

## Friday, Oct 3, 2025

Dear strategists of the Quantitative Winners Legion! Friday marks an unprecedented day!

We are witnessing a "rare event" in financial history: the non-farm payroll report, known as the "king of data," is absent due to the Washington drama—the government shutdown! This is the first time in the past 12 years!

Core conclusion: A data vacuum is the "golden hunting ground" for the "Quantitative Winners"! Wall Street and global markets have suddenly fallen into a data vacuum. Friends, imagine you're driving on the highway, and suddenly your GPS disconnects and your dashboard goes black, what would you do? This is the current state

of the market—losing its most critical directional signals. The interesting part is: when information is opaque and the government fails to provide clear guidance, truly smart capital and visionary investors are more likely to stand out. Because when others are lost, you can find the beacon ahead of time. So, who is the beacon in tonight's market? The answer is right in front of us—Bitcoin.

Look at the trend of Bitcoin! Right in the midst of the data vacuum, it surged past \$121,000, igniting October's market to new heights.

You might have heard of the term: "Uptober"— October as the month of uptrends.

This is not just slang, but a seasonal pattern that has been validated in several past years. Just like farmers who always enjoy a bountiful harvest in autumn, savvy investors often see the crypto market explode during this quarter.

What we're seeing today is not just a breakthrough of \$121,000, but the huge potential for a push to \$135,000 next week.

Why is this happening? Friends, let me simplify this complex issue: the Fed's rate cut is nearly a done deal. Without the interference of non-farm data, the market is more focused on the already obvious trend—weak employment, easing inflation, and a continuously expanding fiscal deficit. The government shutdown has served as a reminder to Wall Street: the core issue of the U.S. economy is not the employment numbers in a table, but the government's reliance on money printing and debt to keep functioning.

The Fed has no reason not to continue releasing liquidity. And as long as liquidity is released, asset prices will have support.

The dollar will depreciate, and the assets that most directly benefit are often decentralized assets like Bitcoin and Ethereum.

I have a friend who owns a vineyard in California. Every year, when autumn arrives, he always says, "You can't control the weather, you

can't stop the wind and rain, but the harvest depends on whether you planted the vines in advance." Today's rise in Bitcoin is a true reflection of this saying. The absence of non-farm data, the government shutdown, these are like changes in the weather that you can't control. But if you had positioned yourself in Bitcoin and Ethereum months ago, tonight you'd be the farmer enjoying the fruits of your labor, making wine and celebrating.

We must remember that wealth doesn't wait for you to be ready, it often appears in times of chaos and uncertainty.

Think about it, for the past 12 years, non-farm data has never been absent, but this morning it suddenly disappeared. Many people panicked and hesitated to act.

But Bitcoin? It tells us with a rising K-line chart: the absence of data does not mean the absence of wealth.

## Acumeta 💿

How should we interpret the opportunities on Friday and the weekend? I will give you three key points:

1. The government shutdown reminds us of the fragility of traditional data. When systems depend on political negotiations, investors must find new anchor points. And the blockchain world, operating around the clock and circulating globally, is exactly such an anchor point.

- 2. The certainty of rate cuts has greatly increased. The absence of non-farm data has made the market's expectations of the Fed more aligned, providing a solid foundation for risk assets.
- 3. Bitcoin is on a historic trajectory. \$121,000 is not the end, but the beginning of a new cycle.

If you look back at the bull markets of 2017 and 2021, you'll notice that once prices break through psychological barriers, market sentiment is completely ignited.

\$135,000 might be the next spark.

In an uncertain world, the only certainty is humanity's pursuit of value and freedom. The absence of non-farm data will only make the Fed's rate cuts more certain! Bitcoin's surge will only make our "currency surfing diversification strategy" even more successful!

What we're discussing on Friday is a true harvest season—not the

rice in the fields, nor the apples in the orchard, but the wealth harvest that belongs to us within the currency surfing diversification strategy!

Looking back at this week, in our Bitcoin diversification strategy, with just 5%—15% of capital allocation, we achieved over 800% in profit from a single allocation in just 5 days.

What does this mean? You invest 1 dollar, and after five days, it returns as 9 dollars; you invest \$100k, and after five days, it could become \$900k! This kind of return isn't a fantasy; it's the reality we seized together through market volatility.

Pals, can you clearly see the incredible opportunities that market fluctuations bring?

The same story unfolded with Ethereum. This week, its currency surfing diversification return exceeded 600%.

With both Bitcoin and Ethereum both surging, it's as if the entire market is telling us: as long as you're willing to act proactively, as long as you dare to maintain balance amid the waves, and seize the big money diversification opportunities, you can experience your own wealth celebration.

Money never sleeps, and neither should your strategy.

This week's currency surfing with large capital diversification is the

perfect example: precise timing, reasonable position sizes, and market volatility all combined to achieve results in just 5 days that others would struggle to reach in an entire year.

Why does currency surfing bring such returns? The logic behind it is not just about "betting on luck," but rather 3 clear core principles: First, diversification.

Many people think investing is about going all in and betting everything.

But true high-net-worth players understand that diversification is both defense and offense. By allocating just 5% to 15% of our funds, we seem cautious, but in reality, we are minimizing risk while maximizing potential. It's like playing poker, you can't bet all your chips on one card. Instead, you need to use a small portion of your chips to test the market's mood and then go all in at the right time.

The 800% profit in 5 days didn't come from blindly chasing the market, but from precisely entering at the right time with Bitcoin. Many people complain about always getting stuck in a position, but the reason is that they can't read the market rhythm. It's like dancing—you have to step to the beat, or you'll mess up. The greatest value of the BTC/ETH currency surfing diversification plan is that it helps you catch this rhythm.

Third, Compound effect.

Don't underestimate an 800% or 600% return. When these returns are compounded through multiple trades, it's like a snowball rolling downhill, it just keeps growing. Some say that compound interest is the eighth wonder of the world. If you can capture 3 similar opportunities in one month, your wealth could experience an exponential leap.

We are in the harvest season of October. When you see the profit curve in your account rising and falling like the golden waves of wheat, don't you feel excited? Won't you be glad that just a few days ago, you bravely planted that seed?

Yesterday was an exciting and joyful day, as the frequent trading signals from currency surfing brought us so much happiness.

Pals, the weekend is approaching again, and I hope you fully enjoy the beautiful moments that money brings you, seeing family reunite, the close bonds of friendship between loved ones, and the innocence of children, that's the call of the future.

At this moment, do you also realize that if wealth could speak, it would urge these messengers of the future to carry forward the legacy of values, hope, and the flourishing of prosperity? That is the most fulfilling ending to life.

Those who plan ahead have already joined the Quantitative
Winners Legion! Only this unique charm of wealth inheritance.
Clearly, what's even more thrilling is that Thursday's Q4 Crypto Ode
to Joy is having such a positive impact, thanks to the market's
sufficient activity and space for growth.

Let me ask you: how many currency surfing signals did you capture yesterday? How did your profit targets perform?

Acumeta's personalized private service aims to maximize the potential profits for each Quantitative Winners Legion membership level, while ensuring that higher-tier members are supported in creating wealth miracles!

When your trading funds are \$50k, Acumeta will send services intermittently within this week, based on preset frequency

conditions. Once your service ends, you can review the profit value of the signal service and assess its reliability. If you no longer receive signal services, it indicates that you should upgrade your signal level.

When your trading funds are \$500k, Acumeta, based on preset conditions, will apply reasoning to evaluate the highly active currency surfing market and make an appropriate assessment for diversified trading. This will bring initial attempts to expand profit scale, while capturing more signal frequencies to take advantage of the active currency surfing profits this week.

When your trading funds are \$5,000,000, Acumeta's preset conditions will expand to track all opportunities in the crypto market. We invest more manpower, resources, and efforts, hoping that such members can earn even more profit. Therefore, diversified trading, various types of currency surfing, wealth management fund

compounding, and smart custody services are all included during the agreement period. We aim to find the best profit breakout points, ensuring both steady growth and explosive growth, all thanks to the participation in multiple frequencies.

Pals, have you found the best way for yourself to participate in this?

Pals,

Today, we're going to dive into a core tool that can truly change your investment efficiency, life rhythm, and even the way you understand wealth management – the [smart managed copy trading system].

This is not an empty concept, but an intelligent tool that can help you firmly establish yourself in the financial waves.

It has been continuously running in our high-level unlocked services and is helping many members achieve faster, more stable, and more convenient wealth accumulation than ever before.

We always say, "Time is money," and in the world of investment, time is even more importantly the engine of compound interest.

But in reality, how many people can keep an eye on the market 24/7?

How many can execute complex data analysis, market fluctuations, and strategy adjustments with precision in real time?

This is almost an impossible task. As a result, most people fall into a

paradox: either sacrifice their life and stay glued to the screen all day, or miss opportunities, helplessly watching the market pass them by.

This is the very reason why the [smart managed copy trading system] exists.

It was born to solve this century-old problem.

We all know Elon Musk. He is not only a tech fanatic but also a pioneer in changing the way the world lives. His wealth recently surpassed \$500 billion, once again topping the global wealth rankings.

So how has he accumulated such wealth? The core lies in the "autonomous driving" he has promoted.

10 years ago, who could have imagined that cars could one day drive themselves on highways? Who could have imagined that many people who are unable to drive due to vision problems or physical limitations could regain their freedom to travel? This is the revolutionary change brought by automation. It saves ordinary people time and energy while also providing them with unprecedented safety and comfort.

In the field of investment, the [smart managed copy trading system] plays the same role as "autonomous driving." You no longer need to

stay up late watching the markets, nor do you need to worry about missing the best buy or sell points because of work or family matters. The system will automatically execute trades based on the strategies you authorize and the configurations you select, even faster and more accurately than you could manually.

The most valuable asset is not the eyes, but the tools. How to use systems and automation tools to free yourself, allowing you more time to think about strategies, spend time with family, and m aintain a clear mind. The [smart managed copy trading system] follows the same logic for us. What it helps you achieve is not just an increase in profits, but more importantly — it gives you back a sense of "control over your life."

You no longer have to miss your child's soccer game to catch the market movements, nor do you have to skip an important business meeting to monitor trades. Because your assets are already being managed by a system that is more stable, calm, and efficient than you.

The [smart managed copy trading system] is like your "professional chef" in the investment world. You give the direction, and it takes care of the execution details. In the end, all you need to do is enjoy the results.

In the future, the [smart managed copy trading system] will continue to evolve, integrating more AI reasoning models, predicting market trends more accurately, and intelligently configuring asset portfolios. This will allow investors to truly achieve a deeper meaning of "financial freedom" — not how much money you have, but how much free time you have.

Please contact official customer support for assistance in unlocking this important tool!

The final call: to the warriors of the Quantitative Winners Legion

This week, we've answered an age-old question with unshakeable

facts: In the market, is it luck that decides, or is it skill?

With our Bitcoin and Ethereum diversification strategy, the brilliant

layout, and textbook execution—we not only achieved the expected

hefty profits, but more importantly, we locked in a majority of those

profits.

We are here to hunt, not to rely on luck! We're not speculating, we're dominating!

However, let's be honest, not everyone can easily board this ship. If you haven't met the large capital advantage position evaluation standards, you really can't access these signals.

But that doesn't mean opportunities are forever out of reach.

Because next week, with the remaining time in October and the Q4 Crypto Ode to Joy, there will still be chances in a few small windows for those who are prepared to seize them. The profits locked in today, the victories of today, are just the prelude. The real show is yet to be performed in the coming quarters.

It's still not too late for you to top up and join. The various benefits and unlocked signals after the legion upgrade won't permanently disappear just because you're one step late. The key is, do you have the courage to reach out and grab the opportunity when it arises? Elon Musk, with his \$500 billion in wealth, shows us that the future belongs to those who dare to break through. This afternoon, we'll discuss the insights gained from his wealth accumulation. See you then!

Elites of the Legion, give yourselves a round of applause! Get moving! With the celebratory spirit of popping champagne, let me

Welcome back to the headquarters of the Quantitative Winners Legion, a battlefield of capital and a palace of wisdom.

In the past week, the U.S. federal government shutdown, the non-farm payroll data was absent, and the entire market temporarily fell into what is known as an "information vacuum." For many traditional investors, this means uncertainty, fear, and they don't know how to proceed.

But in this very context, our Quantitative Winners Legion has delivered an answer that has left everyone speechless.

Look at Bitcoin, it briefly surpassed \$122,000 on Monday, then look at Ethereum, approaching \$4600! This is a historic-level market movement, a moment that no active investor in the market could miss. And our Legion not only saw this wave, but we also seized it with our own hands.

In the short-term currency surfing, we captured the intraday rhythms multiple times and reaped steady profits; meanwhile, in the more crucial BTC/ETH diversification strategies, clients with large capital earned over 800% profit!

This isn't a fantasy or a theoretical projection, this is real money that has landed in real accounts. Pals, this is the happy result of the week!

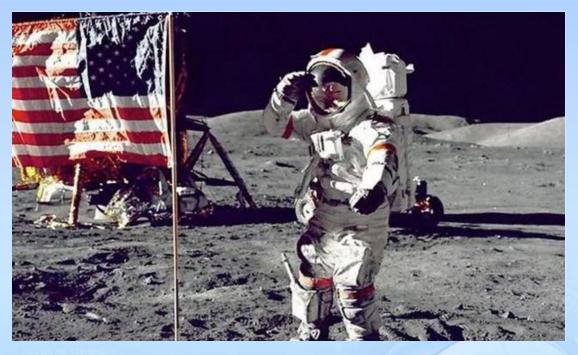

But what I want to emphasize is that the true value doesn't just lie in those beautiful numbers. Because numbers are just the outcome, and what they reflect behind the scenes is our mindset, our attitude toward the market, and most importantly, our understanding of the future.

During this week, with the government shutdown, I received inquiries from several friends in traditional finance. They were anxious, confused, and some even said, "It's over, the data is gone, the reference points are gone, the market is going to fall apart." I laughed. I told them, "Bro, the market will never stop because of a data shutdown. True wealth opportunities always belong to those who can see trends from different dimensions."

Let me tell you a little story, in the 1960s, when the U.S. Apollo

Moon mission was launched, scientists encountered a problem: traditional pens couldn't write in space because there was no gravity to push the ink.

So NASA invested millions of dollars to develop the so-called "space pen." But what were the Soviet cosmonauts doing at the same time? They simply brought a pencil to space. Friends, this is the difference in mindset.

Some were waiting for a complex solution, while others seized the opportunity using the simplest method. The market is the same.

While others are waiting for the government to reopen, waiting for data updates, our legion has already locked in the trend ahead of time using quantitative models and financial strategies.

That's why, when Bitcoin broke through 122k, we were the winners at the front of the stage; that's why, when ETH approached 4600,

we firmly grasped over 800% in returns.

#1	=	Elon Musk	\$499.1B \$8.3B	54	United States	Tesla, SpaceX
#2	•	Larry Ellison	\$350.7B \$9B	81	United States	Oracle
#3	•	Mark Zuckerberg	\$245.8B \$5.8B	41	United States	Facebook
#4	•	Jeff Bezos	\$233.5B \$936.8M	61	United States	Amazon

What I want to emphasize is this: The value of the legion isn't just in helping you make money. Making money is just a superficial result; the true essence lies in how it changes the way you interact with the market. Traditional investors stare at screens, rely on intuition to place orders, and depend on luck to stop losses.

But what do we do? We use the Acumeta model to capture the market rhythm, logic to allocate positions, and strategies to create a sense of security. In other words, others are rowing with their hands, while we are sitting on a smart yacht, engaging the autopilot.

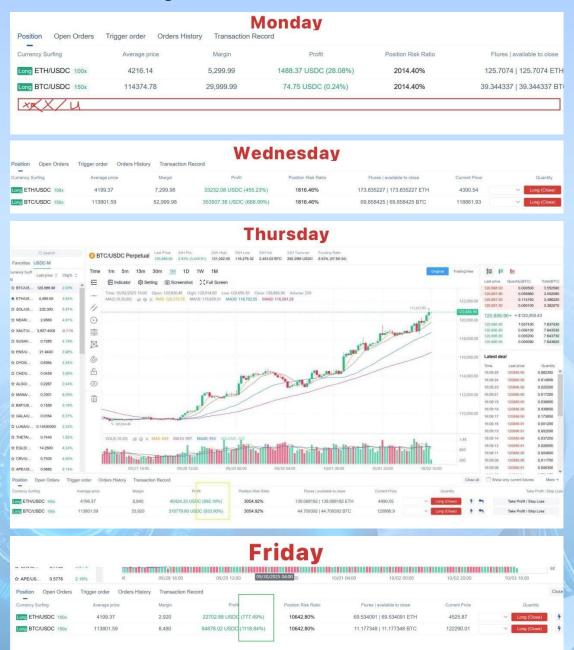

This is actually quite similar to Musk's wealth logic. Why is he worth over \$500 billion today, sitting at the top of the world's wealth rankings?

Because he dared to act ahead of time, turning his vision of the future into today's reality.

He made Tesla synonymous with electric cars, used SpaceX to revolutionize rocket launches, and brought self-driving cars into

millions of homes. How many people, once confined due to limited mobility, have now regained their freedom and dignity thanks to autonomous driving?

Isn't this very similar to the quantitative management and diversification strategies we use? What we help with is not just investors' accounts, but their life's time. They no longer need to stay up late watching the markets, nor do they need to lose sleep over

They can spend time with their children, play a round of golf, enjoy life, while still having their wealth continuously generated in the background.

This is the value of the smart managed copy trading system, this is the advantage of the Legion.

In the financial markets, it is often human emotions that are complex, while logic tends to be simple. What the Legion helps everyone do is strip away the complexities of human nature, place the simplest logic in the most appropriate place, and create the most extraordinary results.

This week's results are not the end, but the beginning.

The government shutdown? Data absence? For others, these may be obstacles, but for us, they are actually validation. It proves that even in the so-called "vacuum period," as long as logic and strategy are in place, we can still make wealth run.

As time moves on, like water flowing, the passing moments are always so nostalgic, today is Friday again!

Whenever the tune of [FRIDAY] plays, I always find myself reflecting on a question:

Have our efforts this week truly been rewarded by the results we've

If all of this hasn't happened yet, then how should we spend this winding journey of life?

Clearly, a few of our Quantitative Winners Legion shareholder members are showcasing the incredible frequency of Acumeta signals, witnessing this week's exciting currency surfing profits, telling their stories of getting closer to their profit goals with joy.

Of course, some of the smaller-tier members of the Quantitative Winners Legion face limitations with signals, which has restrained

them from maximizing their potential profits through Acumeta signals and diversification strategies. This has been a regrettable week.

If you reflect on all of this today and feel unsatisfied, then take some new steps and actions to recharge!

Why is the volatility of currency surfing larger at this crucial historical moment?

#The digital currency market's trading is purely a matter of opposing viewpoints and power struggles between the bulls and the bears.

Whenever a trade occurs, whether our Quantitative Winners Legion members are actively participating or other traders involved in contract trading in the market, everyone is observing market fluctuations, seeking new potential trading opportunities. Therefore, when we buy long positions, there may still be short-term declines or oscillations because the forces of the bears might be trying to seize that victory.

Similarly, when we buy short positions, there may still be short-term increases because the forces of the bulls might be trying to claim that victory.

Thus, currency surfing entirely relies on volatility and the price differences it creates, which generates profits from those price

#The correct direction leads to the right outcome. Therefore, one must first have awareness of the potential risks from volatility, and actively prepare for larger trading capital. Only in this way can we truly ensure safety, be proactive, objective, and dialectically view the profits from currency surfing trading!

Why does the Acumeta signal focus on one or a few key trading signals?

First, EEM/USDC, as the proprietary contract of the exchange, is similar to Binance's BNB. Its existence is like the relationship between the Nasdaq index and the Nasdaq exchange. It is a highly comprehensive and reasonable assessment of the pricing power of the trading center, reflecting the trading volatility changes from global players. Therefore, this contract is one of the most active in the market.

And the active factors in currency surfing, its activity is a key safeguard for the profit spread to occur.

Of course, including Bitcoin contracts, the currency surfing signals, due to the important status of this crypto and its extremely high price factor, we guide through assessing the big funds advantage of the Quantitative Winners Legion members. All of this is done to

ensure reasonable diversification in trading and safeguard the generation of secure profits.

Therefore, if you receive the Acumeta signal, it means that this is the most suitable time to perform currency surfing at this moment, much like if every stock trade were to buy Nvidia, there would be no need to ask why I should still buy Apple, Microsoft, or similar stocks. This is the result of Acumeta's choices in currency surfing. Obviously, the purpose of the trade order is to achieve profit with that order, not just to create an order, what do you think, pals?

All profits in trading come from well-prepared strategies and forward-thinking, rigorous scientific logic positioning. The charm of digital currency currency surfing lies in its selection:

- 1. Trading its unique flexibility
- 2. Trading its highly free volatility
- 3. Trading its short-cycle convenience for locking in profits
- 4. Trading its superiority in maximum funding and safety guarantees

5. Trading its frequent signals and high success probability.

#I have never been someone who gives up easily. Just as in your life's journey, there's never a page where you chose to give up yet still achieved today's success.

#Looking back at all of this, you will not move forward without motivation, nor will you easily dismiss your choices. Look at the continuously rising Quantitative Think Tank Center token FGT, whose market value is approaching 1.5 billion. We are halfway to our goal of surpassing 3 billion!

The symbol of a Quantitative Winners Legion membership, and the absolute advantage, is even more prominent for shareholder members!

Long-term plans always start with each success we achieve right now!

Take a look at the guarantees in our upgrade agreement, which is designed to achieve a significant doubling of the final winner within the specified timeframe!

The exciting and intense currency surfing week is coming to a close, and pals, take a look at your trading accounts, how much profit have you made? How much have you won?

If your target plan has not been realized, don't forget about the

potential trading value and opportunities this weekend!

After all, aside from deciding how to celebrate the weekend, you can also choose to engage in currency surfing trading. However, this depends on whether you have enough Acumeta signal frequency.

What should you do if you are restricted?

This weekend, get ready with new funding options, lock in your stock profits, and transfer them via wire to prepare for your Quantitative Winners Legion membership upgrade!

The Glory of the Endgame: For the Empire We Have Built Elite members of the Quantitative Legion, please allow me to conclude today's sharing with the most sincere emotions.

We have spent a lot of time discussing strategies, algorithms, and market fluctuations—these are cold data and precise tools. But now, let's set those charts and numbers aside for a moment and talk about the ultimate purpose behind all of this.

What we pursue is the most wonderful happiness in the world, a happiness that only money can bring.

The joy of having control over your time, the freedom to spend, and the ability to fulfill your pursuit of a high-quality life. This is not an empty dreams, it is a promise we deliver to you through our victories with quantitative strategies.

It is reflected in your ability to provide the best education environment for your children;

It is reflected in your ability to ensure your elderly family members live a dignified, respectful life in retirement;

It is reflected in the social status symbols you earn.

My friends, what you are doing is not just earning money for yourselves, you are creating the surplus for your family, laying the foundation for the future inheritance!

The TV series (Yellowstone) accurately depicts the harsh reality of wealth inheritance. The inheritance of each generation and the defense of family wealth are filled with competition, sacrifice, wisdom, and ruthless decisions.

Every member of our Quantitative Winners Legion, you are defending the economic territory of your families!

Let us transform the victories of this week into a force that will illuminate next week, the Q4 Crypto Ode to Joy, and the wealth road for the next 5 years. May your life shine as brightly as champagne spraying in the air, and may your weekend be filled with the power and fragrance of a lit cigar.

Next Monday, we will continue to march forward together, continuing to write the legend that belongs to our legion!
