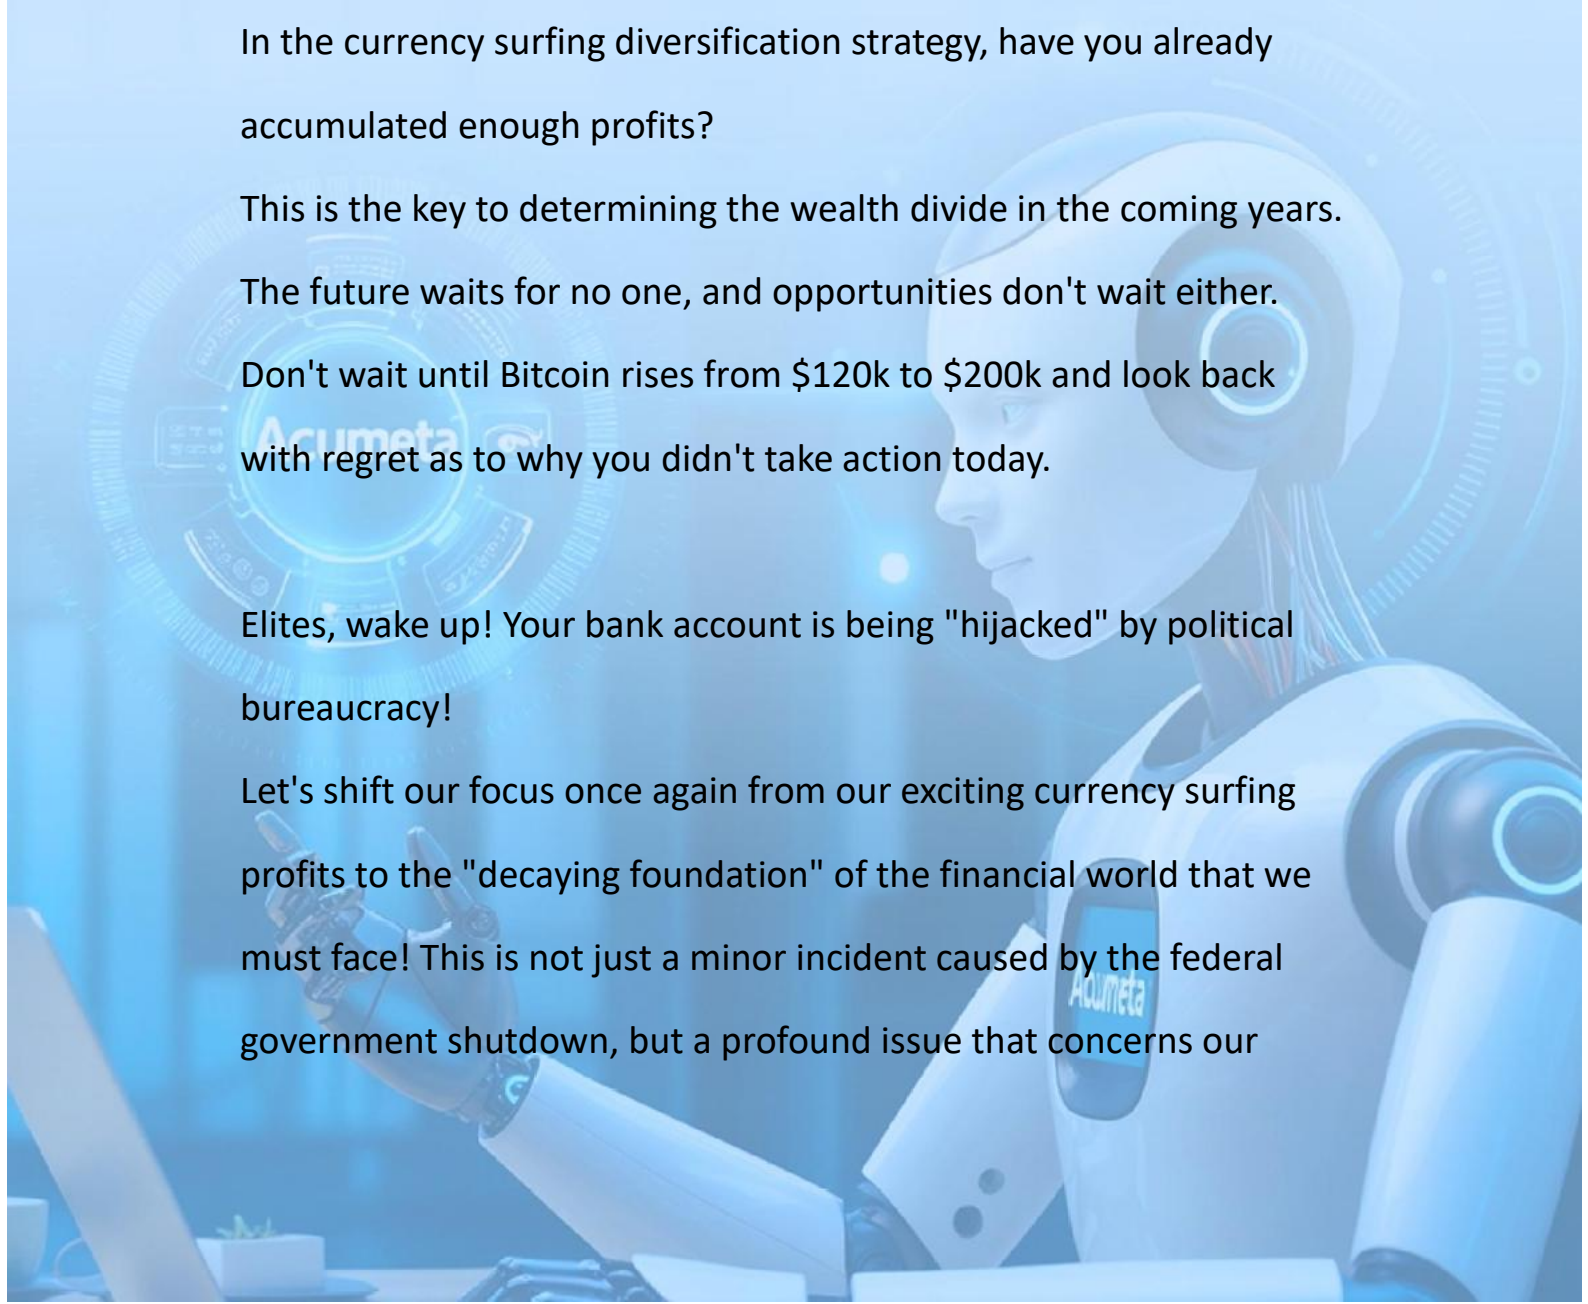

This is the key to determining the wealth divide in the coming years.

The future waits for no one, and opportunities don't wait either.

Don't wait until Bitcoin rises from \$120k to \$200k and look back with regret as to why you didn't take action today.

Elites, wake up! Your bank account is being "hijacked" by political bureaucracy!

Let's shift our focus once again from our exciting currency surfing profits to the "decaying foundation" of the financial world that we must face! This is not just a minor incident caused by the federal government shutdown, but a profound issue that concerns our

wealth security, financial efficiency, and future direction.

Many of our members have told me that they've encountered obstacles with their bank wire transfers. It's not that they don't have money, but that their money is stuck in the bank and can't be transferred out. Why?

Because of the federal government shutdown, some regulatory and financial backend departments are unable to operate normally, and the bank's clearing and transfer processes are being restricted.

It's like you're ready to catch a wave of profit, but the car won't start because the gas station says the system is down. Isn't it absurd?

Isn't it frustrating? This is the biggest flaw of the centralized banking system: it doesn't serve your efficiency, but rather serves the system, the rules, and the processes of certain institutions.

In this digital age of the 21st century, we can order food with just

one click and have it delivered to our doorstep in 10 minutes;

we can video call someone on the other side of the world in just a few seconds;

but when we want to transfer hundreds of thousands, or even thousands of dollars to another country's account, we may have to wait for days, submit a pile of documents, and even check whether the bank is "open for business" today.

It's like living in a mansion, but every time you go out, you have to wait for the butler to unlock the door. The key isn't in your hands, it's in someone else's.

We must ask: is this system really suitable for the future of global financial transactions?

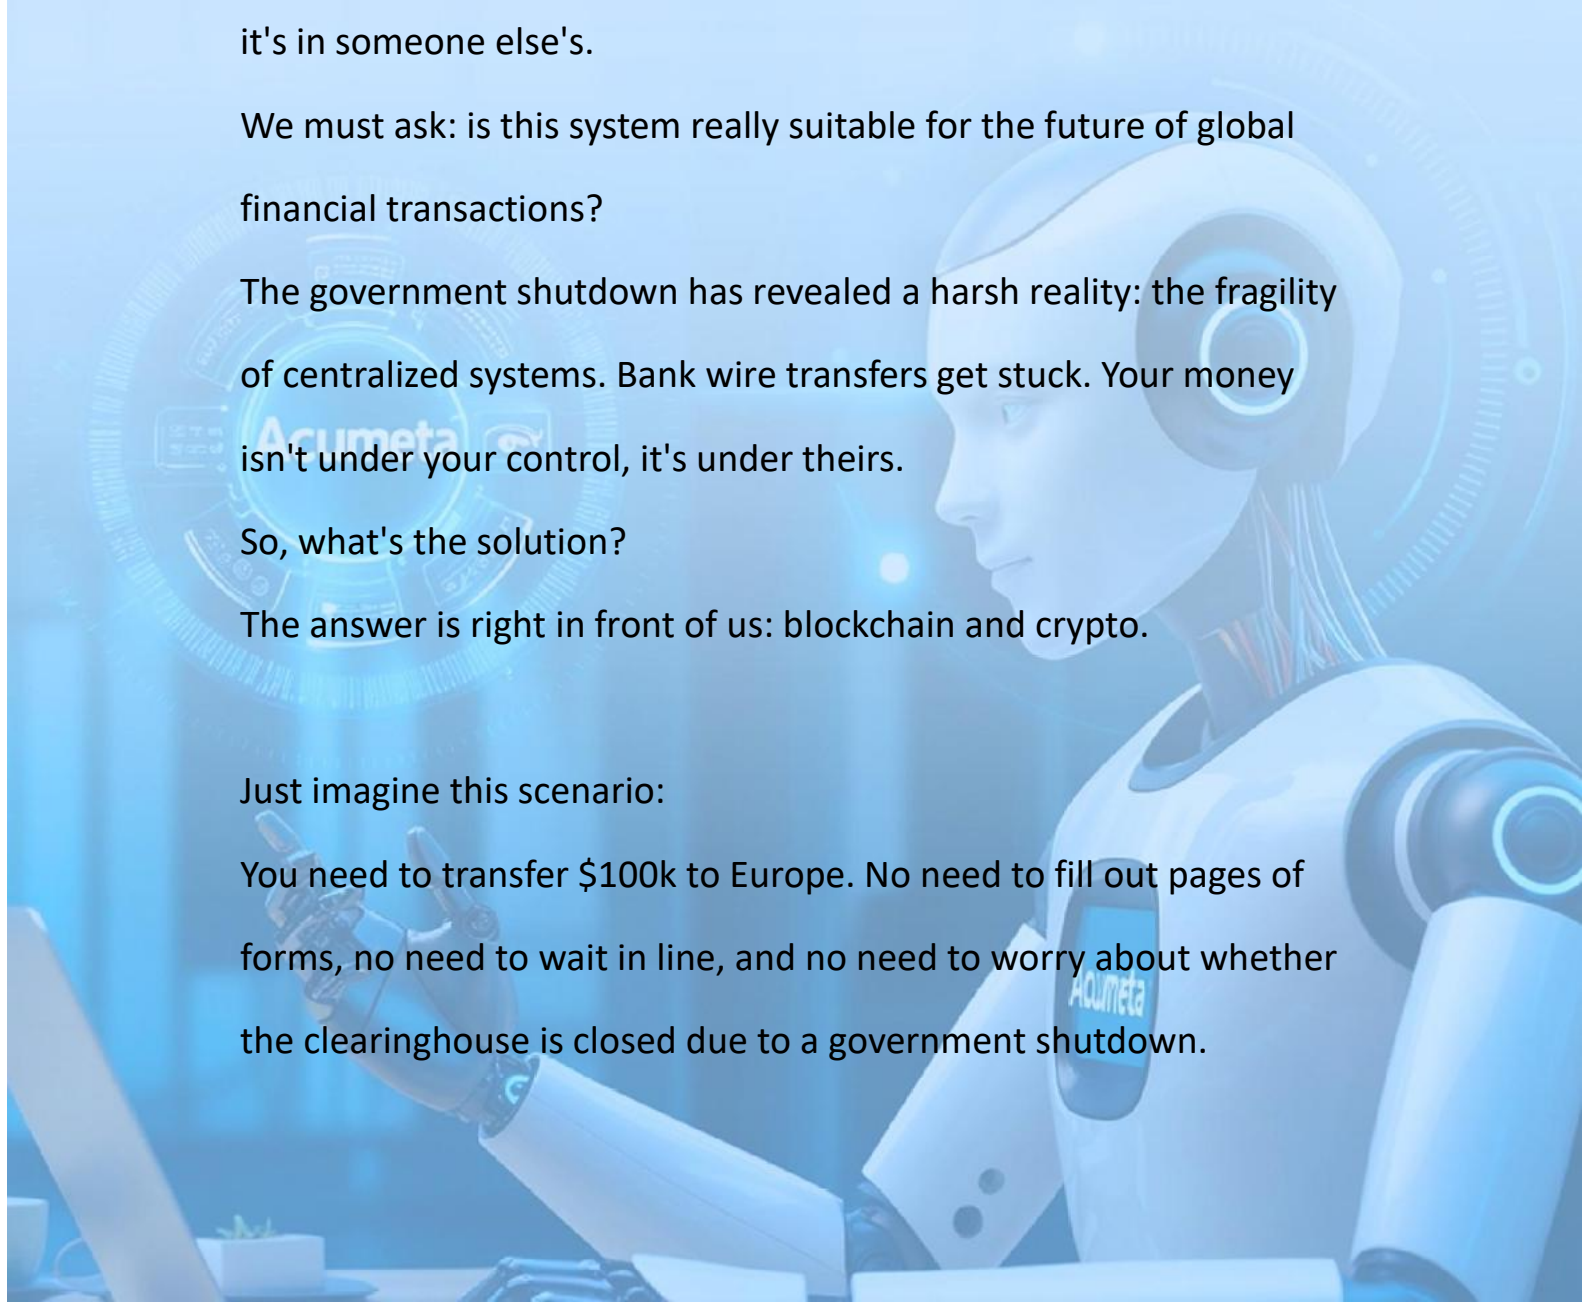

The government shutdown has revealed a harsh reality: the fragility of centralized systems. Bank wire transfers get stuck. Your money isn't under your control, it's under theirs.

So, what's the solution?

The answer is right in front of us: blockchain and crypto.

Just imagine this scenario:

You need to transfer \$100k to Europe. No need to fill out pages of forms, no need to wait in line, and no need to worry about whether the clearinghouse is closed due to a government shutdown.

All you need to do is open your wallet, enter the address, press the confirmation button, and within minutes, the funds will be transferred—traceable, secure, and transparent.

This is the power of blockchain—barrier-free, fast, convenient, secure, and efficient.

Some say blockchain is the "financial version of the internet." While internet technology broke down the barriers of information, blockchain technology is breaking down the barriers of capital.

I know some people will say, "Yeah, blockchain sounds cool, but I'm not fully convinced yet"

Let me ask you: Do you truly trust banks? Do you truly trust those politicians arguing in Congress over the budget?

You've seen how just a few days of government shutdowns can lock up your funds; you've seen how decisions by the Fed can devalue your savings at any moment; you've seen how inflation caused by

money printing erodes your purchasing power year after year.

Blockchain gives us an opportunity: to take our wealth back into our own hands, and to make freedom no longer reliant on any centralized institution.

Let me share a vivid comparison case:

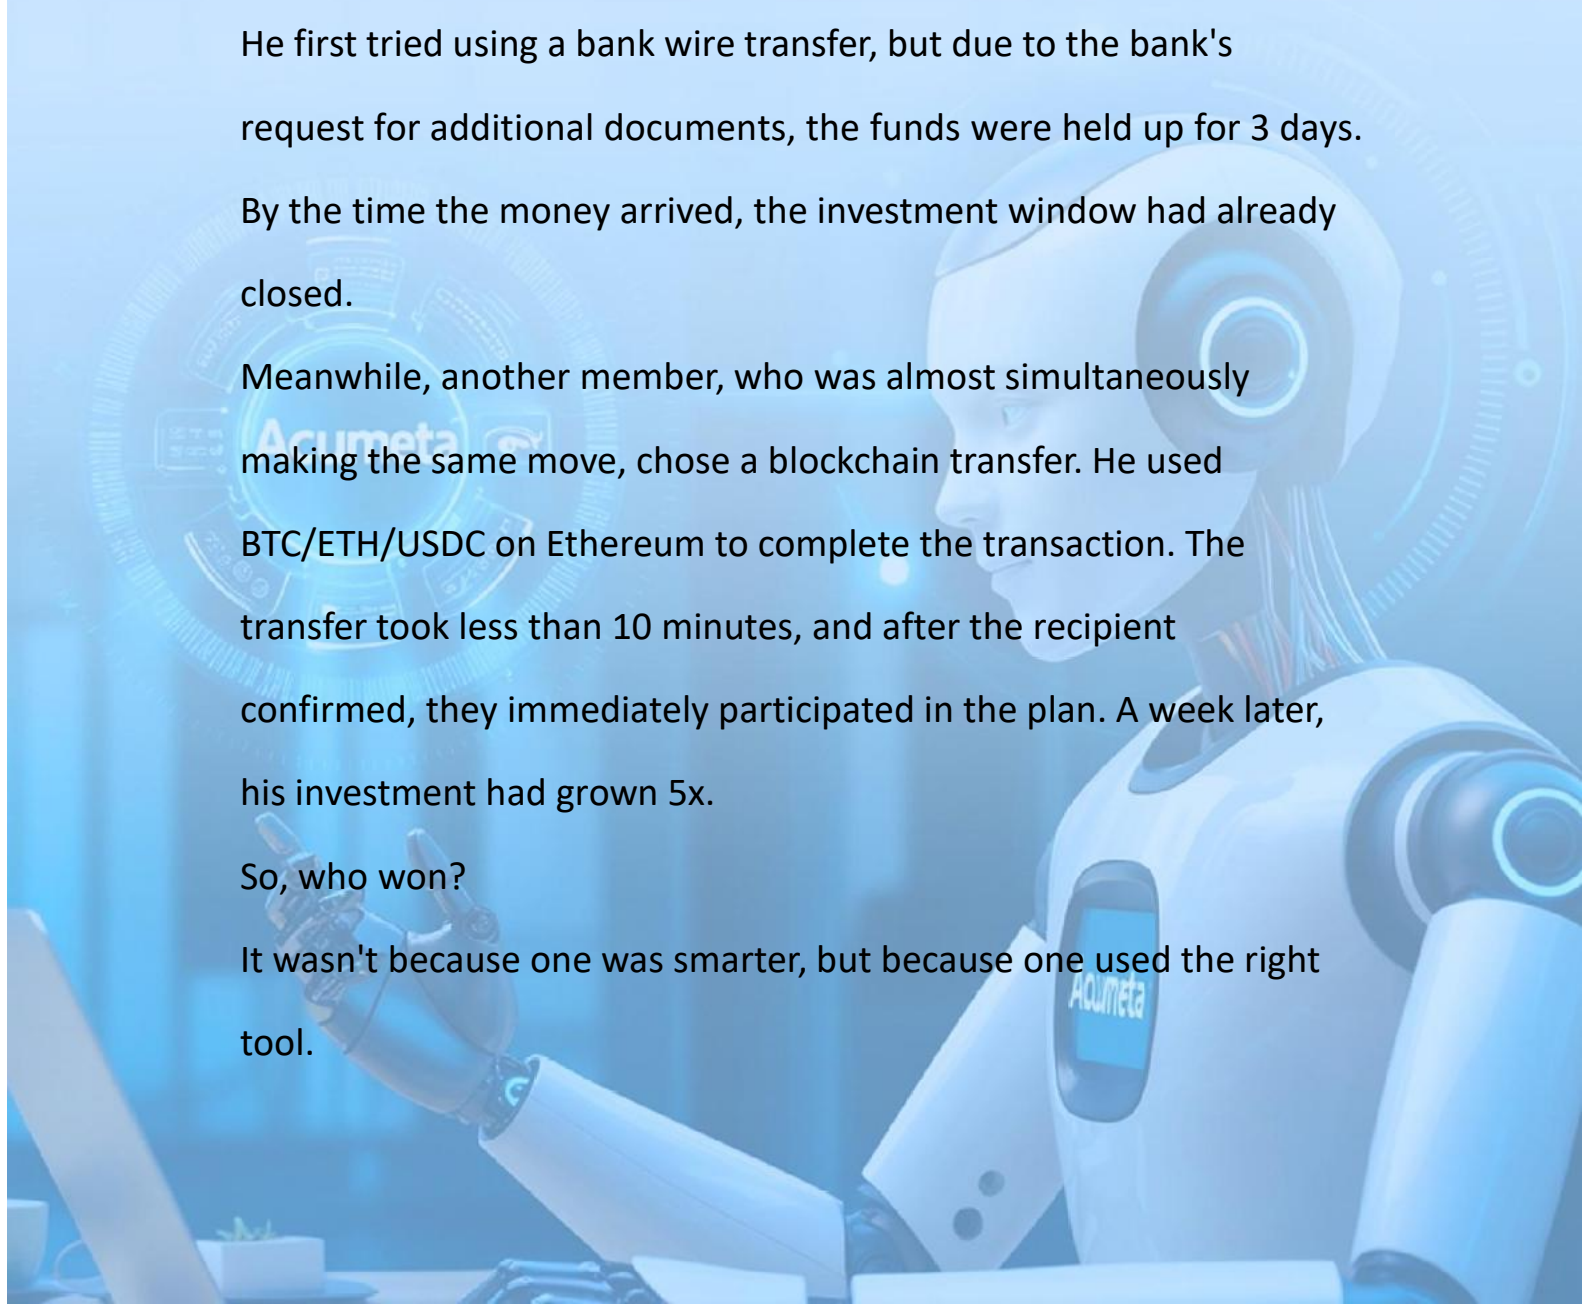

A member of the Winners Legion from Boston needed to transfer \$500k quickly to invest in this week's 1000% opportunity in the currency surfing diversification strategy.

He first tried using a bank wire transfer, but due to the bank's request for additional documents, the funds were held up for 3 days. By the time the money arrived, the investment window had already closed.

Meanwhile, another member, who was almost simultaneously making the same move, chose a blockchain transfer. He used BTC/ETH/USDC on Ethereum to complete the transaction. The transfer took less than 10 minutes, and after the recipient confirmed, they immediately participated in the plan. A week later, his investment had grown 5x.

So, who won?

It wasn't because one was smarter, but because one used the right tool.

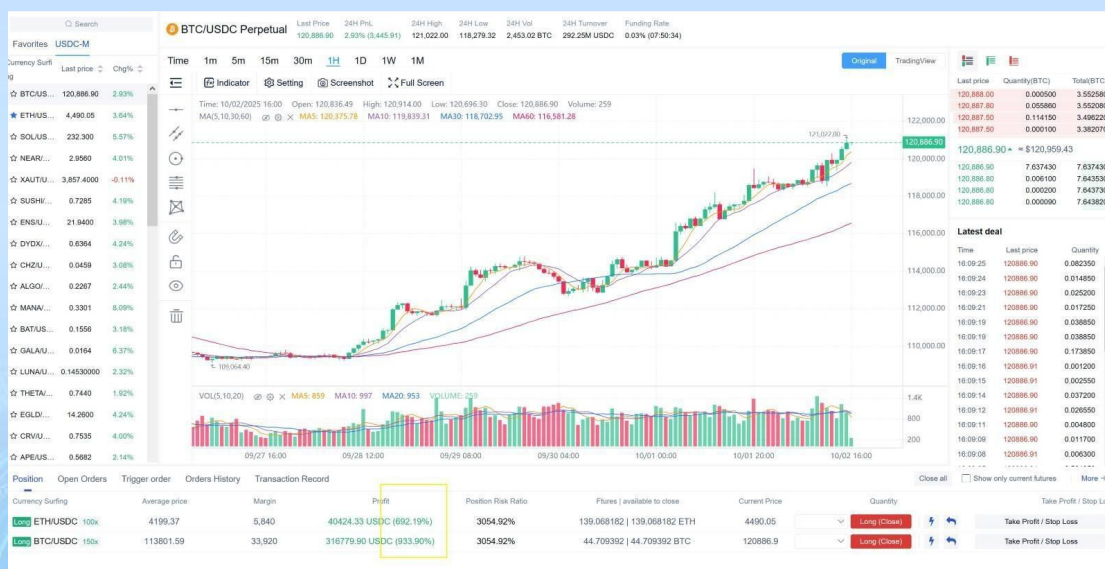

This is the key to future wealth differentiation: it's not about the knowledge gap, it's about the tool gap.

Stop complaining about the inefficiency of bank wire transfers, stop grumbling about the absurdity of government shutdowns. Future wealth is never won through complaints, but through choices.

I urge everyone here: move traditional assets to on-chain assets, and let your wealth enter the realm that truly belongs to you.

Beneficiaries of the Quantitative Winners Legion:

This week, the Bitcoin and Ethereum diversification strategy has already achieved over 900% returns, as shown in the chart, fully validating Acumeta's assessment from Monday;

At the same time, we've also accumulated multiple profits in short-term contract surfing, making it a bountiful week.

Despite the non-farm payroll data being withheld due to the federal government shutdown on Friday, our profits will only increase, not

decrease!

Because we seized the opportunity, the evening's currency surfing short-term signals have reached the time to claim. Please contact my assistant immediately to receive the corresponding Quantitative Winners Legion signal;

If your signal frequency is restricted, please top up and upgrade it promptly;

If you meet the criteria for an advantageous position, continue to receive the diversification strategy details.

The Q4 Crypto Ode to Joy is now blooming with a harvest of opportunities, do not doubt your decisions, take action, and see you on Friday! Wishing you a wonderful evening!
